Practice Masters Levels A, B, and C

To jump to a location in this book

1. Click a bookmark on the left.

To print a part of the book

1. Click the Print button.

2. When the Print window opens, type in a range of pages to print.

The page numbers are displayed in the bar at the bottom of the document. In the example below, “1 of 151” means that the current page is page 1 in a file of 151 pages.
For Exercises 1–3, refer to the figure at the right.

1. Name all the segments in the rectangle.  
   ________________________________

2. Name the rays that form \( \angle D \).  
   ________________________________

3. Name each of the angles in the rectangle using three different methods.  
   ________________________________

For Exercises 4–6, use the space provided to neatly draw and label the figure described. Use a straightedge.

4. a ray with endpoint \( Q \) that goes through point \( M \)  
   ________________________________

5. \( \angle PAN \)  
   ________________________________

6. \( \overline{RS} \)  
   ________________________________

State whether each object could best be modeled by a point, a line, or a plane.

7. a laser  ________________________________  8. the top of your desk  ________________________________  

9. a town on a map  ________________________________  10. a sidewalk intersection  ________________________________

For Exercises 11–12, refer to the figure at the right.

11. Name three collinear points.  
    ________________________________

12. Name a point in the interior of \( \angle ACD \).  
    ________________________________

Classify each statement as true or false, and explain your reasoning in each false case.

13. In geometry, a postulate is a statement which can be proven.  
    ________________________________

14. Two lines can intersect at more than one point.  
    ________________________________
Lesson 1.1

Level A

1. \( \overrightarrow{AB}, \overrightarrow{BC}, \overrightarrow{CD}, \overrightarrow{AD} \)
2. \( \overrightarrow{DC}, \overrightarrow{DA} \)
3. \( \angle 1, \angle BAD, \angle DAB; \angle 2, \angle ABC, \angle CBA; \angle 3, \angle BCD, \angle DCB; \angle 4, \angle ADC, \angle CDA \)
4. drawing of a ray with endpoint at \( Q \)
5. drawing of an angle with vertex at \( A \)
6. \( \overrightarrow{RS} \)
7. ray ("line" is acceptable)
8. plane
9. point
10. line
11. \( A, C, B \)
12. \( E \)
13. False; Postulates are statements that are accepted as true without proof.
14. False; Two lines intersect only at one point.

Lesson 1.1

Level B

1. \( L \)
2. \( \angle JIG, \angle GIK, \angle HIK, \angle JIH \)
3. \( G, I, \) and \( H, \) or \( J, I, \) and \( K \)
4. one
5. False; A line contains an infinite number of points.
6. True
7. True
8. answers may vary: sample answer—the tip of your pencil
9. answers may vary: sample answer—the intersection of the wall and the ceiling in your classroom
10. Check student’s drawings.
11. Check student’s drawings.
12. Check student’s drawings.
13. \( \overrightarrow{PO}, \overrightarrow{PI}, \overrightarrow{PN}, \overrightarrow{PT}, \overrightarrow{OI}, \overrightarrow{ON}, \overrightarrow{OT}, \overrightarrow{IN}, \overrightarrow{IT}, \overrightarrow{NT} \)
14. False
15. 8, 2 from each of \( O, I, N, \) and 1 from each of \( P \) and \( T. \)

Lesson 1.1

Level C

1. 15
2. \( A, C, B \)
3. vertex
4. \( B \) and \( V, S \) and \( B \)
5. two
6. true
7. \( S \)
8. Check student’s drawings.
9. Check student’s drawings.
10. False, a line is considered undefined.
11. False, \( \overrightarrow{AB} \) is the same as \( \overrightarrow{AC} \).
12. False, three planes can intersect at 0, 2, or 3 lines.
13. False, three points are needed to name a plane.
14. True, if two points are in a plane, then the segment that contains those points must also be in the plane.
For Exercises 1–4, refer to the figure at the right.

1. Name a point in the interior of \( \angle JIG \).
2. Name four angles in the figure:
   
3. Name three collinear points in the figure:
4. How many different planes contain points \( H, I, \) and \( M \)?

Classify each statement as true or false, and explain your reasoning in each false case.

5. One line contains exactly two points.
6. The intersection of two planes is a line.
7. Three lines can intersect at more than one point.

Name a familiar object that can be modeled by each of the following:

8. a point
9. a line

Use the space provided to neatly draw and label the figure described. Use a straightedge.

10. \( \angle POR \)
11. \( \overline{KL} \)
12. 2 lines that intersect at \( P \)

For Exercises 13–15, refer to the figure at the right.

13. Name three segments in the figure.
14. True or False: \( \overrightarrow{ON} \) is the same as \( \overrightarrow{NO} \).
15. How many different rays can be named in the figure?
Answers

Lesson 1.1
Level A

1. \(AB, BC, CD, AD\)
2. \(DC, DA\)
3. \(\angle 1, \angle BAD, \angle DAB; \angle 2, \angle ABC, \angle CBA; \angle 3, \angle BCD, \angle DCB; \angle 4, \angle ADC, \angle CDA\)
4. drawing of a ray with endpoint at \(Q\)
5. drawing of an angle with vertex at \(A\)
6. \(\overline{RS}\)
7. ray (“line” is acceptable)
8. plane
9. point
10. line
11. \(A, C, B\)
12. \(E\)
13. False; Postulates are statements that are accepted as true without proof.
14. False; Two lines intersect only at one point.

Lesson 1.1
Level C

1. 15
2. \(A, C, B\)
3. vertex
4. \(B\) and \(V, S\) and \(B\)
5. two
6. true
7. \(S\)
8. Check student’s drawings.
9. Check student’s drawings.
10. False, a line is considered undefined.
11. False, \(\overrightarrow{AB}\) is the same as \(\overrightarrow{AC}\).
12. False, three planes can intersect at 0, 1, 2, or 3 lines.
13. False, three points are needed to name a plane.
14. True, if two points are in a plane, then the segment that contains those points must also be in the plane.
For Exercises 1–3, refer to the figure at the right.

1. How many angles appear in the figure? ____
2. Name three collinear points. __________
3. C is called the ____ of the angles.

For Exercises 4–7, refer to the figure at the right.

4. Name two pairs of points that are coplanar with point A.

5. How many planes in the figure contain line m?

6. True or False: \( \overline{ST} \) and line \( n \) are coplanar. ____
7. Name the intersection of \( n \) and \( \overline{ST} \). __________

For Exercises 8–9, use the space provided to neatly draw and label the figure described.
Use a straightedge.

8. two planes that intersect at line \( l \) ______
9. a plane that contains \( \angle QRS \) ______

For Exercises 10–14, classify each statement as true or false, and explain your reasoning.

10. A line can be defined as a perfectly straight figure that extends forever. __________
11. If points \( A, B, \) and \( C \) are collinear, then \( \overline{AB} \) is the same as \( \overline{AC} \). __________
12. Three planes must intersect each other at exactly two lines. __________
13. Two points can name a plane. __________
14. If \( X \) and \( Y \) are in plane \( Q \), then \( \overline{XY} \) is in plane \( Q \). __________
Answers

Lesson 1.1
Level A

1. \( AB, BC, CD, AD \)
2. \( \overrightarrow{DC}, \overrightarrow{DA} \)

3. \( \angle 1, \angle BAD, \angle DAB; \angle 2, \angle ABC, \angle CBA; \angle 3, \angle BCD, \angle DCB; \angle 4, \angle ADC, \angle CDA \)

4. drawing of a ray with endpoint at Q
5. drawing of an angle with vertex at A
6. \( \overline{RS} \)
7. ray (“line” is acceptable)
8. plane
9. point
10. line
11. A, C, B
12. E

13. False; Postulates are statements that are accepted as true without proof.
14. False; Two lines intersect only at one point.

Lesson 1.1
Level C

1. 15
2. A, C, B
3. vertex
4. B and V, S and B
5. two
6. true
7. S
8. Check student’s drawings.
9. Check student’s drawings.
10. False, a line is considered undefined.
11. False, \( \overrightarrow{AB} \) is the same as \( \overrightarrow{AC} \).
12. False, three planes can intersect at 0, 1, 2, or 3 lines.
13. False, three points are needed to name a plane.
14. True, if two points are in a plane, then the segment that contains those points must also be in the plane.

Lesson 1.1
Level B

1. \( L \)
2. \( \angle JIG, \angle GIK, \angle HIK, \angle JIH \)
4. one
5. False; A line contains an infinite number of points.
6. True
7. True
8. answers may vary: sample answer—the tip of your pencil
9. answers may vary: sample answer—the intersection of the wall and the ceiling in your classroom
10. Check student’s drawings.
11. Check student’s drawings.
12. Check student’s drawings.
13. \( PO, PI, PN, PT, OI, ON, OT, IN, IT, NT \)
14. False
15. 8, 2 from each of O, I, N, and 1 from each of P and T.
For Exercises 1–3, find the lengths determined by the points on the number line.

1. HI
2. GI
3. EG

4. On the number line below, plot points A and B so that \(AB = 4\).

In Exercises 5–7, point A is between points C and T on \(\overline{CT}\). Sketch each figure and find the missing lengths.

5. \(CA = 12\), \(AT = 5\), \(CT = \)______

6. \(CA = 7.5\), \(AT = \)______, \(CT = 10\)

7. \(CA = \)______, \(AT = 8.7\), \(CT = 9.4\)

8. Name all congruent segments in the figure at the right.

9. Your family is driving to Texas for vacation. As you drive along I-30, a straight highway, you notice the mileage sign shown at the right. Use the sign to determine the distance between Hope, AR, and New Boston, TX.

In the number line below, \(AC = 8.1\). Find the indicated values.

10. \(x \)______
11. \(BC \)______
Lesson 1.2
Level A

1. 3
2. 7
3. 3

4. Sample answer:
   A plotted at −3 and B plotted at 1

5. 17;

6. 2.5;

7. 0.7;

8. \( \overrightarrow{FA} \cong \overrightarrow{FB} \cong \overrightarrow{FC} \cong \overrightarrow{FD} \cong \overrightarrow{FE} \)
   \( \overrightarrow{AB} \cong \overrightarrow{BC} \cong \overrightarrow{CD} \cong \overrightarrow{DE} \cong \overrightarrow{AE} \)

9. 90 miles

10. 2.7

11. 5.4

Lesson 1.2
Level B

1. 12
2. 7

3. \( R = −15 \) or \( R = −7 \); Check student’s plot.

4. \( \overrightarrow{DA} \cong \overrightarrow{DC}, \overrightarrow{EA} \cong \overrightarrow{EC}, \overrightarrow{AB} \cong \overrightarrow{BC} \)

5. 21

6. 8.8;

7. 0.33;

8. 214 miles

9. \( x = 30 \)

10. \( DC = 26 \)

11. \( CE = 65 \)

12. \( x = 7 \)

13. \( CI = 28 \)

14. \( IJ = 32 \)

Lesson 1.2
Level C

1. 57

2. 55

3. \( R \) could be located at 4 or −82; Check student’s plot.

4. \( \overrightarrow{CD} \cong \overrightarrow{EF} \cong \overrightarrow{GH} \)

5. \( \overrightarrow{EA} \cong \overrightarrow{EB} \cong \overrightarrow{EC} \cong \overrightarrow{FD}, \)
   \( \overrightarrow{AB} \cong \overrightarrow{BC} \cong \overrightarrow{CD} \cong \overrightarrow{AD} \)

6. \( 15 \frac{1}{3} \)

7. 213.4 miles

8. \( x = 12 \)

9. \( CE = 21 \)

10. \( CD = 53 \)

11. \( x = 23 \)

12. \( RS = 55 \)

13. \( ST = 77 \)

14. \( RT = 132 \)

Lesson 1.3
Level A

1. \( \approx 30° \)

2. \( \approx 140° \)

3. \( \approx 90° \)
For Exercises 1–4, find the lengths determined by the points on the number line.

1. \(BC\) 

2. \(AB\) 

3. Point \(R\) is not shown. If \(BR = 4\), locate and plot the possible coordinates of \(R\). 

For Exercises 4–5, use the figure at the right.

4. Name all congruent segments in the figure.

5. If \(EB\) is 1.5 times greater than \(ED\), find \(EB\).

Point \(R\) is between points \(A\) and \(T\) on \(AT\). Sketch a figure for each set of values, and find the missing lengths.

6. \(AR = \ldots\), \(RT = 42.5\), \(AT = 51.3\)

7. \(AR = 0.39\), \(RT = \ldots\), \(AT = 0.72\)

8. When you left your home in Memphis, TN, this morning, your odometer read “11,279”. You are traveling along a straight highway to Nashville, TN. You are now in Jackson, TN, and you see a sign that says “Nashville-128 miles”. Your odometer now reads “11,365”. Use this information to find the distance between Memphis and Nashville. 

If \(DE = 91\), find the indicated values.

9. \(x\) 

10. \(DC\) 

11. \(CE\) 

If \(CJ = 60\), find the indicated values.

12. \(x\) 

13. \(CI\) 

14. \(IJ\)
Lesson 1.2

Level A

1. 3
2. 7
3. 3

4. Sample answer:
   A plotted at −3 and B plotted at 1

5. 17;
   \[ \begin{array}{ccc}
   & C & A & T \\
   & 12 & & 5 \\
   \end{array} \]

6. 2.5;
   \[ \begin{array}{ccc}
   & C & A & T \\
   & 7.5 & & 10 \\
   \end{array} \]

7. 0.7;
   \[ \begin{array}{ccc}
   & C & A & T \\
   & 9.4 & & 8.7 \\
   \end{array} \]

8. \( \frac{FA}{AB} \approx \frac{FB}{BC} \approx \frac{FC}{FD} \approx \frac{FD}{FE} \)

9. 90 miles

10. 2.7
11. 5.4

Lesson 1.2

Level C

1. 57
2. 55

3. R could be located at 4 or −82; Check student’s plot.

4. \( \overline{CD} \cong \overline{EF} \cong \overline{GH} \)

5. \( \frac{EA}{AB} \cong \frac{EB}{BC} \cong \frac{EC}{CD} \cong \frac{ED}{AD} \)

6. \( \frac{1}{3} \)

7. 213.4 miles

8. \( x = 12 \)
9. \( CE = 21 \)
10. \( CD = 53 \)
11. \( x = 23 \)
12. \( RS = 55 \)
13. \( ST = 77 \)
14. \( RT = 132 \)

Lesson 1.3

Level A

1. \( \approx 30^\circ \)
2. \( \approx 140^\circ \)
3. \( \approx 90^\circ \)
For Exercises 1–4, find the lengths determined by the points on the number line.

1. CE  
2. EH  
3. If DR = 43, locate and plot the possible coordinates of R.  
4. Name the congruent segments on the number line.

For Exercises 5–6, use the figure at the right.

5. Name all congruent segments in the figure.  
6. If AE is 1.5 times greater than AD, find AD.

7. When you left your home in Memphis, TN, this morning, your odometer read “28,974.6”. You are traveling along a straight highway to Nashville, TN. You are now in Jackson, TN, and you see a sign that says “Nashville - 128 miles”. Your odometer now reads “29,060”. Use this information to find the distance between Memphis and Nashville.

If CD = 5x – 7, find the indicated values.

8. x   
9. CE   
10. CD  

If the ratio of \( \frac{RS}{ST} = \frac{5}{7} \), find the indicated values.

11. x   
12. RS  
13. ST  
14. RT  

Lesson 1.2
Level A
1. 3
2. 7
3. 3

4. Sample answer:
   A plotted at -3 and B plotted at 1

5. 17;
   \[ \square \quad \quad \quad \quad \quad \square \]
6. 2.5;
   \[ \square \quad \quad \quad \quad \quad \square \]
7. 0.7;
   \[ \square \quad \quad \quad \quad \quad \square \]

8. \[ \frac{FA}{AB} = \frac{FB}{BC} = \frac{FC}{FD} = \frac{FD}{FE} \]
   \[ \frac{AB}{BC} = \frac{CD}{DE} = \frac{AE}{EF} \]

9. 90 miles
10. 2.7
11. 5.4

Lesson 1.2
Level B
1. 12
2. 7

3. \( R = -15 \) or \( R = -7 \); Check student’s plot.

4. \[ \overline{DA} \cong \overline{DC}, \overline{EA} \cong \overline{EC}, \overline{AB} \cong \overline{BC} \]

5. 21

6. 8.8;
   \[ \square \quad \quad \quad \quad \quad \square \]

7. 0.33;
   \[ \square \quad \quad \quad \quad \quad \square \]

8. 214 miles
9. \( x = 30 \)
10. \( DC = 26 \)
11. \( CE = 65 \)
12. \( x = 7 \)
13. \( CI = 28 \)
14. \( IJ = 32 \)

Lesson 1.2
Level C
1. 57
2. 55

3. \( R \) could be located at 4 or \(-82\); Check student’s plot.

4. \[ \overline{CD} \cong \overline{EF} \cong \overline{GH} \]

5. \[ \frac{EA}{AB} \cong \frac{EB}{BC} \cong \frac{EC}{CD} \cong \frac{ED}{AD} \]

6. \( 15 \frac{1}{3} \)

7. 213.4 miles
8. \( x = 12 \)
9. \( CE = 21 \)
10. \( CD = 53 \)
11. \( x = 23 \)
12. \( RS = 55 \)
13. \( ST = 77 \)
14. \( RT = 132 \)

Lesson 1.3
Level A
1. \( \approx 30^\circ \)
2. \( \approx 140^\circ \)
3. \( \approx 90^\circ \)
Practice Masters Level A
1.3 Measuring Angles

For Exercises 1–3, use a protractor to find the measures of the indicated angles. You may extend the rays if necessary.

1. \( m \angle K = \) ________
2. \( m \angle Q = \) ________
3. \( m \angle Z = \) ________

For Exercises 5–6, use a protractor to sketch an angle of the indicated size. Be sure to label your angle.

4. \( m \angle PAN = 52^\circ \)
5. \( m \angle ROX = 160^\circ \)

For Exercises 6–8, classify each statement as true or false, and explain your reasoning in each false case.

6. If two angles are complementary, then they form a linear pair. __________________________
7. Supplementary angles are always congruent. __________________________
8. Two acute angles can be complementary. __________________________

For Exercises 9–11, refer to the figure at the right.

9. If \( m \angle PAQ = 28^\circ \), find \( m \angle QAR \). __________________________
10. If \( m \angle XAP = 56^\circ \), find \( m \angle XAR \). __________________________
11. Name three pairs of supplementary angles in the figure.
____________________________

In the figure at the right, \( m \angle EAI = x + 15 \), and \( m \angle IAO = x - 11 \).

12. Find \( x \). __________________________
13. Find \( m \angle EAI \). ________
14. Find \( m \angle IAO \). ________
15. \( \angle EAI \) and \( \angle IAO \) are called ________________________ angles.
Lesson 1.2
Level A
1. 3
2. 7
3. 3
4. Sample answer:
   A plotted at -3 and B plotted at 1
5. 17;
6. 2.5;
7. 0.7;
8. \( \overline{FA} \cong \overline{FB} \cong \overline{FC} \cong \overline{FD} \cong \overline{FE} \)
   \( \overline{AB} \cong \overline{BC} \cong \overline{CD} \cong \overline{DE} \cong \overline{AE} \)

4. \( \overline{CD} \cong \overline{EF} \cong \overline{GH} \)
5. \( \overline{EA} \cong \overline{FB} \cong \overline{EC} \cong \overline{ED}, \)
   \( \overline{AB} \cong \overline{BC} \cong \overline{CD} \cong \overline{AD} \)
6. \( 15\overline{\frac{1}{3}} \)
7. 213.4 miles
8. \( x = 12 \)
9. \( CE = 21 \)
10. \( CD = 53 \)
11. \( x = 23 \)
12. \( RS = 55 \)
13. \( ST = 77 \)
14. \( RT = 132 \)

Lesson 1.3
Level A
1. \( \approx 30^\circ \)
2. \( \approx 140^\circ \)
3. \( \approx 90^\circ \)
Answers

4. Check student’s drawings.
5. Check student’s drawings.
6. False, if two angles are supplementary, they (sometimes) form a linear pair.
7. False, supplementary angles are only congruent if they are both right angles.
8. true
9. $62^\circ$
10. $146^\circ$
11. $\angle ZAX$ and $\angle XAR$, $\angle ZAP$ and $\angle PAR$, $\angle ZAQ$ and $\angle QAR$
12. $x = 43$
13. $58^\circ$
14. $32^\circ$
15. complementary

Lesson 1.3
Level B
1. $\approx 130^\circ$
2. $\approx 20^\circ$
3. $\approx 30^\circ$
4. $\approx 160^\circ$
5. They form a linear pair and are supplementary.
6. Sample drawing:

   ![Diagram of a quadrilateral](image)

   7. $64^\circ$
   8. $116^\circ$
   9. $45^\circ$
   10. $45^\circ$
   11. $\approx 110^\circ$ (answers may vary)
   12. $67.5^\circ$
   13. $x = 6$
   14. $105^\circ$
   15. $27^\circ$
   16. $132^\circ$
   17. $x = 7$
   18. $90^\circ$
   19. $61^\circ$
   20. $29^\circ$

Lesson 1.3
Level C
1. The drawing should be a quadrilateral.
2. $106^\circ$
3. $40^\circ$
4. $34^\circ$
5. $146^\circ$
6. $74^\circ$
7. $140^\circ$
8. $180^\circ$, $360^\circ$; Sample pattern: The sum of the exterior angles is double that of the sum of the interior angles.
9. $x = 11$
10. $49^\circ$
11. $131^\circ$
12. $180^\circ$
13. They form a linear pair and they are supplementary.
14. $37.5^\circ$
15. $78.75^\circ$
For Exercises 1–4, use a protractor to find the measures of the indicated angles. You may extend the rays if necessary.

1. \( m\angle CAD \)  
2. \( m\angle CDA \)  
3. \( m\angle ACD \)  
4. \( m\angle CDE \)  

5. In the figure above, what is the relationship between \( \angle CDE \) and \( \angle CDA \)?  
6. Draw a figure where \( m\angle ABC = 115^\circ \) and \( m\angle DBC = 55^\circ \).

7. \( m\angle BAT = \)  
8. \( m\angle TAZ = \)  

If \( \angle BAT \) and \( \angle TAZ \) form a linear pair and \( m\angle BAT = 5x - 6 \), and \( m\angle TAZ = 7x + 18 \), find the measure of each angle.

9. \( m\angle BAT = \)  
10. \( m\angle TAZ = \)  

If \( \angle LFO \cong \angle EFR \), find the measures of the indicated angles.

9. \( m\angle LFO = \)  
10. \( m\angle EFR = \)  

11. What is the angle between the minute and hour hands on a clock at 2:30?  
12. An angle has measure 3 times that of its complement. What is the measure of the angle?  

In the figure at the left, \( m\angle MAN = 17x + 3 \), \( m\angle MAL = 9(x - 3) \), and \( m\angle NAL = 3(7x + 2) \).

13. Find \( x \).  
14. Find \( m\angle MAN \).  
15. Find \( m\angle MAL \).  
16. Find \( m\angle NAL \).

Use the figure at the right to find the indicated measures.

17. \( x \)  
18. \( m\angle EBG \)  
19. \( m\angle EBF \)  
20. \( m\angle GBF \)
Answers

4. Check student’s drawings.

5. Check student’s drawings.

6. False, if two angles are supplementary, they (sometimes) form a linear pair.

7. False, supplementary angles are only congruent if they are both right angles.

8. true

9. 62°

10. 146°

11. \( \angle ZAX \) and \( \angle XAR \), \( \angle ZAP \) and \( \angle PAR \), \( \angle ZAQ \) and \( \angle QAR \)

15. measurements will vary, but should be about the same as Exercise 14

16. measurements will vary, but should be about the same as Exercise 14 and Exercise 15

17. The three measurements are equal.

**Lesson 1.4**

**Level C**

1. \(\overline{DC} \cong \overline{DA}, \overline{BC} \cong \overline{BA}, \overline{EC} \cong \overline{EA}\)

2. \(\overline{DC} \cong \overline{DA}\) and \(\overline{BC} \cong \overline{BA}\) because \(B\) and \(D\) lie on the perpendicular bisector of \(\overline{AB}\); \(\overline{EC} \cong \overline{EA}\) since \(\overline{BD}\) is the perpendicular bisector of \(\overline{AB}\).

3. \(\angle CDB \cong \angle ADB; \angle CBD \cong \angle ABD\); all angles at \(E\) are congruent. Sample reason: The perpendicular bisector forms four right congruent angles, \(\overline{DB}\) is the angle bisector for \(\angle ADB\) and \(\angle CDB\).

4. Construct \(\overline{RS}\), then construct the perpendicular bisector of \(\overline{RS}\). Mark point \(T\) on the perpendicular bisector, then fold over \(\overline{RS}\) to find \(U\).
For Exercises 1–3, use the figure at the right to complete the following statements.

1. $BD$ is called the __________________________ of $\angle ABC$.

2. If $m\angle CBD = 37^\circ$, then $m\angle ABC = \underline{\hspace{2cm}}$

3. $CD$ and $AD$ are __________________________

If $AB = 9x - 1$, and $AC = 3x + 7$, find the following:

4. $x \underline{\hspace{2cm}}$

5. $AC \underline{\hspace{2cm}}$

6. $CB \underline{\hspace{2cm}}$

7. $AB \underline{\hspace{2cm}}$

Construct all the geometric figures below by folding a sheet of paper.

8. Describe how to construct line $l$ through $A$ and $B$.

9. Describe how to construct two lines perpendicular to line $l$: line $m$ through point $A$ and line $n$ through point $B$.

10. Describe how to construct point $M$, the midpoint of $AB$.

11. Describe how to construct line $t$ perpendicular to $l$ through $M$.

12. Write a conjecture about the relationship between lines $m$, $t$, and $n$. 

```
16. $x = 6$
17. $39^\circ$
18. $66^\circ$
19. $105^\circ$
20. $144^\circ$

**Lesson 1.4**

**Level A**

1. angle bisector
2. $74^\circ$
3. congruent
4. $x = 5$
5. $AC = 22$
6. $CB = 22$
7. $AB = 44$
8. Fold the paper once through A and B.
9. Fold the paper through A so that line $l$ matches up with itself. This is line $m$. Fold the paper through $B$ so that line $l$ matches up with itself. This is line $n$.
10. Fold the paper so that $A$ matches up with $B$. This is point $M$.
11. Fold along $M$ so that $l$ matches up with itself.
12. Line $m$ is parallel to line $t$ which is parallel to line $n$.

**Lesson 1.4**

**Level B**

1. $\overline{EG}$
2. False
3. $\overline{GE}$ is the perpendicular bisector of $\overline{AB}$.
4. $\overline{GE}$ is the angle bisector of $\angle AGB$.

**Lesson 1.4**

**Level C**

1. $\overline{DC} \cong \overline{DA}$, $\overline{BC} \cong \overline{BA}$, $\overline{EC} \cong \overline{EA}$
2. $\overline{DC} \cong \overline{DA}$ and $\overline{BC} \cong \overline{BA}$ because $B$ and $D$ lie on the perpendicular bisector of $\overline{AB}$; $\overline{EC} \cong \overline{EA}$ since $BD$ is the perpendicular bisector of $\overline{AB}$.
3. $\angle CDB \cong \angle ADB$; $\angle CBD \cong \angle ABD$; all angles at $E$ are congruent. Sample reason: The perpendicular bisector forms four right congruent angles, $\overline{DB}$ is the angle bisector for $\angle ADB$ and $\angle CDB$.
4. Construct $\overline{RS}$, then construct the perpendicular bisector of $\overline{RS}$. Mark point $T$ on the perpendicular bisector, then fold over $\overline{RS}$ to find $U$. 

$GA = GB$ since $G$ lies on the perpendicular bisector of $\overline{AB}$.
6. $x = 8$
7. $39^\circ$
8. $78^\circ$
9. $33$
10. $33$
11. $66$
12. folded segments $RS$, $ST$, and $RT$
13. The perpendicular bisectors intersect at the same point.
14. measurements will vary
15. measurements will vary, but should be about the same as Exercise 14
16. measurements will vary, but should be about the same as Exercise 14 and Exercise 15
17. The three measurements are equal.
Use the figure at the right for Exercises 1–11.

1. The distance from $G$ to $\overline{AB}$ is ______________________

2. True or False: $CG = DG$ ______________________

3. Describe the relationship between $\overline{GE}$ and $\overline{AB}$.
   ______________________

4. Describe the relationship between $\overline{GE}$ and $\angle AGB$.
   ______________________

5. Explain why $GA = GB$. ______________________

If $m\angle AGE = 5x - 1$, $m\angle AGB = 9x + 6$, and $AE = 3x + 9$, find the following measurements:

6. $x$ ______________________

7. $m\angle BGE$ ______________________

8. $m\angle AGB$ ______________________

9. $AE$ ______________________

10. $EB$ ______________________

11. $AB$ ______________________

Construct all of the geometric figures below by folding a sheet of paper.

12. Fold three lines, the first containing $R$ and $S$, the second containing $S$ and $T$, and the third containing $R$ and $T$.

13. Construct the perpendicular bisectors of $\overline{RS}$, $\overline{ST}$, and $\overline{RT}$. What do you notice about the lines you just constructed?
   ______________________

Label the point where the bisectors intersect as $X$. Carefully measure the following distances:

14. $XS$ ________

15. $XR$ ________

16. $XT$ ________

17. What do you notice about the measurements you made in Exercises 14–16? ______________________
Lesson 1.4

**Practice Masters Level C**

**1.4 Exploring Geometry by Using Paper Folding**

Use paper folding and the figure at the right for Exercises 1–3. Put marks on the figure to indicate $DB$ is the perpendicular bisector of $AC$.

1. Name all pairs of congruent segments. 

2. Describe why each pair of segments from Exercise 1 is congruent.

3. Which angles do you think are congruent? Why?

In Exercise 4–5, construct the geometric figures below by folding a sheet of paper.

4. Describe how to construct two segments, $RS$ and $TU$, so that each segment is the perpendicular bisector of the other, and $TU$ is longer than $RS$.

5. Connect the endpoints of $RS$ to the endpoints of $TU$, then measure the segments formed. What do you notice?

6. Find the error in the figure at the right assuming $AB = 14x$. Explain your answer.

In the figure at the right, $AT$ is the angle bisector of $\angle MAN$. Find the following:

7. $x$ 

8. $m\angle MAT$ 

9. $m\angle MAN$ 

10. Explain why $MT = NT$. 

11. Sketch $MN$ on the figure. How are $MN$ and $AT$ related?
16. \( x = 6 \)
17. \( 39^\circ \)
18. \( 66^\circ \)
19. \( 105^\circ \)
20. \( 144^\circ \)

**Lesson 1.4**

**Level A**

1. angle bisector
2. \( 74^\circ \)
3. congruent
4. \( x = 5 \)
5. \( AC = 22 \)
6. \( CB = 22 \)
7. \( AB = 44 \)
8. Fold the paper once through A and B.
9. Fold the paper through \( A \) so that line \( l \) matches up with itself. This is line \( m \). Fold the paper through \( B \) so that line \( l \) matches up with itself. This is line \( n \).
10. Fold the paper so that \( A \) matches up with \( B \). This is point \( M \).
11. Fold along \( M \) so that \( l \) matches up with itself.
12. Line \( m \) is parallel to line \( t \) which is parallel to line \( n \).

**Lesson 1.4**

**Level B**

1. \( GE \)
2. False
3. \( \overleftrightarrow{GE} \) is the perpendicular bisector of \( AB \).
4. \( \overleftrightarrow{GE} \) is the angle bisector of \( \angle AGB \).
5. \( GA = GB \) since \( G \) lies on the perpendicular bisector of \( AB \).
6. \( x = 8 \)
7. \( 39^\circ \)
8. \( 78^\circ \)
9. \( 33 \)
10. \( 33 \)
11. \( 66 \)
12. folded segments \( RS, ST, \) and \( RT \)
13. The perpendicular bisectors intersect at the same point.
14. measurements will vary
15. measurements will vary, but should be about the same as Exercise 14
16. measurements will vary, but should be about the same as Exercise 14 and Exercise 15
17. The three measurements are equal.

**Lesson 1.4**

**Level C**

1. \( DC \equiv \overline{DA}, BC \equiv \overline{BA}, EC \equiv \overline{EA} \)
2. \( DC \equiv \overline{DA} \) and \( BC \equiv \overline{BA} \) because \( B \) and \( D \) lie on the perpendicular bisector of \( \overline{AB} \); \( EC \equiv \overline{EA} \) since \( BD \) is the perpendicular bisector of \( AB \).
3. \( \angle CDB \cong \angle ADB; \angle CBD \cong \angle ABD \); all angles at \( E \) are congruent. Sample reason: The perpendicular bisector forms four right congruent angles, \( DB \) is the angle bisector for \( \angle ADB \) and \( \angle CDB \).
4. Construct \( RS \), then construct the perpendicular bisector of \( RS \). Mark point \( T \) on the perpendicular bisector, then fold over \( RS \) to find \( U \).
5. $RU \cong US \cong ST \cong TR$

6. Since $x = 6$, $AC \neq BC$.

7. $x = 7.5$

8. $34^\circ$

9. $68^\circ$

10. The distances from a point on the angle bisector to the sides or the angle are equal.

11. $\overline{AT}$ is the perpendicular bisector of $\overline{MN}$.

Lesson 1.5
Level A

1. obtuse: outside the triangle
   right: midpoint of the hypotenuse
   acute: inside the triangle

2. Check student’s drawings.

3. The drawing should be an obtuse triangle.

4. The drawing should be either a right or an acute triangle.

5. $\overline{AE}$ is a median, not an angle bisector.

6. True

7. False; it is the centroid of the triangle.

8. False; they are medians of the triangle.

9. True

Lesson 1.5
Level B

1. The drawing should be either an isosceles or equilateral triangle.

2. Check student’s drawings.

3. The drawing should be an obtuse triangle.

4. The drawing should be either a right or an acute triangle.
In Exercises 1–3, construct the circumscribed circle of each triangle.

1. 

2. 

3. 

4. What do you notice about the locations of the circumcenters you constructed in Exercises 1–3?

5. Construct the incircle of \( \triangle PQR \).

6. Construct the circle that passes through the three points below.

For Exercises 7–11, refer to the figure at the right. Classify each statement as true or false, and explain your reasoning in each false case.

7. \( \angle BAE \equiv \angle CAE \)    

8. Point \( E \) is the midpoint of \( BC \).

9. Point \( G \) is the circumcenter of \( \triangle ABC \).

10. \( FB, AE, \) and \( CD \) are altitudes of \( \triangle ABC \).

11. \( FB, AE, \) and \( CD \) are concurrent.
5. \( RU \cong US \cong ST \cong TR \)

6. Since \( x = 6 \), \( AC \neq BC \).

7. \( x = 7.5 \)

8. \( 34^\circ \)

9. \( 68^\circ \)

10. The distances from a point on the angle bisector to the sides or the angle are equal.

11. \( AT \) is the perpendicular bisector of \( MN \).

**Lesson 1.5**

**Level A**

1. obtuse: outside the triangle
   right: midpoint of the hypotenuse
   acute: inside the triangle

2. Check student’s drawings.

3. The drawing should be an obtuse triangle.

4. The drawing should be either a right or an acute triangle.

5. \( \overline{AT} \) is the perpendicular bisector of \( MN \).

6. False; \( \overline{AE} \) is a median, not an angle bisector.

7. True

8. False; it is the centroid of the triangle.

9. False; they are medians of the triangle.

10. True

**Lesson 1.5**

**Level B**

1. The drawing should be either an isosceles or equilateral triangle.

2. Check student’s drawings.

3. The drawing should be an obtuse triangle.

4. The drawing should be either a right or an acute triangle.
Practice Masters Level B

1.5 Special Points in Triangles

Each of the following statements is true sometimes. In the space provided, sketch an example of when the statement is true, and an example of when it is false. Be sure to label your drawings.

Statement: In \( \triangle ABC \), the bisector of \( \angle A \) is perpendicular to \( BC \).

1. True example
2. False example

Statement: The circumcenter of \( \triangle RAT \) is outside of the triangle.

3. True example
4. False example

5. A portion of a circle is shown at the right. Choose three points on the circle and draw a triangle to connect them. Then construct the circumscribed circle around the triangle to complete the figure.

Trace the given figures on folding paper. Then construct the indicated geometric figures.

6. Construct the circumcircle of both \( \triangle BCD \) and \( \triangle EFG \).

7. Construct the medians and incircle of \( \triangle ABC \).
Answers

5. $RU \cong US \cong ST \cong TR$

Level C

1-2.

3. Translation

4. approximately 2.3cm

5. approximately 4.6cm

6. The distance between the image and the preimage should be twice the distance between the lines.

7. See answer for Exercise 7.

9. Rotation

10. approximately 110°
Using the figure at the right, reflect FLAG as directed. Trace the figure onto tracing paper if necessary.

1. Reflect FLAG over line \( m \). Label the image \( F'L'A'G' \).
2. Reflect your figure from Exercise 1 over line \( n \). Label the image \( F''L''A''G'' \).
3. Identify the transformation relating \( \text{FLAG} \) to \( F''L''A''G'' \).

4. Measure the distance between lines \( n \) and \( m \). _________
5. Measure the distance between \( F \) and \( F'' \). _________________________________
6. How are the distances in Exercise 4 and Exercise 5 related? _________________________________

Using the figure at the right, reflect PORT as directed. Trace the figure onto tracing paper if necessary.

7. Reflect PORT over line \( m \). Label the image \( P'O'R'T' \).
8. Reflect your figure from Exercise 7 over line \( n \). Label the image \( P''O''R''T'' \).
9. Identify the transformation relating PORT to \( P''O''R''T'' \).

10. Measure \( \angle OCO'' \). _________________________________
11. Measure the acute angle formed by lines \( n \) and \( m \). _________________________________
12. How are the angle measures in Exercise 10 and Exercise 11 related? _________________________________

For Exercises 13–16, use the figure at the right.

13. Reflect \( \triangle ABC \) over line \( t \).
14. Reflect your image from Exercise 13 over line \( r \).
15. Reflect your image from Exercise 14 over line \( s \).
   Label this final image as \( DEF \).
16. Identify the transformation relating \( \triangle ABC \) to \( \triangle DEF \). _________________________________
**Answers**

9. \[ \triangle ABC \rightarrow \triangle A'B'C' \]

10. True

11. False; This is true for a reflection by a translation.

12. True

**Lesson 1.6**

**Level B**

1. Sample answer: the image you see in a mirror

A diagonal of a polygon is a line segment that connects non-adjacent vertices of the polygon. A polygon can be separated into triangles by drawing all possible diagonals from one vertex. Draw the diagonals that will separate the following polygons into triangles, then record your results in the table at the right. Exercise 2 demonstrates how to draw the diagonals.

<table>
<thead>
<tr>
<th>Number of sides</th>
<th>Number of triangles</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>5</td>
<td></td>

<tr>
<td>6</td>
<td></td>
</tr>
<tr>
<td>7</td>
<td></td>
</tr>
<tr>
<td>8</td>
<td></td>
</tr>
</tbody>
</table>

7. What is the pattern? ____________

8. If this pattern continues, into how many triangles can a polygon with 10 sides be separated? ____________

9. Write an expression for the number of triangles that can be drawn in a polygon with \( n \) sides. ____________

The figure at the right was constructed by reflecting point \( C \) over line \( l \), then drawing the segments between points \( A, C, \) and \( C' \). A student wrote a conjecture stating that \( \triangle ACC' \) is an isosceles triangle. Use this figure for Exercises 10–12.

10. Test the conjecture by measuring \( AC \) and \( AC' \).

\[ AC = \quad \quad AC' = \quad \quad \]

11. Do you think the student’s conjecture is correct? Why or why not? ____________

Logical arguments that ensure true conclusions are called proofs.

12. Write another conjecture about the figure. Explain how you could prove your conjecture is true.

__________
Lesson 2.1
Level A

1–6. The number of triangles is two fewer than the number of sides.

7. The number of triangles is two fewer than the number of sides.

8. 8

9. number of triangles = n − 2

10. Measurements will vary, but they should be equal. AC ≈ 2.4 cm, AC' ≈ 2.4 cm

11. The student’s conjecture is correct. Explanations will vary. Sample answer: Because AC is congruent to AC'.

12. Conjectures will vary. Sample answer: The base angles of an isosceles triangle are congruent. To prove this conjecture, show base angles are congruent.

Lesson 2.1
Level B

1–4. Check student’s drawings.

5. Descriptions may vary. Sample pattern: The difference in the number of diagonals from one figure to the next keeps increasing by one.

6. 35

7. Number of diagonals = \( \frac{n(n - 3)}{2} \)

8. AX, BX, CX, DX, AC, BD, and all angles whose vertex is X. AX = BX = CX = DX = 2.1 cm; AC = 4.2 cm; BD = 4.2 cm; \( \angle AXD = \angle BXC = 110^\circ; \) \( \angle AXB = \angle DXC = 70^\circ \)

9. The student’s conjecture is incorrect. The diagonals are bisectors of each other, but not perpendicular.

10. Conjectures and proofs will vary. Sample answer: The diagonals are congruent. Show that \( \overline{AX} \) is congruent to \( \overline{XC} \).

Lesson 2.1
Level C

1. Number of Sides | Number of Triangles
--- | ---
3 | 1
4 | 2
5 | 3
6 | 4
7 | 5
8 | 6
9 | 7

2. The units digit in Column A is 2, column B is 4, column C is 8, and column D is 6.

3. Column C

4. To show that the statement will be true at all times.

5. Descriptions may vary. Sample answer: Construct the diagonals of the parallelogram and the point where they intersect. Measure the distances from the intersection point to each of the vertices of the parallelogram. If this statement is true, the distance on each diagonal should be equal.

6. 26

7. 27; Sample answer: Add one red cube to the 26 green cubes to get the total number of small cubes in this large cube.
A diagonal of a polygon is a line segment that connects non-adjacent vertices of the polygon. How many diagonals can be drawn in a polygon that has 3, 4, 5, or 6 vertices? Draw them. Record your data in the table.

<table>
<thead>
<tr>
<th>Number of sides</th>
<th>Number of diagonals</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>0</td>
</tr>
<tr>
<td>4</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td></td>
</tr>
</tbody>
</table>

5. What is the pattern? ____________________________

6. If this pattern continues, how many diagonals can be drawn in a polygon with 10 sides? ____________________________

7. Write an expression for the number of diagonals that can be drawn in a polygon with \( n \) sides. ____________________________

A student wrote a conjecture about the figure at the right stating that the diagonals of a rectangle are perpendicular bisectors of each other.

8. What measurements could you make to test this conjecture? Label and record your measurements in the space provided:
   ____________________________
   ____________________________

9. Do you think the student’s conjecture is correct? Why or why not? ____________________________

10. Write another conjecture about the figure. ____________________________
    Explain how you could prove your conjecture is true.
    ____________________________
    ____________________________
    ____________________________
Lesson 2.1

Level A

1–6. | Number of Sides | Number of Triangles |
<table>
<thead>
<tr>
<th></th>
<th></th>

<td>7</td>
</tr>
</tbody>
</table>

7. The number of triangles is two fewer than the number of sides.

8. 8

9. number of triangles = \( n - 2 \)

10. Measurements will vary, but they should be equal. \( AC \approx 2.4 \text{ cm}, AC' \approx 2.4 \text{ cm} \)

11. The student’s conjecture is correct. Explanations will vary. Sample answer: Because \( AC \) is congruent to \( AC' \).

12. Conjectures will vary. Sample answer: The base angles of an isosceles triangle are congruent. To prove this conjecture, show base angles are congruent.

Lesson 2.1

Level B

1–4. Check student’s drawings.

<table>
<thead>
<tr>
<th>Number of Sides</th>
<th>Number of Diagonals</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>0</td>
</tr>
<tr>
<td>4</td>
<td>2</td>

</tr>
</tbody>
</table>

2. The units digit in Column A is 2, column B is 4, column C is 8, and column D is 6.

3. Column C

4. To show that the statement will be true at all times.

5. Descriptions may vary. Sample answer: Construct the diagonals of the parallelogram and the point where they intersect. Measure the distances from the intersection point to each of the vertices of the parallelogram. If this statement is true, the distance on each diagonal should be equal.

6. 26

7. 27; Sample answer: Add one red cube to the 26 green cubes to get the total number of small cubes in this large cube.
Practice Masters Level C

2.1 An Introduction to Proofs

Use the table to answer Exercises 1–5. The numbers in the table are the powers of 2: \(2^1 = 2, 2^2 = 4, 2^3 = 8, \ldots\)

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>4</td>
<td>8</td>
<td>16</td>
</tr>
<tr>
<td>32</td>
<td>64</td>
<td>128</td>
<td>256</td>
</tr>
</tbody>
</table>

1. Fill in the missing entries in the table.

2. Look at the columns in the table. Describe the pattern.

3. Without calculating the value, determine the column in which \(2^{23}\) will occur.

4. Explain in your own words what it means to prove a statement.

5. Describe how you could prove the conjecture that the diagonals of a parallelogram bisect each other.

A child is building a large cube out of small cubes. Each new layer of the cube is a different color and completely covers the previous layer. The child first uses red, then green, yellow, and blue cubes, in that order.

6. How many green cubes will the child need to build the second layer?

7. How many small cubes will this new cube contain? Explain your reasoning.

<table>
<thead>
<tr>
<th>Layer #</th>
<th>Number of additional cubes</th>
<th>Total number of small cubes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (red)</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>2 (green)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3 (yellow)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

8. Complete the table at right to find the number of cubes needed for the yellow layer.

9. If the child continues to add on to the cube, after how many layers will there be 1331 cubes?

10. If the last layer is blue, how many total cubes will the large cube contain?
Lesson 2.1
Level A

1–6. 

<table>
<thead>
<tr>
<th>Number of Sides</th>
<th>Number of Triangles</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>1</td>
</tr>
<tr>
<td>4</td>

9. 6 layers
10. 343 blue cubes

**Lesson 2.2**

**Level A**

1. If an animal is a dog, then it is a mammal.

2. Hypothesis: An animal is a dog.
   Conclusion: An animal is a mammal.

3. *mammal*  
   *dog*

4. If an animal is a mammal, then it is a dog. False. Counterexample: cat

5. If $m$ is the perpendicular bisector of $AB$, then $PA = PB$.

6. If $PA = PB$, then $m$ is the perpendicular bisector of $AB$. True statement (as drawn); false if $P$ lies on $AB$.

7. If it rains on Saturday, then I won’t get wet.

8. Conditional statements

9. If $p$ then $q$. $p \Rightarrow q$

**Lesson 2.2**

**Level B**

1. If a figure is a rectangle, then it is a parallelogram.

2. Hypothesis: A figure is a rectangular. Conclusion: It is a parallelogram.

3. **parallelogram**  
   **rectangle**

4. If a figure is a parallelogram, then it is a rectangle. False statement. Counterexample: any non-rectangular parallelogram.

5. If $a$ and $b$ are even integers, then $a + b$ is an even integer. True statement: since $a$ and $b$ are divisible by 2, their sum will be divisible by 2.

6. If $a + b$ is an even integer, then $a$ and $b$ are even integers. False statement; counterexample: $a$ and $b$ are any two odd integers.

7. You may use the car tonight.

8. Examples may vary. Explanation should include an “if” and a “then.” Sample answer: If I pass this test, then my parents will be happy. Sample explanation: the conditional statements include an “if” and a “then”.

**Answers**
For Exercises 1–4, refer to the following statement:

*All dogs are mammals.*

1. Rewrite the statement as a conditional. ________________________________

2. Identify the hypothesis and conclusion of the conditional.

   **Hypothesis:** ________________________________
   
   **Conclusion:** ________________________________

3. Draw an Euler diagram that illustrates this conditional.

   ________________________________

4. Write the converse of the conditional you wrote in Exercise 1.
   
   If the converse is false, give a counterexample to show that it is false.

   ________________________________

For Exercises 5–6, refer to the given hypothesis and conclusion and the figure at the right.

   **Hypothesis:** \( m \) is the perpendicular bisector of \( \overline{AB} \).
   
   **Conclusion:** \( PA = PB \)

5. Write a conditional with the given hypothesis and conclusion.

   ________________________________

6. Write the converse of the conditional you wrote in Exercise 5. If the converse is false, give a counterexample to show that it is false.

   ________________________________

7. Arrange the three statements below into a logical chain. Then write the conditional statement that follows from the logic.

   *If I go shopping, I will buy a new umbrella.*
   
   *If it rains on Saturday, then I am going shopping.*
   
   *If I buy a new umbrella, then I won’t get wet.*

   ________________________________

8. “If-then” statements are called: ________________________________

9. Write the logical notation for a conditional statement. ________________________________
Lesson 2.2

Level B

1. If a figure is a rectangle, then it is a parallelogram.

2. Hypothesis: A figure is a rectangular. Conclusion: It is a parallelogram.

3. parallelogram

4. If a figure is a parallelogram, then it is a rectangle. False statement. Counterexample: any non-rectangular parallelogram.

5. If $a$ and $b$ are even integers, then $a + b$ is an even integer. True statement: since $a$ and $b$ are divisible by 2, their sum will be divisible by 2.

6. If $a + b$ is an even integer, then $a$ and $b$ are even integers. False statement; counterexample: $a$ and $b$ are any two odd integers.

7. You may use the car tonight.

8. Examples may vary. Explanation should include an “if” and a “then.” Sample answer: If I pass this test, then my parents will be happy. Sample explanation: the conditional statements include an “if” and a “then”.

<table>
<thead>
<tr>

</tr>
<tr>
<td>3 (yellow)</td>
<td>98</td>
<td>125</td>
</tr>
</tbody>
</table>
For Exercises 1–4, refer to the following statement:

All rectangles are parallelograms.

1. Rewrite the statement as a conditional.

2. Identify the hypothesis and conclusion of the conditional.
   - Hypothesis: ____________________________
   - Conclusion: ____________________________

3. Draw an Euler diagram that illustrates this conditional.

4. Write the converse of the conditional you wrote in Exercise 1.
   If the converse is false, give a counterexample to show that it is false.

For Exercises 5–6, refer to the given hypothesis and conclusion.

Hypothesis: $a$ and $b$ are even integers. Conclusion: $a + b$ is an even integer.

5. Write a conditional statement using the given hypothesis and conclusion.
   Is your conditional true or false? Explain. Give a counterexample if it is false.

6. Write the converse of the conditional you wrote in Exercise 5. Is the converse true or false? Explain. Give a counterexample if it is false.

7. Draw a logical conclusion from the following statements:
   - If you finish your chores on time, you may use the car tonight.
   - You finish your chores on time.

8. Give three examples of a conditional statement, and explain why they are conditional statements.
8. | Layer # | Number of additional cubes needed | Total number of small cubes |
<table>
<thead>
<tr>

</table>

9. 6 layers
10. 343 blue cubes

Lesson 2.2
Level A

1. If an animal is a dog, then it is a mammal.

2. Hypothesis: An animal is a dog.
   Conclusion: An animal is a mammal.

3. [Diagram: Venn diagram with mammal and dog as subsets]

4. If an animal is a mammal, then it is a dog. False. Counterexample: cat

5. If \( m \) is the perpendicular bisector of \( AB \), then \( PA = PB \).

6. If \( PA = PB \), then \( m \) is the perpendicular bisector of \( AB \). True statement (as drawn); false if \( P \) lies on \( AB \).

7. If it rains on Saturday, then I won’t get wet.

8. conditional statements

9. If \( p \) then \( q \). \( p \Rightarrow q \)

Lesson 2.2
Level B

1. If a figure is a rectangle, then it is a parallelogram.

2. Hypothesis: A figure is a rectangular.
   Conclusion: It is a parallelogram.

3. [Diagram: parallelogram and rectangle]

4. If a figure is a parallelogram, then it is a rectangle. False statement.
   Counterexample: any non-rectangular parallelogram.

5. If \( a \) and \( b \) are even integers, then \( a + b \) is an even integer. True statement: since \( a \) and \( b \) are divisible by 2, their sum will be divisible by 2.

6. If \( a + b \) is an even integer, then \( a \) and \( b \) are even integers. False statement; counterexample: \( a \) and \( b \) are any two odd integers.

7. You may use the car tonight.

8. Examples may vary. Explanation should include an “if” and a “then.” Sample answer: If I pass this test, then my parents will be happy. Sample explanation: the conditional statements include an “if” and a “then.”
For Exercises 1–2, refer to the given hypothesis and conclusion.

Hypothesis: $x^2 = 9$  Conclusion: $x = 3$

1. Write a conditional statement using the given hypothesis and conclusion. Why is it a conditional? Is your conditional true or false? Explain. Give a counterexample if it is false.

2. Write the converse of the conditional you wrote in Exercise 1. Is the converse true or false? Explain. Give a counterexample if it is false.

For Exercises 3–4, refer to the given hypothesis and conclusion:

Hypothesis: $MA = MB$  Conclusion: $M, A, and B$ are collinear.

3. Write a conditional statement using the given hypothesis and conclusion. Is your conditional true or false? Explain. Give a counterexample if it is false.

4. Write the converse of the conditional you wrote in Exercise 3. Is the converse true or false? Explain. Give a counterexample if it is false.

5. Use the given statements to draw a conclusion. Draw an Euler diagram if necessary.

   If you are eighteen, you can vote. You vote in today’s election.
Lesson 2.2
Level C

1. If $x^2 = 9$, then $x = 3$. It has an “if” and a “then.” False statement; counterexample: $x = -3$.

2. If $x = 3$, then $x^2 = 9$. True statement.

3. If $MA = MB$, then $M$, $A$, and $B$ are collinear. False statement; counterexample: $\angle AMB$

4. If $M$, $A$, and $B$ are collinear, then $MA = MB$. False statement; counterexample: Any segment containing $M$, $A$, and $B$, in which $M$ is not the midpoint.

5. No conclusion can be drawn from these statements.

Lesson 2.3
Level A

1. $\angle KXG$ and $\angle GXH$; $\angle GXH$ and $\angle HXI$; $\angle HXI$ and $\angle IXJ$.

2. Quadrilaterals

3. $A$ and $D$ are kites. ($D$ is also a rhombus). Sample definition: A quadrilateral with two sets of adjacent sides congruent.

4. If a figure is a triangle, then it is formed by three segments.

5. If a figure is formed by three segments, then it is a triangle.

6. A figure is a triangle iff it is formed by three segments.

7. This statement is not a definition. Sample explanation: You can draw a figure with three segments that all overlap and this will not be a triangle.

Lesson 2.3
Level B

1. $\angle ABC$ and $\angle CBE$; $\angle DCB$ and $\angle BCE$

2. $A$, $C$, and $D$ are equilateral.

3. A figure is equilateral if all sides are congruent.

4. If a figure is a square, it has four congruent sides.

5. If a figure has four congruent sides, then it is a square.

6. A figure is a square iff it has four congruent sides.

7. This statement is not a definition. Sample explanation: A rhombus has four congruent sides but it is not a square—definition should include all right angles.

Lesson 2.3
Level C

1. $\angle CDB$ and $\angle BDA$; $\angle DCA$ and $\angle ACB$; $\angle CBD$ and $\angle DBA$; $\angle DAC$ and $\angle CAB$.

2. $B$ and $C$ are trapezoids.

3. A trapezoid is a quadrilateral with only one pair of parallel sides.

4. If angles are a linear pair, then they are adjacent and supplementary.

5. If angles are adjacent and supplementary, then they form a linear pair.
1. Name all pairs of adjacent angles in the figure at the right.

The following are kites: The following are not kites:

2. Draw a Euler diagram to represent the definition of a kite.

3. Which of the figures above is a kite? Write a definition for a kite.

Use the steps in Exercises 4–7 to determine whether the given sentence is a definition.

A triangle is formed by three segments.

4. Write the sentence as a conditional statement.

5. Write the converse of the conditional.

6. Write a biconditional statement.

7. Decide whether the statement is a definition, and explain your reasoning.
Lesson 2.2
Level C

1. If \( x^2 = 9 \), then \( x = 3 \). It has an “if” and a “then.” False statement; counterexample: \( x = -3 \).

2. If \( x = 3 \), then \( x^2 = 9 \). True statement.

3. If \( MA = MB \), then \( M \), \( A \), and \( B \) are collinear. False statement; counterexample: \( \angle AMB \)

4. If \( M \), \( A \), and \( B \) are collinear, then \( MA = MB \). False statement; counterexample: Any segment containing \( M \), \( A \), and \( B \), in which \( M \) is not the midpoint.

5. No conclusion can be drawn from these statements.

Lesson 2.3
Level A

1. \( \angle KXG \) and \( \angle GXH \); \( \angle GXH \) and \( \angle HXI \); \( \angle HXI \) and \( \angle I XJ\).

2. **Quadrilaterals**

3. \( A \) and \( D \) are kites. (\( D \) is also a rhombus). Sample definition: A quadrilateral with two sets of adjacent sides congruent.

4. If a figure is a triangle, then it is formed by three segments.

5. If a figure is formed by three segments, then it is a triangle.

6. A figure is a triangle iff it is formed by three segments.

Lesson 2.3
Level B

1. \( \angle ABC \) and \( \angle CBE \); \( \angle DCB \) and \( \angle BCE \)

2. \( A \), \( C \), and \( D \) are equilateral.

3. A figure is equilateral if all sides are congruent.

4. If a figure is a square, it has four congruent sides.

5. If a figure has four congruent sides, then it is a square.

6. A figure is a square iff it has four congruent sides.

7. This statement is not a definition. Sample explanation: A rhombus has four congruent sides but it is not a square—definition should include all right angles.

Lesson 2.3
Level C

1. \( \angle CDB \) and \( \angle BDA \); \( \angle DCA \) and \( \angle ACB \); \( \angle CBD \) and \( \angle DBA \); \( \angle DAC \) and \( \angle CAB \).

2. \( B \) and \( C \) are trapezoids.

3. A trapezoid is a quadrilateral with only one pair of parallel sides.

4. If angles are a linear pair, then they are adjacent and supplementary.

5. If angles are adjacent and supplementary, then they form a linear pair.

\[ \sqrt{2} = 3 \]
1. Name all pairs of adjacent angles in the figure at the right.
   
   ______________________________________________________________________
   ______________________________________________________________________

   The following are equilateral polygons:
   
   The following are not equilateral polygons:

2. Which of the figures below are equilateral? ______________________________________________________________________

3. Draw a Euler diagram, and write a definition of equilateral polygons.
   
   ______________________________________________________________________
   ______________________________________________________________________

Use the steps in Exercises 4–7 to determine whether the given sentence is a definition.

A square is a figure with four congruent sides.

4. Write the sentence as a conditional statement: _____________________________________________

5. Write the converse of the conditional: _____________________________________________

6. Write a biconditional statement: _____________________________________________

7. Decide whether the statement is a definition, and explain your reasoning.
   ______________________________________________________________________
Lesson 2.2
Level C

1. If \( x^2 = 9 \), then \( x = 3 \). It has an “if” and a “then.” False statement; counterexample: \( x = -3 \).

2. If \( x = 3 \), then \( x^2 = 9 \). True statement.

3. If \( MA = MB \), then \( M, A, \) and \( B \) are collinear. False statement; counterexample: \( \angle AMB \)

4. If \( M, A, \) and \( B \) are collinear, then \( MA = MB \). False statement; counterexample: Any segment containing \( M, A, \) and \( B \), in which \( M \) is not the midpoint.

5. No conclusion can be drawn from these statements.

Lesson 2.3
Level A

1. \( \angle KXG \) and \( \angle GXH \); \( \angle GXH \) and \( \angle HXI \); \( \angle HXI \) and \( \angle IXJ \).

2. Quadrilaterals

   kite

3. \( A \) and \( D \) are kites. (\( D \) is also a rhombus).
   Sample definition: A quadrilateral with two sets of adjacent sides congruent.

4. If a figure is a triangle, then it is formed by three segments.

5. If a figure is formed by three segments, then it is a triangle.

6. A figure is a triangle iff it is formed by three segments.

7. This statement is not a definition. Sample explanation: You can draw a figure with three segments that all overlap and this will not be a triangle.

Lesson 2.3
Level B

1. \( \angle ABC \) and \( \angle CBE \); \( \angle DCB \) and \( \angle BCE \)

2. \( A, C, \) and \( D \) are equilateral.

3. A figure is equilateral if all sides are congruent.

4. If a figure is a square, it has four congruent sides.

5. If a figure has four congruent sides, then it is a square.

6. A figure is a square iff it has four congruent sides.

7. This statement is not a definition. Sample explanation: A rhombus has four congruent sides but it is not a square—definition should include all right angles.

Lesson 2.3
Level C

1. \( \angle CDB \) and \( \angle BDA \); \( \angle DCA \) and \( \angle ACB \);
   \( \angle CBD \) and \( \angle DBA \); \( \angle DAC \) and \( \angle CAB \).

2. \( B \) and \( C \) are trapezoids.

3. A trapezoid is a quadrilateral with only one pair of parallel sides.

4. If angles are a linear pair, then they are adjacent and supplementary.

5. If angles are adjacent and supplementary, then they form a linear pair.
1. Name all pairs of adjacent angles in the figure at the right.

The following are trapezoids:

The following are not trapezoids:

2. Which of the figures below are trapezoids?

3. Draw a Euler diagram, and write a definition of a trapezoid.

4. Write the sentence as a conditional statement.

5. Write the converse of the conditional.

6. Write a biconditional statement.

7. Decide whether the statement is a definition, and explain your reasoning.

Use the steps in Exercises 4–7 to determine whether the given sentence is a definition.

Linear pairs are supplementary, adjacent angles.
Lesson 2.2
Level C

1. If \( x^2 = 9 \), then \( x = 3 \). It has an “if” and a “then.” False statement; counterexample: \( x = -3 \).

2. If \( x = 3 \), then \( x^2 = 9 \). True statement.

3. If \( MA = MB \), then \( M \), \( A \), and \( B \) are collinear. False statement; counterexample: \( \angle AMB \)

4. If \( M \), \( A \), and \( B \) are collinear, then \( MA = MB \). False statement; counterexample: Any segment containing \( M \), \( A \), and \( B \), in which \( M \) is not the midpoint.

5. No conclusion can be drawn from these statements.

Lesson 2.3
Level A

1. \( \angle KXG \) and \( \angle GXH \); \( \angle GXH \) and \( \angle HXI \);
   \( \angle HXI \) and \( \angle I X J \).

2. Quadrilaterals

3. A and D are kites. (D is also a rhombus). Sample definition: A quadrilateral with two sets of adjacent sides congruent.

4. If a figure is a triangle, then it is formed by three segments.

5. If a figure is formed by three segments, then it is a triangle.

6. A figure is a triangle iff it is formed by three segments.

7. This statement is not a definition. Sample explanation: You can draw a figure with three segments that all overlap and this will not be a triangle.

Lesson 2.3
Level B

1. \( \angle ABC \) and \( \angle CBE \); \( \angle DCB \) and \( \angle BCE \)

2. A, C, and D are equilateral.

3. A figure is equilateral if all sides are congruent.

4. If a figure is a square, it has four congruent sides.

5. If a figure has four congruent sides, then it is a square.

6. A figure is a square iff it has four congruent sides.

7. This statement is not a definition. Sample explanation: A rhombus has four congruent sides but it is not a square—definition should include all right angles.

Lesson 2.3
Level C

1. \( \angle CDB \) and \( \angle BDA \); \( \angle DCA \) and \( \angle ACB \);
   \( \angle CBD \) and \( \angle DBA \); \( \angle DAC \) and \( \angle CAB \).

2. B and C are trapezoids.

3. A trapezoid is a quadrilateral with only one pair of parallel sides.

4. If angles are a linear pair, then they are adjacent and supplementary.

5. If angles are adjacent and supplementary, then they form a linear pair.
6. Angles are a linear pair iff they are adjacent and supplementary.

7. This is a definition. Sample explanation: The conditional statement and the converse are both true and this makes the biconditional true at all times.

11. AD, AR
12. CB, BT
13. Transitive Property (or Substitution)
14. Substitution
15. Reflexive Property
16. Subtraction Property
Match each property with its definition.

______ 1. Addition Property  a. If \( a = b \), then \( ac = bc \).
______ 2. Symmetric Property  b. If \( a = b \), then \( a - c = b - c \).
______ 3. Substitution Property  c. For all real numbers \( a \), \( a = a \).
______ 4. Multiplication Property  d. If \( a = b \), you may replace \( a \) with \( b \) in any true equation containing \( a \) and the resulting equation will still be true.
______ 5. Division Property  e. If \( a = b \) and \( c \neq 0 \), then \( \frac{a}{c} = \frac{b}{c} \).
______ 6. Reflexive Property  f. If \( a = b \), then \( a + c = b + c \).
______ 7. Subtraction Property  g. For all real numbers \( a \) and \( b \), if \( a = b \), then \( b = a \).
______ 8. Transitive Property  h. For all real numbers \( a \) and \( b \), if \( a = b \) and \( b = c \), then \( a = c \).

Refer to the diagram at right, in which \( \angle NAG = \angle EAL \). Use the Overlapping Angles Theorem to complete the following:

9. \( \angle NAG + \angle GAL = \angle GAL + \) ______________

If \( \angle NAG = 24^\circ \), and \( \angle NAL = 36^\circ \), find the following:

10. \( \angle GAL \) ______________  11. \( \angle AEN \) ______________

Complete the proof below:

Given: \( \angle 1 = \angle 2 \)
\[ \angle T + \angle 3 + \angle 2 = 180^\circ \]
\[ \angle T + \angle 1 + \angle 4 = 180^\circ \]
Prove: \( \angle 3 = \angle 4 \)

<td>$a = 0$</td>
<td></td>
</tr>
<tr>
<td>$6 = 0$</td>
<td>4.</td>
</tr>
</tbody>
</table>

5. What startling fact did you “prove” in Exercises 1–4? ____________________________

6. What property of equality is violated in this proof? ____________________________

For Exercises 7–12, refer to the figure at right. The figure was formed by reflecting $\triangle ABC$ over $AD$.

Given: $m\angle BAC = m\angle B'AC' = 90^\circ$
$AD$ bisects $\angle BAB'$
$m\angle BAD \approx 37^\circ$
$m\angle C' + m\angle ABC' + m\angle BAC' = 180^\circ$
$m\angle C + m\angle AB'C + m\angle CAB' = 180^\circ$
$m\angle C + m\angle CAD = m\angle C' + m\angle C'AD = 90^\circ$

Find the following:

7. $m\angle BAB'$  
8. $m\angle BAC'$  
9. $m\angle AB'D$
10. $m\angle B'AD$  
11. $m\angle AB'C$  
12. $m\angle C'$

13. Write a paragraph proof to show that the solution to $\frac{1}{4}x - 7 = 2$ is $x = 36$.

For Exercises 5–12, use the figure at the right. \( \angle 1 \cong \angle 8 \) and \( m \parallel n \).

5. Name all the pairs of vertical angles.

6. Explain why \( m\angle 2 \cong m\angle 7 \).

7. What angles are congruent to \( \angle 1 \)?

8. What angles are congruent to \( \angle 2 \)?

If \( m\angle 1 = 7x + 8 \), and \( m\angle 3 = 4(3x - 5) \), find the following:

9. \( x \) 

10. \( m\angle 1 \)

11. \( m\angle 5 \)

12. \( m\angle 6 \)

You carefully measure all the angles of a figure that looks like a rectangle. You discover that all of the angles are 90° and conclude that all rectangles have four 90° angles.

13. Did you use inductive or deductive reasoning?

13. Proofs will vary. Statements and reasons given.

\[
\frac{1}{4}x - 7 = 2 \\
\frac{1}{4}x + 0 = 9 \\
\frac{1}{4}x = 9 \\
4 \left( \frac{1}{4} \right) x = 4(9) \\
x = 36 \\
x = 36
\]

**Lesson 2.5**

10. 22.5°
11. 157.5°
12. 157.5°

13. Congruent Supplements Theorem
14. induction: You are assuming that it was snowing and that is why James wore his coat.
15. deduction: The conclusion follows logically from the given statements.

**Lesson 2.5**

**Level B**

1. \( m\angle 3 \) and \( m\angle 4 \) are vertical angles; Given
2. \( m\angle 1 + m\angle 4 = 180^\circ \)
3. \( \angle 1 \) and \( \angle 4 \) are supplementary \( \angle 3 \) and \( \angle 1 \) are supplementary; definition of supplementary angles
4. \( \angle 3 \equiv \angle 4 \); Congruent Supplements Theorem
5. \( \angle 1 \) and \( \angle 3 \), \( \angle 2 \) and \( \angle 4 \), \( \angle 6 \) and \( \angle 8 \), \( \angle 5 \) and \( \angle 7 \)
6. Congruent Supplements Theorem
7. \( \angle 1 \equiv \angle 3 \equiv \angle 6 \equiv \angle 8 \)
8. \( \angle 2 \equiv \angle 4 \equiv \angle 5 \equiv \angle 7 \)
9. \( x = 5.6 \)
10. 47.2°
11. 132.8°
12. 47.2°
13. You used inductive reasoning.
14. No, this is not a proof. Explanations will vary. Sample answer: A specific example was shown. In order to be a proof, it needs to be shown true for all rectangles.
1. Write a paragraph proof.

Given: \( \angle 3 \) and \( \angle 4 \) are vertical angles.
Prove: \( \angle 3 \cong \angle 4 \)

2. Use the figure at right for Exercises 2–9.

Given: \( \angle 8 \cong \angle 4 \);
\[ m\angle 5 + m\angle 8 + m\angle 9 = 180^\circ; \]
\[ m\angle 2 = 102.16; \]
\[ m\angle 8 = 7x + 19; \]
\[ m\angle 11 = 32x - 83 \]

Use the Vertical Angles Theorem and the Congruent Supplements Theorem to find the following:

2. \( x \) __________ 3. \( m\angle 4 \) ________ 4. \( m\angle 5 \) ________ 5. \( m\angle 9 \) ________
6. \( m\angle 10 \) ________ 7. \( m\angle 12 \) ________ 8. \( m\angle 1 \) ________ 9. \( m\angle 3 \) ________

10. Lewis Carroll, best known as the author of *Alice’s Adventures in Wonderland*, loved mathematics and logic puzzles. The following famous puzzle was found in his diary:

“The Dodo says that the Hatter tells lies.
The Hatter says that the March Hare tells lies.
The March Hare says that both the Dodo and the Hatter tell lies.”

Who is telling the truth? Did you use inductive or deductive reasoning? Explain your answer.
Lesson 2.5
Level C

1. Proofs may vary but should include the following:
   \( m\angle 3 \) and \( m\angle 4 \) are vertical angles; Given
   \( m\angle 1 + m\angle 4 = 180^\circ \)
   \( m\angle 2 + m\angle 3 = 180^\circ \);
   Linear Pair Property
   \( \angle 1, \angle 4 \) are supplementary
   \( \angle 2, \angle 3 \) are supplementary;
   definition of supplementary angles
   \( \angle 3 \cong \angle 4 \); Congruent Supplements
   Theorem

2. \( x = 4.08 \)

3. 47.56°

4. 102.16°

5. 30.28°

6. 149.72

7. 132.44°

8. 30.28°

9. 47.56°

10. The Hatter is telling the truth.
    Explanations will vary. Sample explanation: If the Dodo is lying, then
    the Hatter tells the truth. Therefore, March Hare tells the lies and he said that
    both the Dodo and the Hatter tell lies. Since March Hare is lying, Dodo could be
    lying and the Hatter could be telling the truth. This does not contradict the
    assumption. Therefore, the Hatter is telling the truth.
Draw all of the axes of symmetry for each figure.

1. 2. 3.

Each figure below shows part of a shape with reflectional symmetry. Complete each figure.

4. 5. 6.

7. Which of the completed shapes from Exercises 4–6 also have rotational symmetry?

Match each term with its definition.

- 8. polygon
- 9. reflectional symmetry
- 10. rotational symmetry
- 11. regular polygon
- 12. central angle of a regular polygon
- 13. axis of symmetry
- 14. center of a regular polygon

8. a polygon that is both equiangular and equilateral
9. the point that is equidistant from all vertices of the polygon
10. an angle whose vertex is the center of the circle and whose sides pass through two consecutive vertices
11. a plane figure formed from three or more segments such that each segment intersects exactly two other segments
12. the line over which an image is reflected
13. the reflected image across a line coincides exactly with the preimage
14. an image that is the same as the preimage after a rotation of any degree measure other than 0° or multiple of 360°
Lesson 3.1
Level A

1. 

2. 

3. 

4. 

5. 

6. 

7. #5 and #6 have rotational symmetry.

8. e
9. f
10. g
11. a
12. c

Lesson 3.1
Level B

1. 2-fold rotational; reflectional symmetry; 2 axes of symmetry; measure of angle of rotation = 90°

2. 5-fold rotational symmetry; reflectional symmetry; 5 axes of symmetry; measure if central angle = 72°

3. reflectional symmetry only; axes of reflection at $x = 2$

13. d
14. b
Examine each figure below. Determine whether it has reflectional symmetry, rotational symmetry, or both. If it has reflectional symmetry, draw all of the axes of symmetry. If it has rotational symmetry, mark the center of rotation and find the measure of the central angle.

1. 
2. 
3. 

4. The following figure shows part of a shape with reflectional symmetry. Complete the figure.

5. The following figure is part of a shape with 6-fold rotational symmetry. Complete the figure.

Classify each statement as true or false. Explain your reasoning in each false case.

6. A parallelogram has both reflectional and rotational symmetry. ________________
7. The axis of symmetry of a segment is its perpendicular bisector. ________________
8. All equilateral polygons are regular. ________________
9. A regular $n$-gon has $\frac{360}{n}$-fold rotation symmetry. ________________
10. An equilateral triangle has three axes of symmetry. ________________
11. A polygon can be formed from two segments. ________________
12. The center of a polygon is equidistant from each vertex. ________________
Lesson 3.1
Level A

1. #5 and #6 have rotational symmetry.

8. e

9. f

10. g

11. a

12. c

Lesson 3.1
Level B

1. 2-fold rotational; reflectional symmetry; 2 axes of symmetry; measure of angle of rotation = 90°

2. 5-fold rotational symmetry; reflectional symmetry; 5 axes of symmetry; measure if central angle = 72°

3. reflectional symmetry only; axes of reflection at x = 2
Answers

4. False, a (non-rectangle) parallelogram has 2-fold rotational symmetry only.

7. True

8. False; A rhombus is equilateral, but not equiangular.

9. False; The measure of the central angle of a regular n-gon is \( \frac{360}{n} \)°.

10. True

11. False; A polygon needs at least 3 segments.

12. True

Lesson 3.1
Level C

1. The figure has two-fold rotation symmetry about the origin.

2. The figure has reflection symmetry. The axis of symmetry is the y-axis.

3. The figure has both reflection symmetry and two-fold rotation symmetry about the origin. The axis of symmetry is the y-axis.

4. 5.

6. If \( n \) is odd, the axes of symmetry are the perpendicular bisectors of each side, through the opposite vertex. If \( n \) is even, the axes of symmetry lie on the line containing the opposite vertices.
3.1 Symmetry in Polygons

Examine each figure below. Determine whether it has reflectional symmetry, rotational symmetry, or both. If it has reflectional symmetry, draw all of the axes of symmetry. If it has rotational symmetry, mark the center of rotation.

1. ____________  2. ____________  3. ____________

In each figure below, reflect over the given axis of symmetry, or rotate as directed to complete the figure.

4. The figure has 2-fold rotation symmetry about the origin.  
5. The axis of symmetry is the y-axis.  
6. The figure has reflectional symmetry.

For Exercises 7–13, use the regular polygons pictured at the right to complete the table and answer the question.

<table>
<thead>
<tr>
<th>Number of sides</th>
<th>Number of axes of symmetry</th>

Practice Masters Level C

3.2 Properties of Quadrilaterals

For Exercises 1–3, use the markings and your conjectures about quadrilaterals from the textbook to identify the following figures.

1. ________________  2. ________________  3. ________________

![Diagrams of quadrilaterals]

Use the figure at right for Exercises 4–5. Quadrilateral $ACBD$ was formed by reflecting scalene triangle $ABC$ across $AB$.

4. What type of special quadrilateral is $ACBD$? Explain.

5. How is $AB$ related to $DC$ (not shown)?

In the figure at right, $\triangle ABC$ is isosceles, with $AB = BC$.

6. What type of quadrilateral results if $\triangle ABC$ is reflected across $AC$? Explain.

7. What type of quadrilateral results if $\triangle ABC$ is reflected across $AB$? Explain.

Each figure below shows part of a shape with the given rotational symmetry. Complete each shape and identify the resulting quadrilateral. Explain your answer.

8. 4-fold

9. 2-fold

19. Alternate Exterior Angles Theorem
20. Corresponding Angles Postulate

**Lesson 3.3**

**Level C**

1. Two nonadjacent interior angles that lie on opposite sides of a transversal.
2. A line, ray, or segment that intersects two or more coplanar lines, rays, or segments, each at a different point.
3. Interior angles that lie on the same side of a transversal.
4. Two nonadjacent exterior angles that lie on opposite sides of a transversal.
5. Two nonadjacent angles, one interior and one exterior, that lie on the same side of a transversal.
6. $x = 4$
7. $32^\circ$
8. $58^\circ$
9. Sample answer: $\angle 5$ and $\angle 4$ are supplementary because they are same-side interior angles. $m\angle 5 + m\angle 4 = 180^\circ$ by the definition of supplementary angles. $\angle 5$ is congruent to $\angle 7$ because they are vertical angles. $\angle 4$ and $\angle 2$ are congruent because they are vertical angles. By substitution, $m\angle 2 + m\angle 7 = 180^\circ$. So, because of the definition of supplementary angles, $\angle 2$ and $\angle 7$ are supplementary.
10. $\angle E \cong \angle A$, parallelogram $ABCD$ given
11. Sample answer: $\angle A \cong \angle DCB$, opposite angles in a parallelogram are congruent.
12. $\angle E \cong \angle DCB$, Transitive Property of Congruence

**Lesson 3.4**

**Level A**

1. Given
2. Converse of Alternate Exterior Angles Theorem
3. Given
4. Same Side Interior Angles Theorem
5. Congruent Supplements Theorem
6. Converse of Corresponding Angles Postulate
7. Alternate Interior Angles Theorem
8. Corresponding Angles Postulate
9. Alternate Exterior Angles Theorem
10. Same Side Interior Angles Theorem

Sample answer:

$\angle 5$ and $\angle 4$ are supplementary because they are same-side interior angles. $m\angle 5 + m\angle 4 = 180^\circ$ by the definition of supplementary angles. $\angle 5$ is congruent to $\angle 7$ because they are vertical angles. $\angle 4$ and $\angle 2$ are congruent because they are vertical angles. By substitution, $m\angle 2 + m\angle 7 = 180^\circ$. So, because of the definition of supplementary angles, $\angle 2$ and $\angle 7$ are supplementary.

$\angle E \cong \angle A$, parallelogram $ABCD$ given

$\angle A \cong \angle DCB$, opposite angles in a parallelogram are congruent.

$\angle E \cong \angle DCB$, Transitive Property of Congruence
3.3 Parallel Lines and Transversals

Explain in your own words the definition of each vocabulary word.

1. alternate interior angles
2. transversal
3. same-side interior angles
4. alternate exterior angles
5. corresponding angles

In trapezoid TRAP at the right, \( m\angle APR = 2x^2 \), \( m\angle PRT = 6x + 8 \), \( m\angle T = 3x^2 + 10 \). Find the indicated measures.

6. \( x \) 
7. \( m\angle PRT \) 
8. \( m\angle T \)

9. Write a two-column or paragraph proof to prove that same-side exterior angles are supplementary.

Write a two-column proof:
Given: Parallelogram \( ABCD \); \( \angle E \cong \angle A \)
Prove: \( \angle E \cong \angle DCB \)

11. 80°
For Exercises 1–6, use the quadrilateral at the right, in which $m\angle BAC = 3x - 2$, $m\angle ABC = 8x - 23$, and $m\angle BCA = 61 - 2x$. Find the indicated measures.

1. $m\angle ACD$  
2. $m\angle ABD$  
3. $m\angle CDA$  
4. $m\angle BCD$  
5. $m\angle BAD$  
6. $m\angle BDC$

In trapezoid $AC'CB$ at the right, $m\angle DC'C = m\angle DCC'$, and $m\angle DAB = m\angle DBA$. If $m\angle DBA = 31^\circ$, find the indicated measures.

7. $m\angle ABC$  
8. $m\angle ADB$  
9. $m\angle DCC'$

10. In the figure at the right, find $x$.  

11. A popular old riddle tells of a person who leaves his home, walks one mile due south, turns to his left, walks one more mile, then turns again to his left and walks a third mile. At the end of this trip, he ends up back at his home! How is this possible?

12. In the sphere at the right, three great circles are drawn so that they form a “triangle”. Make a conjecture about the sum of the angles of this triangle. Explain your reasoning.

8. $n = 12$  
9. $n = 18$  
10. 100°  
11. 80°  
12. One line can be drawn because of the Parallel Postulate.
In Exercises 1–3, find the indicated angle measures, $x$.

1. \[ \text{______________________________} \]
2. \[ \text{______________________________} \]
3. \[ \text{______________________________} \]

For each polygon, determine the measure of an interior angle and the measure of an exterior angle.

4. a regular octagon \[ \text{______________________________} \]
5. a regular decagon \[ \text{______________________________} \]

For Exercises 6–7, an interior angle measure of a regular polygon is given. Find $n$, the number of sides of the polygon.

6. \[ 140^\circ \] \[ \text{______________________________} \]
7. \[ 156^\circ \] \[ \text{______________________________} \]

For Exercises 8–9, an exterior angle measure of a regular polygon is given. Find $n$, the number of sides of the polygon.

8. \[ 30^\circ \] \[ \text{______________________________} \]
9. \[ 20^\circ \] \[ \text{______________________________} \]

For Exercises 10–12, use the figure at the right to find the indicated measures.

10. \[ m\angle D \] \[ \text{______________________________} \]
11. \[ m\angle C \] \[ \text{______________________________} \]
12. \[ m\angle B \] \[ \text{______________________________} \]

A regular polygon has an exterior angle measure of $(x + 3)^\circ$ and an interior angle measure of $(13x - 33)^\circ$.

13. Find the measure of each angle. \[ \text{______________________________} \]
14. How many sides does this polygon have? \[ \text{______________________________} \]

7. parallelogram, since $FE \parallel BD$ and $FD \parallel EB$.
8. trapezoid, since $FE \parallel AB$.
9. $CE \cong EB \cong FD$, $FE \cong AD \cong DB$, $ED \cong CF \cong FA$
For Exercises 1–3, find the indicated angle measure, \( x \).

1. 
2. 
3. 

In the figure at the right, \( \angle A = 4x + 7 \), \( \angle B = 4x - 18 \), \( \angle C = 5(x - 1) \), \( \angle D = 2x + 1 \), and \( \angle E = 7x - 39 \). Find the indicated measures.

4. \( x \) 
5. \( \angle A \) 
6. \( \angle B \) 
7. \( \angle C \) 
8. \( \angle D \) 
9. \( \angle E \) 

In the figure at the right, \( \angle 1 = 5x + 11 \), \( \angle 4 = 3x + 1 \), \( \angle 6 = 8x - 19 \), and \( \angle 7 = 3x - 13 \). Find the indicated measures.

10. \( \angle 2 \) 
11. \( \angle 3 \) 
12. \( \angle 8 \) 
13. \( \angle 5 \) 

14. What are the interior and exterior angle measures of a regular nonagon?

15. How many sides does a regular polygon with interior angle measure of 168° have?

16. How many sides does a regular polygon with exterior angle measure of 20° have?
12. 100°
13. The exterior angle measure is 18°; the interior angle measure is 162°.
14. The polygon has 20 sides.

Lesson 3.6  
Level B
1. \(x = 78°\)
2. \(x = 126°\)
3. \(x = 150°\)
4. \(x = 27\)
5. 115°
6. 90°

6. midsegments
7. parallelogram, since \(\overline{FE} \parallel \overline{BD}\) and \(\overline{FD} \parallel \overline{EB}\).
8. trapezoid, since \(\overline{FE} \parallel \overline{AB}\).
9. \(\overline{CE} \cong \overline{EB} \cong \overline{FD}, \overline{FE} \cong \overline{AD} \cong \overline{DB}, \overline{ED} \cong \overline{CF} \cong \overline{FA}\)
For Exercises 1–4, determine the number of sides of the regular polygon described.

1. The measure of one interior angle is twice the measure of the exterior angle. _________
2. The measure of one interior angle is half the measure of the exterior angle. _________
3. The measure of one interior angle is three times the measure of the exterior angle. _________
4. The ratio of the exterior angle measure to the interior angle measure is 2:3. _________

In the figure at the right, \( \angle A = 7x + 6y \), \( \angle B = 38y \), \( \angle C = 13x + 3y \), \( \angle D = 19x - 9y \), and \( \angle E = 15x \).
If \( \angle A = 73^\circ \), \( \angle C = 103^\circ \), find the indicated measures.

5. \( x \) ________________ 6. \( y \) ________________
7. \( \angle B \) ________________ 8. \( \angle D \) ________________
9. \( \angle E \) ________________

The sphere at the right shows 2 lines of longitude and 4 lines of latitude. Use the sphere for Exercises 10 and 11.

10. Describe the shape formed by the intersections of the latitude and longitude lines. Write a conjecture about the angle-sum of the shapes.
    ____________________________________________________________
    ____________________________________________________________

11. Do you think “corresponding” angles are congruent on the sphere?
    ____________________________________________________________

In the figure at the right, \( \angle A = 45^\circ \), \( \angle JFG = 100^\circ \), \( \angle FJI = 112^\circ \), \( \angle GHI = 91^\circ \), and \( \angle C = 44^\circ \). Find the indicated measures.

12. \( \angle B \) ________________ 13. \( \angle FGH \) ________________

In Exercises 1–3, the endpoints of a segment are given. Determine the slope and midpoint of the segment.

1. (4, 3) and (−3, −4) 
2. (5, 8) and (−7, 6) 
3. (−3, −8) and (−5, −4) 

In Exercises 4–6, the endpoints of two segments are given. State whether the segments are parallel, perpendicular, or neither. Justify your answer.

4. (−2, 1) and (3, 7); (1, 1) and (−3, 11) 
5. (2, −1) and (6, 11); (−3, −7) and (−1, −1) 
6. (−4, 0) and (2, 3); (−2, 1) and (4, −11) 

7. On the grid provided, graph quadrilateral $ABCD$. What type of quadrilateral is this? Justify your answer.

$A(3, 2), B(1, −2), C(2, −5), D(4, −1)$

8. The endpoints of two segments are given. Draw each segment on the grid provided, then connect the endpoints to each other. What type of quadrilateral do you think this is? Explain your answer.

$\overline{AC}$ has endpoints (−3, 11) and (2, −4).

$\overline{BD}$ has endpoints (−6, 5) and (3, 8).
Lesson 3.7
Level B

1. The triangles are congruent. Explanations will vary

2. \( x = 2 \)

3. \( y = 4 \)

4. 10

5. 5

6. 18

7. 8

8. 23

9. 11.5

10. 12.5

11. rectangle; Since \( ABCD \) is a kite, it has perpendicular diagonals. Each segment formed by \( EFGH \) is parallel to one of the diagonals, \( EFGH \) is a rectangle (four 90° angles).

12. parallelogram; Each side of \( MPNT \) is parallel to one of the diagonals of \( QUAD \).

Lesson 3.7
Level C

1. 18.75

2. 11.25

3. 3.75

4. 10

5. 20

6. 30

7. \( x = 7 \)

8. 39

9. 52

10. 65

11. rectangle; The sides of the rectangle are parallel to the diagonals of the rhombus, which are perpendicular.

12. trapezoid; \( EH \parallel BD \).

Lesson 3.8
Level A

1. slope = 1, midpoint: \( \left( \frac{1}{2}, \frac{1}{2} \right) \)

2. slope = \( \frac{1}{6} \), midpoint: (−1, 7)

3. slope = −2, midpoint: (−4, −6)

4. neither; The product of the slopes is −3.

5. parallel; Both slopes are 3.

6. perpendicular; The product of the slopes is −1.

7. The figure is a parallelogram. The slopes of both pairs of opposite sides are equal.
8. The figure is a kite. Diagonals are perpendicular and it has a pair of adjacent congruent sides.

Lesson 3.8
Level B

1. \((1, 3), (7, 3), (6, 6), (2, 6)\)

2. \((1, -1)(7, -4)\) and \((-1, -3)\)

3. \(C'C'B'B\) is a parallelogram: the slopes of the opposite sides are equal.

4. Three parallelograms can be formed.

5. \((-1, -1), (-5, -1), (3, 3)\)

6. \((4, 5)\)

7. \(-\frac{1}{2}\)

8. Possible solutions: \((-6, 4)\) or \((2, 10)\)

9. Yes, it is a right triangle. Slopes are \(\frac{2}{7}, -\frac{7}{2}\), and \(-\frac{12}{11}\), and two sides are perpendicular.

Lesson 3.8
Level C

1. \((-3, 7)\)

2. \(-\frac{2}{11}\)

3. \(D, E, C\)

4. Trapezoid; The slopes of one pair of opposite sides are equal.

5. Coordinates: \((2, 7.5)\) and \((-3, -5)\); The slope is \(\frac{5}{2}\).

6. \((5, 1), (5, 7)\) and \((-1, 7)\) respectively.

7. \(45^\circ\)

8. Slope = 1

9. Three; Sample explanation: There are three points that are possible that will yield two sets of opposite sides with equal slopes.

10. \((0, 5), (-10, -1), (4, -9)\)
Use the grid at the right for Exercises 1–3.

1. Graph \( \triangle ABC \) with vertices \( A(-5, 4), B(1, 1), \) and \( C(-7, 2) \).

2. \( \triangle ABC \) is translated using the rule \( T(x, y) = (x + 6, y - 5) \).
   List and graph the coordinates of the image, \( \triangle A'B'C' \).

3. What is the shape determined by \( CC'B'B' \)? Justify your answer.

Use the grid at the right for Exercises 4 and 5. Points \( A, B, \) and \( C \) are three vertices of a parallelogram.

4. How many parallelograms can be formed using these three points? Explain your answer.

5. Give the coordinates of the fourth vertex of the other parallelograms.

For Exercises 6 and 7, one endpoint of \( \overline{AB} \) is \((-2, -7)\).
The midpoint of the segment is \((1, -1)\).

6. Find the coordinates of \( B \).

7. If you drew a line perpendicular to \( \overline{AB} \) through the midpoint, what would be the slope of that line?

8. A segment has slope \( \frac{3}{4} \). One endpoint of the segment has coordinates \((-2, 7)\). Find the coordinates of the other endpoint.

9. A triangle has vertices \((-3, 4), (4, 6), \) and \((-7, 18)\). Use slopes to determine whether the triangle is a right triangle. Justify your answer.
Answers

8. The figure is a kite. Diagonals are perpendicular and it has a pair of adjacent congruent sides.

![Diagram of a kite]

8. possible solutions: (−6, 4) or (2, 10)

9. Yes, it is a right triangle. Slopes are $\frac{2}{7}$, $−\frac{7}{2}$, and $−\frac{12}{11}$, and two sides are perpendicular.

Lesson 3.8
Level C

1. (−3, 7)

2. $−\frac{2}{11}$

3. trapezoid; The slopes of one pair of opposite sides are equal.

4. Coordinates: (2, 7.5) and (−3, −5); The slope is $\frac{5}{2}$

5. (5, 1), (5, 7) and (−1, 7) respectively.

6. 45°

7. slope = 1

8. three; Sample explanation: There are three points that are possible that will yield two sets of opposite sides with equal slopes.

9. three; Sample explanation: There are three points that are possible that will yield two sets of opposite sides with equal slopes.

10. (0, 5), (−10, −1), and (4, −9)
1. One endpoint of a line segment is \((-7, -15)\). The midpoint of the segment is \((-5, -4)\). Find the other endpoint.

2. What is the slope of a line drawn through the midpoint, perpendicular to the segment in Exercise 1?

For Exercises 3–5, a quadrilateral has vertices
\((2, -5), (-8, -5), (-2, 10), \) and \((6, 5)\).

3. Graph the quadrilateral on the grid provided.

4. What type of quadrilateral is this? Justify your answer.

5. What are the coordinates of the midsegment of the figure? What is the slope of the midsegment?

For Exercises 6–8, vertex \(A\) of square \(ABCD\) has coordinates \((-1, 1)\). The coordinates of the intersection of the diagonals is \((2, 4)\).

6. Find the coordinates of vertices \(B, C, \) and \(D\).

7. \(m\angle CAB = \) ________________ 8. slope of \(CA = \) ________________

Use the grid at the right for Exercises 9 and 10. Points \(A, B, \) and \(C\) are three vertices of a parallelogram.

9. How many parallelograms can be formed using these three points? Explain your answer.

10. Give the coordinates of the fourth vertex of the other parallelograms.
8. The figure is a kite. Diagonals are perpendicular and it has a pair of adjacent congruent sides.

Lesson 3.8
Level C

1. \((-3, 7)\)

2. \(-\frac{2}{11}\)

3. \(\text{trapezoid};\) The slopes of one pair of opposite sides are equal.

5. Coordinates: \((2, 7.5)\) and \((-3, -5)\); The slope is \(\frac{5}{2}\).

6. \((5, 1), (5, 7)\) and \((-1, 7)\) respectively.

7. \(45^\circ\)

8. slope = 1

9. three; Sample explanation: There are three points that are possible that will yield two sets of opposite sides with equal slopes.

10. \((0, 5), (-10, -1), \) and \((4, -9)\)
1. Write three different congruence statements about the figures below.

2. Write a congruence statement for the figure at the right.

3. Given the following information, name three pairs of congruent triangles.

\[ \angle ABC \cong \angle BAD, \]
\[ \angle ADB \cong \angle BCA, \]
\[ \angle DAC \cong \angle CBD, \]
\[ \angle ADC \cong \angle BCD, \]
\[ AD \cong BC, \]
\[ AE \cong BE, \] and
\[ ED \cong EC \]

Given that pentagon \( QRSTU \) \( \cong \) pentagon \( JKLNM \), complete the statements.

4. \( \angle S \cong \) \( \) 5. \( \angle T \cong \) \( \) 6. \( \angle K \cong \) \( \) 7. \( \angle J \cong \) \( \)

8. \( \angle N \cong \) \( \) 9. \( \overline{ST} \cong \) \( \) 10. \( \overline{MN} \cong \) \( \) 11. \( \overline{RQ} \cong \) \( \)

Suppose that \( \triangle ABD \cong \triangle FEC \). Find the measure of each.

12. \( \angle E = \) \( \) 13. \( \angle F = \) \( \)

14. \( \angle FCE = \) \( \) 15. \( BD = \) \( \)

16. \( AB = \) \( \) 17. \( FC = \) \( \)

18. \( \angle CGD = \) \( \) 19. \( \angle AGC = \) \( \)
Lesson 4.1
Level A
1. \( \triangle ABC \cong \triangle DEC \)
   \( \triangle BCA \cong \triangle ECD \)
   \( \triangle CAB \cong \triangle CDE \)
2. \( \triangle AFEB \cong \triangle CDEB \)
3. \( \triangle ADC \cong \triangle BCD \)
   \( \triangle DAB \cong \triangle CBA \)
   \( \triangle ADE \cong \triangle BCE \)
4. \( \angle L \)
5. \( \angle M \)
6. \( \angle R \)
7. \( \angle Q \)
8. \( \angle U \)
9. \( \overline{LM} \)
10. \( \overline{TU} \)
11. \( \overline{KJ} \)
12. \( 60^\circ \)
13. \( 75^\circ \)
14. \( 45^\circ \)
15. \( 9 \)
16. \( 6 \)
17. \( 10 \)
18. \( 90^\circ \)
19. \( 90^\circ \)

Lesson 4.1
Level B
1. \( \triangle BAC \cong \triangle DBC \)
   \( \triangle ACB \cong \triangle BCD \)
   \( \triangle CBA \cong \triangle CDB \)
2. \( \triangle ABCDE \cong \triangle RQUTS \)

Lesson 4.1
Level C
1. \( \triangle ABC \cong \triangle RQP \)
2. \( \triangle KLM \cong \triangle RPN \)
3. \( \triangle RNP \cong \triangle EFD \)
4. \( \triangle GHJ \cong \) cannot tell; insufficient information
5. \( \triangle BDE \cong \triangle CAG \)
   \( \triangle BAG \cong \triangle CDE \)
   \( \triangle CFE \cong \triangle BFG \)
   \( \triangle BCE \cong \triangle CBG \)
1. Write three different congruence statements about the figure below.

2. Write a congruence statement for the figures at the right.

Use the given information for Exercises 3–9.
Given: \( \triangle AFG \cong \triangle BFE \) and \( \triangle AEG \cong \triangle BGE \)

3. \( m\angle BFE = \) ________  
4. \( m\angle AEG = \) ________  
5. \( m\angle AGF = \) ________

6. \( BG = \) ________  
7. \( FG = \) ________
8. \( EB = \) ________

9. Are \( \overline{AB} \) and \( \overline{GE} \) parallel? Support your answer.

---

Given that polygon \( BCDEFG \cong \) polygon \( LMNPQR \cong \) polygon \( TVWXYZ \), complete the statements.

10. \( \angle B \cong \) ________ \( \cong \) ________
11. \( \overline{XY} \cong \) ________ \( \cong \) ________

12. \( \overline{VT} \cong \) ________ \( \cong \) ________
13. \( \overline{NM} \cong \) ________ \( \cong \) ________

14. \( \angle Q \cong \) ________ \( \cong \) ________

6. Sometimes, yes if SAS, no if SSA
7. Always, ASA or AAS
Determine whether each pair of triangles can be proven congruent by using the SSS, SAS, or ASA congruence postulate. If so, identify what postulate is used.

1. 
2. 
3. 
4. 

Decide if the statements are always true, sometimes true, or never true. Give the postulate that supports the answer.

5. Two right triangles are congruent if their legs are congruent. 

6. Two triangles are congruent if their corresponding congruent parts include two sides and an angle.

7. Two triangles are congruent if their corresponding congruent parts include two angles and a side.

8. Two right triangles are congruent if a corresponding leg and an acute angle are congruent.

9. Two triangles are congruent if all three corresponding angles are congruent.

For Exercises 10 and 11, \( \triangle CAB \cong \triangle FED \), \( m\angle F = (3x - 11)\degree \), \( m\angle D = (x + y + 7)\degree \).

10. \( x = \) 
11. \( y = \)

Complete the following proof:

## Practice Masters Level B

### 4.3 Analyzing Triangle Congruence

For Exercises 1–6, determine whether the given combination of angles and sides determines a unique triangle. If so, identify the theorem or postulate that supports the answer. If not, give a counter example.

1. $\triangle ABC; m\angle B = 41^\circ$; 
   $m\angle C = 68^\circ; m\angle A = 51^\circ$

2. $\triangle DEF; m\angle E = 90^\circ$; 
   $DE = 16; EF = 12$

3. $\triangle JKL; m\angle J = 38^\circ$; 
   $LK = 4; JK = 7$

4. $\triangle MNO; m\angle O = 90^\circ$; 
   $MN = 8; OM = 5$

5. $\triangle PQR; PR = 7$; 
   $RQ = 8; PQ = 13$

6. $\triangle VWX; m\angle V = 36^\circ$; 
   $VW = 8; WX = 6$

Decide whether the given information is enough to say that $\triangle ABC \cong \triangle DEF$. Identify the theorem or postulate that supports your decision.

7. $\overline{AB} \cong \overline{DE}; \overline{BF} \cong \overline{CE}$; 
   $\overline{AB} \perp \overline{BE}; \overline{DE} \perp \overline{BE}$

8. $\angle DFC \cong \angle ACF$; 
   $\angle A \cong \angle D; \overline{AB} \cong \overline{DE}$

9. $\overline{AC} \cong \overline{DF}; \overline{AB} \cong \overline{DE}$; 
   $\angle B$ and $\angle E = 90^\circ$

10. $\angle AGF \cong \angle DGC$; 
    $\angle A \cong \angle D; \overline{AB} \cong \overline{DE}$

11. $AB \parallel DE; \overline{AB} \perp \overline{BE}$; 
    $\overline{AB} \cong \overline{DE}; \angle GFC \cong \angle GCF$

Complete the following proof.

**Given:** $\overline{XQ} \perp \overline{RQ}; \overline{XT} \perp \overline{ST}$; 
$\overline{RQ} \cong \overline{ST}$

**Prove:** $\triangle RXQ \cong \triangle SXT$

<table>

15. ABCD is a parallelogram.

\[ \triangle AED \cong \triangle CFB, \triangle AEB \cong \triangle CFD, \triangle ADB \cong \triangle CBD \]
ABCD is a parallelogram with diagonals \( BD \) and \( AC \).

1. If \( \angle CBD = 26^\circ \), \( \angle DCA = 72^\circ \), and \( \angle DEC = 81^\circ \). Find \( \angle BAD \). 

2. If \( AC = 3x + 5y \), \( EC = 2x + y \), \( BC = 3x + y \), and \( AD = 5 \). Find the length of \( AC \).

BDEF is a rhombus. Points \( D \), \( E \), and \( F \) are midpoints of \( AB \), \( AC \) and \( BC \), respectively.

3. If \( GE = x + 6 \), \( BE = 16 \), \( DF = 30 \) and \( GF = 2y - x \). Find \( x \) and \( y \).

4. If \( GE^2 + GD^2 = ED^2 \), find the perimeter of \( BDEF \).

ABDE is a parallelogram with \( \overline{BC} \cong \overline{BD} \). Use the diagram for Exercises 5–8.

5. If \( \angle BDC = 58^\circ \), find \( \angle EAB \).

6. If \( \angle DBC = 3x \), \( \angle BCD = 6x \), find \( \angle EAB \).

7. If \( \angle DBC = 3x \), \( \angle BCD = 6x \), find \( \angle ABD \).

8. \( \angle DCB = (3x + 10)^\circ \). Express \( \angle AED \) in terms of \( x \).

Complete the proof.

4.6 Conditions for Special Quadrilaterals

Quadrilateral $ABCD$ has diagonals $AC$ and $BD$ intersecting at $E$. For the conditions given below, state whether the quadrilateral is a rhombus, rectangle, parallelogram, or neither. Then give the theorem or postulate that justifies the conclusion.

1. $BD \perp AC$, $AB \equiv BC$
2. $\angle ABD \equiv \angle CDB$, $\angle ADB \equiv \angle CDB$
3. $\angle DAC \equiv \angle BCA$, $AB \equiv DC$
4. $\triangle ABC \equiv \triangle ADC$, $\triangle ABD \equiv \triangle CDB$
5. $\triangle ABD$ and $\triangle CDB$ are isosceles with vertex angles at $A$ and $C$, respectively.

$ABCD$ is a parallelogram. $AB = 5x$, $BC = 3x - 2.2$, $BE = 4y - 5.5$, $ED = \frac{1}{2}y + 5$, and $AC = 5y - 2$.

6. Find the perimeter of $\triangle DEC$. 
7. Find the area of $ABCD$. 
8. What type of special quadrilateral is $ABCD$?

In $\triangle ABC$, points $D$, $E$, and $F$ are midpoints of $AB$, $BC$, and $AC$, respectively; $DE = 2x + 7$, $AB = 6x - 1$, $EC = 4x - 8$, and $\angle A \equiv \angle C$. Find the following:

9. the perimeter of $DEFA$
10. the perimeter of $AFEB$

In $\triangle ABC$, $DE \parallel CA$ and points $D$ and $F$ are midpoints of $BC$ and $AC$, respectively.

11. If $DE = 13.5$, find the length of $CA$.
12. If $\triangle ABC$ is isosceles with $\angle A \equiv \angle B$, $AB = 113\frac{2}{5}$, and $DE = 43\frac{1}{2}$, find the perimeter of $\triangle ABC$.
13. If $\triangle ABC$ is equilateral, what kind of quadrilateral is $AEDF$? Justify your answer.

Practice Masters Level A

4.7 Compass and Straightedge Constructions

Given lengths \(a\) and \(b\), use a compass and straightedge to construct the following constructions in the space provided.

1. Construct \(a\).
2. Construct \(b\).
3. Construct \(b + a\).
4. Construct \(a - b\).

Given angles \(c\) and \(d\), use a compass and straightedge to complete the constructions.

5. Construct \(\angle c\).
6. Construct \(\angle d\).
7. Construct \(\angle d - \angle c\).
8. Construct \(\frac{1}{2} \angle d\).
9. Construct an equilateral triangle with side \(b\).
10. Construct the angle bisector of \(\angle d\).
Lesson 4.6
Level C

1. neither
2. no conclusion
3. parallelogram; Opposite sides are congruent.
4. parallelogram; Opposite sides are congruent.
5. no conclusion
6. 25 units
7. 60 square units
8. rectangle
9. 88 units
10. 110 units
11. 27
12. $287\frac{2}{5}$
13. rhombus, parallelogram with congruent adjacent sides

Lesson 4.7
Level A

Check student’s constructions.

Lesson 4.7
Level B

Check student’s constructions.

Lesson 4.7
Level C

Check student’s constructions.

Lesson 4.8
Level A

1. 
2. 
3. 
4. 
5. 
6. 
7. Yes, the sum of the two smaller sides is greater than the largest side.
8. No, the sum equals the third side.
9. Yes, the sum of two smallest sides is greater than the third side.
10. No, the sum equals the third side.
11. No, the sum of the two smallest sides is less than the third side.
12. Yes, the sum of the two smaller sides is greater than the third side.
13. No, the sum of the two smallest sides is less than the third side.
Given lengths $a$ and $b$ and angles $c$ and $d$, use a compass and straightedge to construct the following constructions in the space provided.

1. Construct an isosceles triangle with base $a$ and altitude $b$.
2. Construct a square with sides $b$.
3. Construct a right triangle with leg $b$ and acute angle $c$.
4. Construct parallel lines that are $b$ distance apart.
5. Construct a rectangle with one side length $b$ and diagonal of length $a$.
6. Construct a rhombus with one angle $d$ and sides of length $b$.
7. Construct a kite with one pair of sides of length $a$ and the other pair of sides of length $c$.
8. Construct an obtuse triangle using $a$ and $b$ for two sides, and angles $c$ and $d$ for two angles.
Lesson 4.6
Level C
1. neither
2. no conclusion
3. parallelogram; Opposite sides are congruent.
4. parallelogram; Opposite sides are congruent.
5. no conclusion
6. 25 units
7. 60 square units
8. rectangle
9. 88 units
10. 110 units
11. 27
12. $287\frac{2}{5}$
13. rhombus, parallelogram with congruent adjacent sides

Lesson 4.7
Level A
Check student’s constructions.

Level C
Check student’s constructions.

Lesson 4.8
Level A
1. 
2. 
3. 
4. 
5. 
6. 
7. Yes, the sum of the two smaller sides is greater than the largest side.
8. No, the sum equals the third side.
9. Yes, the sum of two smallest sides is greater than the third side.
10. No, the sum equals the third side.
11. No, the sum of the two smallest sides is less than the third side.
12. Yes, the sum of the two smaller sides is greater than the third side.
13. No, the sum of the two smallest sides is less than the third side.
Given lengths \(a, b,\) and \(c,\) and angles \(d, e,\) and \(f,\) use a compass and straightedge to construct the following constructions in the space provided.

1. Construct a right triangle with hypotenuse \(a\) and one leg \(c.\)

2. Construct an isosceles triangle with base of length \(a\) and base angles that measure \(c.\)

3. Construct a parallelogram with sides of length \(a\) and \(b,\) and one pair of angles that measure \(d.\)

4. Construct parallel lines so that alternate interior angles measure \(c.\)

5. Construct a right triangle with a smaller leg of length \(a.\) Construct the circumscribed circle.

6. Construct an obtuse triangle with one angle of measure \(d\) and a smallest side of length \(a.\) Construct the inscribed circle.
Lesson 4.6
Level C

1. neither
2. no conclusion
3. parallelogram; Opposite sides are congruent.
4. parallelogram; Opposite sides are congruent.
5. no conclusion
6. 25 units

1. 
2. 
3. 
4. 
5. 
6. 
7. Yes, the sum of the two smaller sides is greater than the largest side.
8. No, the sum equals the third side.
9. Yes, the sum of two smallest sides is greater than the third side.
10. No, the sum equals the third side.
11. No, the sum of the two smallest sides is less than the third side.
12. Yes, the sum of the two smaller sides is greater than the third side.
13. No, the sum of the two smallest sides is less than the third side.
Translate each figure below by the direction and distance of the given translation vector.

1.  
2.  
3.  

Reflect the figure over the given line.

4.  
5.  
6.  

State whether each triangle described below is possible. Explain the reason for your answer.

7. \(AB = 11, BC = 8, CA = 6\)  
8. \(GH = 21, HJ = 5, GJ = 16\)  
9. \(KL = 9, LM = 4, MK = 6\)  
10. \(WX = 11, XY = 4, WY = 7\)  
11. \(MN = 24, MO = 12, NO = 10\)  
12. \(FG = 3, GH = 4, FH = 5\)  
13. \(JK = 31, JL = 17, KL = 4\)
Lesson 4.6

Level A

1. 
2. 
3. 
4. 
5. 
6. 

7. Yes, the sum of the two smaller sides is greater than the largest side.
8. No, the sum equals the third side.
9. Yes, the sum of two smallest sides is greater than the third side.
10. No, the sum equals the third side.
11. No, the sum of the two smallest sides is less than the third side.
12. Yes, the sum of the two smaller sides is greater than the third side.
13. No, the sum of the two smallest sides is less than the third side.
Reflect each figure below across the given line.

1. 

2. 

3. 

Rotate the segment about the given point by the angle below it.

4. 

5. 

6. 

For Exercises 7–12, state the two values the length of the third side of the triangle must be between, to make the triangle possible.

7. \( AB = 5, BC = 9, AC = \) __________

8. \( WX = 132, XY = 417, WY = \) __________

9. \( DE = 11.4, EF = 4.2, DF = \) __________

10. \( GH = \frac{3}{4}, HJ = \frac{9}{8}, GJ = \) __________

11. \( LM = \sqrt{27}, NL = 5\sqrt{3}, MN = \) __________

12. \( PQ = 0.03, RP = 0.11, PR = \) __________

13. In \( \triangle PQR \) shown, what values are possible for \( PQ \)?

\[ \] __________

14. Write a paragraph proof.

**Given:** \( \triangle ABC \), with \( AB + BC = AC \)

**Prove:** \( ABC \) is not a triangle.

\[ \] __________

\[ \] __________

\[ \] __________
Answers

Lesson 4.8
Level B

1. 

2. 

3. 

4. 

5. 

6. 

7. $4 < AC < 14$
8. $285 < WY < 549$
9. $7.2 < DF < 15.6$
10. $5 \frac{5}{8} < GJ < 13 \frac{1}{8}$
11. $2\sqrt{3} < MN < 8\sqrt{3}$
12. $0.08 < PR < 0.14$
13. $2 < PQ < 16$
14. If the sum of the lengths of $AB$ and $BC$ is equal to the length of the third segment $AC$, which is given, then the endpoints are collinear by the Betweenness Postulate and thus $ABC$ is not a triangle.

Lesson 4.8
Level C

1. 

2. 

3. 

4. 

5. yes
6. $4 < x < 18$
7. $1 < x < 4$
Translate the figure, the direction and distance of the given translation vector. Then rotate the figure $180^\circ$ around $P$.

1.  

2.  

Rotate the figure $180^\circ$ around $P$. Then translate the figure, the direction and distance of the given translation vector.

3.  

4.  

5. Based on Exercises 1–4, are translations and rotations commutative? ________________

For each triangle below, determine the largest and smallest possible values for $x$.

6. $AB = 7, BC = x, AC = 11$ ________________

7. $DE = 2x, DF = 3, EF = 5$ ________________

8. $GH = 17, HJ = 2x, GJ = x$ ________________

9. $KL = 2x, LM = 8x, KM = 12$ ________________

In each figure below, decide between what two values $AB$ must fall.

10. $AB = $ ________________

11. $AB = $ ________________

12. $AB = $ ________________

13. $AB = $ ________________
1. If the sum of the lengths of \( \overline{AB} \) and \( \overline{BC} \) is equal to the length of the third segment \( \overline{AC} \), which is given, then the endpoints are collinear by the Betweeness Postulate and thus \( ABC \) is not a triangle.

13. \( 2 < PQ < 16 \)

14. If the sum of the lengths of \( \overline{AB} \) and \( \overline{BC} \) is equal to the length of the third segment \( \overline{AC} \), which is given, then the endpoints are collinear by the Betweeness Postulate and thus \( ABC \) is not a triangle.

7. \( 4 < AC < 14 \)
8. \( 285 < WY < 549 \)
9. \( 7.2 < DF < 15.6 \)
10. \( \frac{5}{8} < GJ < \frac{13}{8} \)
11. \( 2\sqrt{3} < MN < 8\sqrt{3} \)
12. \( 0.08 < PR < 0.14 \)
8. \( \frac{2}{3} < x < 17 \)

9. \( \frac{1}{5} < x < 2 \)

10. \( 1 < AB < 10 \)

11. \( 4 < AB < 12 \)

12. \( 3 < AB < 22 \)

13. \( 0.9 < AB < 15.5 \)
For each figure below, determine the measure of the perimeter and area.

1. Perimeter ________ Area ________  
2. Perimeter ________ Area ________

3. Perimeter ________ Area ________  
4. Perimeter ________ Area ________

For Exercises 5–8, use the figure to find the indicated perimeters and areas. ADKQ measures 20-inch-by-20-inch.

5. the perimeter of ADKQ ________  
6. the area of ADKQ ________
7. the perimeter of NGJRLM ________  
8. the area of NGJRLM ________

The perimeter of a rectangle is 12 meters. If the side lengths are given by integers, find all possible dimensions, and determine the area of each.

17. 6 feet, 8 feet, 28 feet

Lesson 5.2
Level A

1. $A = lw$, 84 square units
2. $A = \frac{1}{2}bh$, $\frac{7}{2}$ square units
3. $A = bh$, 390 square units
4. $A = \frac{1}{2}h(b_1 + b_2)$; 48 square units
For each figure below, determine the measure of the perimeter and area.

1. Perimeter = ____  Area = ____  2. Perimeter = ____  Area = ____

For Exercises 3–10, use the figure and measures to find the indicated perimeters and areas. In $ACDM$, $AB = 27$, $BC = CD = 18$, $AP = PN = 6$, $MH = 9$, $TR = 3$ and $HT = 15$.

3. the perimeter of $ACDM$  ______________
4. the area of $ACDM$  ______________
5. the perimeter of $PABETV$  ______________
6. the area of $PABETV$  ______________
7. the area of $GBAMTRJL$  ______________
8. the perimeter of $GBAMTRJL$  ______________
9. Draw $\triangle BPF$. What is its area?  ____________________________
10. Draw pentagon $BNREC$. What is its area?  ____________________________

Complete the table to determine the possible perimeters that produce a rectangle with an area of 24 square units. The side lengths are all given by integers.

4. \( A = \frac{1}{2}h(b_1 + b_2); 48 \) square units
Find the area of each figure. Give the formula that you used to find the area.

1. \[
\begin{align*}
\text{Formula: } & \quad \frac{1}{2} \times \text{base} \times \text{height} \\
\text{Area: } & \quad \frac{1}{2} \times 12 \times 7 \\
\end{align*}
\]

2. \[
\begin{align*}
\text{Formula: } & \quad \frac{1}{2} \times \text{base} \times \text{height} \\
\text{Area: } & \quad \frac{1}{2} \times 11 \times 5 \\
\end{align*}
\]

3. \[
\begin{align*}
\text{Formula: } & \quad \text{base} \times \text{height} \\
\text{Area: } & \quad 15 \times 26 \\
\end{align*}
\]

4. \[
\begin{align*}
\text{Formula: } & \quad \frac{1}{2} \times \text{base} \times \text{height} \\
\text{Area: } & \quad \frac{1}{2} \times 10 \times 6 \\
\end{align*}
\]

5. \[
\begin{align*}
\text{Formula: } & \quad \frac{1}{2} \times \text{base} \times \text{height} \\
\text{Area: } & \quad \frac{1}{2} \times 8 \times 2.5 \\
\end{align*}
\]

6. \[
\begin{align*}
\text{Formula: } & \quad \frac{1}{2} \times \text{base} \times \text{height} \\
\text{Area: } & \quad \frac{1}{2} \times 18 \times 28 \\
\end{align*}
\]

7. \(\triangle ABC\) is a right triangle with one leg 12, one leg 16 and a hypotenuse of 20. Find the area of the triangle.

8. Parallelogram \(FGHJ\) has sides of 7.3 and 4.6. If its height to the shorter side is 3, what is the area?

9. A trapezoid has bases of 15 and 8, legs of 7 and 9, and a height of 6. What is the area of the trapezoid?

10. In \(\triangle WXY\), the base is 11 and the area is 55. What is its height?

11. The area of a parallelogram is 15. If the height is 2.5, what is the length of one of the sides?

Find the indicated measures in trapezoid \(ABDC\).

12. \(AB = 17\)
   \[
   \begin{align*}
   BG & = 10 \\
   \text{Area } ABDC & = 200 \text{ units}^2 \\
   \text{Find } CD. & \quad \text{Find } BG. \\
   \end{align*}
   \]

13. \(AB = 3.3\)
   \[
   \begin{align*}
   CD & = 8.1 \\
   \text{Area } ABCD & = 42.75 \text{ units}^2 \\
   \end{align*}
   \]

11. 122.5 square units
12. 107.5 square units
13. 13 feet

Lesson 5.2
Level C

1. 36 units
2. 1350 square units
3. 486 square units
4. 13
5. 18
6. 9 units by 11 units
7. 77 square units
8. 7 units
9. 13 units
10. 3 units
11. 24 units
12. 432 square units
13. 384 square units

Lesson 5.3
Level A

1. $\frac{17}{\pi} \approx 5.4$
2. $\frac{27}{8\pi} \approx 1.1$
3. $\sqrt{\frac{23.78}{\pi}} \approx 2.75$
Find the area of each figure. Give the formula that you used to find the area.

1. **Formula:** \( \text{Area} = \frac{1}{2} \times \text{base} \times \text{height} \)
   **Area:** 15

2. **Formula:** \( \text{Area} = \frac{1}{2} \times \text{base} \times \text{height} \)
   **Area:** 7.6

3. **Formula:** \( \text{Area} = \frac{1}{2} \times (b_1 + b_2) \times h \)
   **Area:** 16.7

4. The area of \( \triangle GHJ \) is 24 m\(^2\). If the height is 8 m, what is the length of the base?
   **Length of base:** 3 m

5. The area of a parallelogram is 12 m\(^2\). If one side measures \(3\frac{1}{2}\) m, what is the height?
   **Height:** 4 m

6. Trapezoid \( ABCD \) has an area of 36 m\(^2\), a smaller base of 4 m and a height of 6 m. How long is the other base?
   **Other base:** 8 m

In \( ABCD \), \( BE = BC, FB = 11, AD = 12, FD = 10, EC = 5\frac{1}{2} \), and \( DC = 13\frac{1}{2} \). Find the area of each figure.

7. \( ABCD \)
   **Area:** 7.6

8. \( \triangle FDA \)
   **Area:** 8.7

9. \( FBED \)
   **Area:** 5.1

10. \( \triangle BEC \)
    **Area:** 7.6

11. \( FBCD \)
    **Area:** 15

12. \( ABED \)
    **Area:** 11.8

13. In \( \triangle ABC \) with altitude \( BD \), the area is 91 ft\(^2\), the altitude is \(3x + 7\) ft, and the base measures 14 ft. Find the length of the altitude.
    **Altitude:** 10 ft

In quadrilateral \( ABED \), \( AB \parallel DC, AB = 24, BE = 30, \) and \( BC = 18 \).
Find the measures and areas for each problem below.

14. area of \( \triangle ADC \)
    **Area:** 20

15. area of \( \triangle BCE \)
    **Area:** 15

16. area of \( ABCD \)
    **Area:** 24

17. area of \( ABED \)
    **Area:** 30

18. area of \( ABEC \)
    **Area:** 36
Lesson 5.2
Level B

1. \( A = \frac{1}{2} bh \); 32.1 square units
2. \( A = \frac{1}{2} h(b_1 + b_2) \); 38.8 square units
3. \( A = bh \); 200 square units
4. 6 meters
5. \( \frac{3}{7} \) meters
6. 8 meters
7. 135 square units
8. \( 12\frac{1}{2} \) square units
9. 95 square units
10. 27.5 square units
11. 122.5 square units
12. 107.5 square units
13. 13 feet

Lesson 5.3
Level A

1. \( \frac{17}{\pi} \approx 5.4 \)
2. 5
3. \( \frac{27}{8\pi} \approx 1.1 \)
4. \( \sqrt{\frac{23.78}{\pi}} \approx 2.75 \)
In figure $ABCD$, the ratio of $AB:BC:CD:DA = 20:15:9:16$. The perimeter of the figure is 180 units.

1. Find $BD$. ________________
2. Find the area of $\triangle ABC$. ________________
3. Find the area of $\triangle BDC$. ________________

In trapezoid $GHJK$, $KJ = x^2 + 2$, $GH = 3x + 1$, $GK = 6$, and the area of $GHJK = 93$ square meters.

4. Find $GH$. ________________
5. Find $KJ$. ________________

In $ABCD$, $AB = 4x - 1$, $BC = 2x + 3$, $AE = 7$, and the perimeter of $ABCD$ is 40 units.

6. Find the dimensions of $ABCD$. ______
7. Find the area of $ABCD$. ________________

In trapezoid $WXYZ$, altitude $WV = x$, base $WX = 2x + 1$, base $ZY = 6x - 5$, and the area of $WXYZ$ equals 30 square units.

8. Find $WX$. ________________
9. Find $ZY$. ________________
10. Find altitude $WV$. ________________

The area of $\triangle ADE = 48$ square units, $AD = 10$, $DE = 12$, and the ratio of $DE:BC = 1:3$.

11. Find the altitude of $\triangle ABC$. ________________
12. Find the area of $\triangle ABC$. ________________
13. Find the area of quadrilateral $DECB$. ___
Lesson 5.2
Level B

1. $A = \frac{1}{2}bh$; 32.1 square units
2. $A = \frac{1}{2}h(b_1 + b_2)$; 38.8 square units
3. $A = bh$; 200 square units
4. 6 meters
5. $\frac{3}{7}$ meters

11. 24 units
12. 432 square units
13. 384 square units

Lesson 5.3
Level A

1. $\frac{17}{\pi} \approx 5.4$
2. 5
3. $\frac{27}{8\pi} \approx 1.1$
4. $\sqrt{\frac{23.78}{\pi}} \approx 2.75$
Find the radius of the circle with the given measurements. Give your answers exactly, in terms of $\pi$, and rounded to the nearest tenth.

1. $C = 34$  
2. $A = 25\pi$

3. $C = \frac{3}{4}$  
4. $A = 23.78$

5. $A = 157$  
6. $A = 314$

7. What happens to the radius of a circle whose area is halved? See Exercises 5 and 6 to help you with your answer.

In Exercises 8–10, find the circumference and area of each circle. Use 3.14 for $\pi$.

8. $r = 7$  
9. $r = 12$  
10. $r = 6$

11. What happens to the area of a circle whose radius is halved? Compare Exercises 9 and 10 to help you with your answer.

12. What is the area of a round table top with a radius of 2 feet? Will a 15 square foot piece of glass be too large for the table, too small, or fit it perfectly?

For Exercises 13–15, find the exact area of the shaded region.

13. 
14. 

15. 

16. Which shaded area is greater, the area inscribed in the square from Exercise 14 or the shaded area of the four circles from Exercise 15?
5. \( A = \frac{1}{2} h(b_1 + b_2); 32 \text{ square units} \)

6. \( A = 2 \left( \frac{1}{2} h(b_1 + b_2) \right); 441 \text{ square units} \)

3. $a = \hspace{1cm} b = \frac{3}{4} \hspace{1cm} c = 1$

4. $a = \hspace{1cm} b = \sqrt{2} \hspace{1cm} c = \sqrt{6}$

5. $a:b = 1:3 \hspace{1cm} c = 5 \hspace{1cm} a = \hspace{1cm} b = \hspace{1cm}$

6. $a:b = 1:2 \hspace{1cm} c = 4\sqrt{3} \hspace{1cm} a = \hspace{1cm} b = \hspace{1cm}$

Decide whether each set of numbers can represent the side lengths of a right triangle.

7. 6, 27, 30

8. 50, 50, 60

9. 14, 48, 52

Solve.

10. A rectangle has a perimeter of 20 and a width of 4. Find the length of its diagonal.

11. The altitude of an equilateral triangle is 12. What is its perimeter?

12. The diagonals of a rhombus are in a 2:1 ratio. If the perimeter of the rhombus is 40, find the length of each diagonal.

For Exercises 13–14, refer to $\triangle ABC$ with altitude $\overline{BD}$.

13. If $AB = x + 3$, $BC = 3x$, and $AC = 17$. Find the area of $\triangle ABC$.

14. If the ratio of $BC:AB$ is 3:4 and $AC = 10\sqrt{3}$, find the area of $\triangle ABC$. 
13. 17.5 inches
14. 18.5 inches

Lesson 5.4

9. $4\sqrt{15}$
10. 15
11. $3\sqrt{3}$
12. $9\sqrt{3}$ square units

Lesson 5.5
Level B

1. 4, $2\sqrt{3}, 6, 2, 4\sqrt{3}$
2. 4, $\sqrt{3}, 3, 1, 2\sqrt{3}$
3. $\frac{\sqrt{3}}{3}, \frac{8\sqrt{3}}{3}, 4\sqrt{3}, \frac{4\sqrt{3}}{3}, 8$
1. The side of a square equals the diagonal of a second square. What is the ratio of the perimeter of the larger square to that of the smaller square?

2. The ratio of the sides of a triangle are 5:13:12. If the perimeter is 15, what is the area of the triangle?

3. What kind of triangle, right, acute, or obtuse, has sides of 4, $4\sqrt{2}$, and 6?

4. Find the length of a leg of a right triangle if the second leg measures $\frac{1}{2}$ and the hypotenuse is $\frac{5}{8}$.

5. One leg of a right triangle, $\overline{AB}$, measures $x + 1$, the other leg measures $4x$, and the hypotenuse is $4x + 1$. Find the indicated measure.

   5. $\overline{AB}$

   6. $\overline{BC}$

   7. Area of $\triangle ABC$

   8. $\overline{AC}$

In $\triangle WXY$ with altitude $\overline{YZ}$, $XY = 6$, and $XZ = 2$. Find the indicated measure.

9. $\overline{YZ}$

10. $\overline{WY}$

11. $\overline{WZ}$

12. $\overline{WX}$

In isosceles trapezoid $ABCD$, base $DC$ measures 35, the height is 12, and $\overline{AD} = \overline{BC} = 15$.

13. Find the area of $\overline{ABCD}$.

14. Find the area of $\triangle DBC$.

15. A man travels 5 miles north, then 2 miles east, followed by 1 mile north and then 4 miles east. How far is he from his starting point?

16. Find the length of each side of a cube if the diagonal of one face is 8.
13. 17.5 inches
14. 18.5 inches

Practice Masters Level C
5.5 Special Triangles and Areas of Regular Polygons

In \(\triangle ABC\), \(m\angle ABC = 90^\circ\) and \(AC = 16\).

1. Find \(BC\). 
2. Find \(BD\). 
3. Find \(DC\).

\(\triangle PQR\) and \(\triangle PSR\) are right triangles, that are also perpendicular to each other. \(QR = 10\), \(m\angle QRP = 45^\circ\) and \(m\angle SRP = 60^\circ\).

4. \(SP = \) 
5. \(SR = \) 
6. \(QP = \) 
7. \(PR = \)

8. Find the area of a regular hexagon with a radius of \(7\sqrt{3}\) units.

\(\triangle ABC\) has altitude \(BD\). Find the following measures in terms of \(x\).

9. \(AB\) 
10. \(AC\) 
11. \(AD\) 
12. \(BC\)
13. area of \(\triangle BDC\)
14. area of \(\triangle BDA\)
15. area of \(\triangle ABC\)

The figure below is a rectangular box. For Exercises 16–18, leave answers in simplest radical form.

16. If \(EH = 6\), \(GH = 2\), \(DH = 4\), find the length of diagonal \(CE\).
17. If \(EH:HG:DH\) is 3:4:12 and \(CE = 26\), find:
   a. \(EH\) 
   b. \(HG\) 
   c. \(DH\) 
   d. \(GE\)
18. If \(EH = GH = DH = 4\), find \(GE\).

3. \( \sqrt{37} \)

4. acute

5. \( 5\sqrt{2} \)

6. \( \sqrt{89} \)

7. obtuse

8. parallelogram; The distance between corresponding points is the same, so \( HF = CD, \text{ and } HC = FD. \)
1. Suppose $\overline{AC}$ has a length of 5. If $A$ has the coordinates $(5, 1)$ and $C$ has the coordinates $(8, y)$, find $y$. 

2. Suppose $\overline{WZ}$ has a length of 5. If $Z$ has the coordinates $(2, 6)$, and $W$ has the coordinates $(x, 3)$, find $x$. 

3. The midpoint of $\overline{HJ}$ is $(6, -1)$. If $H$ has coordinates $(2, -3)$, what are the coordinates of $J$? 

4. The midpoint of $\overline{PQ}$ is $(-\frac{3}{2}, -2)$. If $P$ has coordinates $(4, 4)$, what are the coordinates of $Q$? 

5. One leg of an isosceles triangle has coordinates $(2, 4)$ at the vertex and $(-2, 1)$ at the base. Find the coordinates of the third point if it lies on the x-axis. 

For Exercises 6–11, refer to the graph.

6. Find the area of $\triangle ABC$. 

7. Find the area of $\triangle DEF$. 

8. What do you notice about the triangles in Exercises 6 and 7? 

9. Find the area of $\triangle GHJ$. 

10. Find the area of $\triangle HMK$. 

11. How do $\triangle GHJ$ and $\triangle HMK$ compare? 

12. Use the integral $x$-values from $-2$ to 6 to find and graph points for $y = \frac{1}{4}(x - 2)^2 + 6$. Then find the area from the curve to the x-axis between $-2$ and 6.
8. $\approx 56$

9. $\approx 30$ square units

10. $\approx 14$ square units

11. $\sqrt{20}$

Lesson 5.6
Level B

1. $2\sqrt{5}$

2. 5

3. $\sqrt{37}$

4. acute

5. $5\sqrt{2}$

6. $\sqrt{89}$

7. obtuse

8. parallelogram; The distance between corresponding points is the same, so $HF = CD$, and $HC = FD$.

Lesson 5.6
Level C

1. 5 or $-3$

2. 6 or $-2$

3. (10, 1)

4. $(-11, -8)$

5. (5, 0)

6. 13

7. 13

8. congruent, right, isosceles

9. 12
10. 4
11. GHJ is larger than HMK, but both are isosceles triangles.
12. $y$-values are $10, \frac{1}{4}, 7, \frac{1}{4}, 7, \frac{1}{4}, 10$

\[
A \approx 58 \frac{1}{2}
\]

Lesson 5.7
Level A
1. $(2a, 0)$
2. $N(0, -2a) \quad P(-q, 0)$
3. $D(a, 0), B(b, c)$
4. $Q(p, q), W(b, 0)$
5. congruent
6. $(1, 3)$
7. $(2, -3)$
8. reverse

Lesson 5.7
Level B
1. $(a + c, b + d)$
2. $(c, d)$
3. $-\frac{b}{a}$
4. $-\frac{b}{a}$

Lesson 5.7
Level C
1. $D(-2, 1), E(3, 0);$ slopes equal $-\frac{1}{5}$
\[
DE = \sqrt{26} \quad AC = 2\sqrt{26}
\]
2. $\sqrt{13}$
3. $\sqrt{65}$
4. $\sqrt{65}$
5. $\sqrt{13}$
6. kite

5. They are parallel
6. $\sqrt{c^2 + d^2}$
7. $CB = 2\sqrt{c^2 + d^2}$
   It is one-half of $CB$.
8. It is parallel to the third side and equal to one-half its length
9. $EF = HG = a$
   $EH = FG = \sqrt{b^2 + c^2}$
   $EG = EG$
   $\therefore$ the triangles are congruent by SSS.
10. Using the distance formula, the diagonal $JL$ and $KM$ both equal $\sqrt{2a^2}$, so the diagonals are congruent.
11. The congruent diagonals intersect at the midsegment of each diagonal. Therefore, the diagonals of a square bisect each other into two congruent segments.
12. The two diagonals have slopes that are negative reciprocals of each other. Therefore, they are perpendicular to each other.
13. perpendicular; $-1$
Determine the coordinates of the unknown vertex or vertices of each figure below.

1. isosceles triangle \(GJH\)  \(G(0, 0), J(a, q), H(?, ?)\)

2. rhombus \(LMNP\)  \(L(-q, 3a), M(0, a), N(?), P(?, ?)\)

3. parallelogram \(ABCD\)  \(A(0, 0), B(?, ?), C(a + b, c)\)

4. trapezoid \(TQRW\)  \(T(a, q), R(0, 0), Q(?), W(?), ?)\)

5. In Exercise 3, what is the relationship between \(\overline{DB}\) and \(\overline{AC}\)?

What can you conclude about the diagonals of a parallelogram? __________________________

Use the diagram for Exercises 6 and 7.

6. If point \(P_1\) is the reflection of \(P_2\) across the line \(y = x\), what are the coordinates of \(P_1\)? ____________________________

7. If the coordinates of \(P_3\) are the reflection of \(P_4\) across the line \(y = x\), what are the coordinates of \(P_3\)? ____________________________

Fill in the blank.

8. To reflect a point across the line \(y = x\), you _________________ the \(x\)- and \(y\)-coordinates of the point.
10. 4

11. \( GHJ \) is larger than \( HMK \), but both are isosceles triangles.

12. \( y \)-values are \( 10, \frac{1}{4}, 7, \frac{1}{4}, 6, \frac{1}{4}, 7, \frac{1}{4}, 10 \)
\[
A \approx 58\frac{1}{2}
\]

Lesson 5.7
Level A

1. \((2a, 0)\)
2. \(N (0, -2a) \ P (-q, 0)\)
3. \(D (a, 0), B (b, c)\)
4. \(Q (p, q), W (b, 0)\)
5. congruent
6. \((1, 3)\)
7. \((2, -3)\)
8. reverse

Lesson 5.7
Level B

1. \((a + c, b + d)\)
2. \((c, d)\)
3. \(\frac{b}{a}\)
4. \(\frac{b}{a}\)

Lesson 5.7
Level C

1. \(D (-2, 1), E (3, 0); \) slopes equal \(-\frac{1}{5}\)
\[
DE = \sqrt{26} \quad AC = 2\sqrt{26}
\]
2. \(\sqrt{13}\)
3. \(\sqrt{65}\)
4. \(\sqrt{65}\)
5. \(\sqrt{13}\)
6. kite
Refer to the diagram for Exercises 1–8.

1. Find the midpoint of $AB$. 
2. Find the midpoint of $AC$. 
3. Find the slope of the segment joining the midpoints of $AB$ and $AC$. 
4. Find the slope of $CB$. 
5. What can be concluded about the segment joining the midpoints of these two sides of the triangle? 
6. Find the length of the segment joining the midpoints of $AB$ and $CB$. 
7. How does this compare to the length of $CB$? 
8. Generalize about the segment joining any midpoints of two sides of a triangle. 

9. $EFGH$ is a parallelogram with diagonal $EG$. Use distance and/or slope formulas to show that the diagonal of a parallelogram divides it into two congruent triangles.

$JKLM$ is a square with diagonals $JL$ and $KM$. Use distance and/or slope formulas to prove each statement.

10. Diagonals are congruent. 
11. Diagonals bisect each other. 
12. Diagonals are perpendicular to each other. 

13. To reflect point $A$ across the line $y = x$, you can reverse the $x$- and $y$-coordinates of point $A$ to obtain $A'$. The line joining points $A$ and $A'$ is ____________ with a slope of ________________.
10. $4$

11. $GHJ$ is larger than $HMK$, but both are isosceles triangles.

12. $y$-values are $10, \frac{1}{4}, 7, 6, \frac{1}{4}, 7, 8, \frac{1}{4}, 10$

$$A \approx 58\frac{1}{2}$$

Lesson 5.7

Level A

1. $(2a, 0)$

2. $N(0, -2a) P(-q, 0)$

3. $D(a, 0), B(b, c)$

4. $Q(p, q), W(b, 0)$

5. congruent

6. $(1, 3)$

7. $(2, -3)$

8. reverse

Lesson 5.7

Level B

1. $(a + c, b + d)$

2. $(c, d)$

3. $\frac{b}{a}$

4. $\frac{b}{a}$

5. They are parallel

6. $\sqrt{c^2 + d^2}$

7. $CB = 2\sqrt{c^2 + d^2}$

   It is one-half of $CB$.

8. It is parallel to the third side and equal to one-half its length

9. $EF = HG = a$

   $EH = FG = \sqrt{b^2 + c^2}$

   $EG = EG$

   \therefore the triangles are congruent by SSS.

10. Using the distance formula, the diagonal $JL$ and $KM$ both equal $\sqrt{2a^2}$, so the diagonals are congruent.

11. The congruent diagonals intersect at the midsegment of each diagonal. Therefore, the diagonals of a square bisect each other into two congruent segments.

12. The two diagonals have slopes that are negative reciprocals of each other. Therefore, they are perpendicular to each other.

13. perpendicular; $-1$

Lesson 5.7

Level C

1. $D(-2, 1), E(3, 0); \text{slopes equal } -\frac{1}{5}$

   $DE = \sqrt{26}$

   $AC = 2\sqrt{26}$

2. $\sqrt{13}$

3. $\sqrt{65}$

4. $\sqrt{65}$

5. $\sqrt{13}$

6. kite
1. Determine the coordinates of the endpoints of midsegment $DE$ that joins $AB$ and $BC$. Show that the midsegment is parallel to $AC$ and half its length.

Refer to the diagram for Exercises 2–13.

2. Find the length of $PQ$. ________________

3. Find the length of $QR$. ________________

4. Find the length of $RS$. ________________

5. Find the length of $SP$. ________________

6. What kind of quadrilateral is $PQRS$? ______

7. What is true about the diagonals of the figure? Show that this is true using coordinate geometry. ________________

8. Reflect $SPQR$ across the line $y = x$. What are the new coordinates? ________________

9. Find the length of $P'Q'$. ________________

10. Find the length of $Q'R'$. ________________

11. Find the length of $R'S'$. ________________

12. Find the length of $S'P'$. ________________

13. What kind of quadrilateral is $P'Q'R'S'$? ________________

14. Use the distance/slope formulas to show that the diagonals of a rhombus divide it into four congruent triangles.
Answers

10. 4

11. GHJ is larger than HMK, but both are isosceles triangles.

12. \(y\)-values are \(10, \frac{8}{4}, 7, \frac{6}{4}, 7, \frac{8}{4}, 10\)
   
   \[ A \approx 58 \frac{1}{2} \]

Lesson 5.7

Use the points on the number line for Exercises 1–3.

1. Find the probability that a point on $\overline{AG}$ lies between $C$ and $F$. 

2. Find the probability that a point on $\overline{AG}$ lies between $G$ and $B$. 

3. Find the probability that a point on $\overline{BF}$ lies between $E$ and $G$. 

Refer to the rectangular field for Exercises 4–8.

4. A rectangular field measures 27 feet by 15 feet. Find the area of the field. 

5. A small shed is on the field. Its dimensions are 8 feet by 10 feet. What is its area? 

6. What is the probability that a single drop of rain that lands in the field would hit the shed? 

7. What is the probability that a single drop of rain that lands in the field would not hit the shed? 

8. There is a large oak tree in one corner whose branches have a diameter of 20 feet. What is the probability that a single drop of rain that lands in the field would miss both the shed and the tree? (Assume the shed is not under the tree.) 

The box below has been divided into rectangles of equal area. Refer to the box for Exercises 9–10.

9. a. If only the first column is darkened, what fraction of the entire box has been darkened? 

   b. What percentage is this? 

   c. What decimal portion is this? 

10. Find the probability that a small grain of rice, randomly tossed onto the grid, will land in a clear box? 

For each number below, change to a decimal probability.

11. 65% 

12. $\frac{3}{8}$ 

13. 0.25% 

14. $\frac{5}{12}$ 

For each number below, change to a fractional probability.

15. 0.45 

16. 87.5% 

17. 17.5% 

18. 0.125
7. diagonals are perpendicular
   \[ \frac{10}{-2} \cdot \frac{1}{5} = -1 \]

8. \[

Use the points on the number line for Exercises 1–7.

1. Find the probability that a point on HR lies between J and P. ____________
2. Find the probability that a point on HR lies between N and K. ____________
3. Find the probability that a point on MN lies between J and K. ____________
4. Find the probability that a point on LQ lies between M and P. ____________
5. The probability that a point on JR lies between ________ and ________ is 25%.
6. The probability that a point on JO lies between ________ and ________ is 0.50.
7. The probability that a point on KP lies between ________ and ________ is \(\frac{3}{4}\).

A dartboard is made up of concentric circles with the following radii:
- Circle A: \(r = 2\) inches
- Circle B: \(r = 4\) inches
- Circle C: \(r = 6\) inches
- Circle D: \(r = 10\) inches

8. Find the area of circle A. ______________
9. Find the area of circle B that is not covered by circle A. ______________
10. Find the area of circle C that is not covered by circle A or B. ______________
11. Find the area of the dartboard that is not covered by circles A, B, or C. ______________

The circles on the dartboard are painted on a rectangular piece of corkboard that is 2 feet by 30 inches. Find the probability of each event, assuming the dart lands on the corkboard.

12. A random dart lands on one of the circles. ______________
13. A random dart lands on circle C or D. ______________
14. A random dart will make a bull’s-eye. ______________
15. A random dart falls only on circle C. ______________

5.8 Geometric Probability

A circular spinner is divided into 8 equal sections. The radius of the circle is 12 inches. Find each probability.

1. \(P\) (green)  
2. \(P\) (not gray or teal)  
3. \(P\) (not blue)  
4. \(P\) (teal, white, green, blue)  
5. \(P\) (green, red or black)  
6. \(P\) (black, red)  
7. \(P\) (brown)  
8. \(P\) (all but pink)

For Exercises 9–12, triangle \(ABC\) is inscribed in a rectangle, which is inscribed in a circle, which is inscribed in a square. Express each probability as a decimal to the nearest hundredth.

9. What is the probability that a pebble dropped on the figure will land only in triangle \(ABC\)?

10. What is the probability that the pebble will land in the rectangle, but not in triangle \(ABC\)?

11. What is the probability that the pebble will land in the circle, but not in the rectangle or triangle \(ABC\)?

12. What is the probability that the pebble will land in the square, but not the circle, rectangle or triangle \(ABC\)?

A regular hexagon with a side of 12 inches is randomly thrown onto an isosceles trapezoid whose bases measure 30 inches and 45 inches, and whose height is 24 inches.

13. What is the probability that a fly will land on the regular hexagon?

14. What is the probability that the fly will land on the trapezoid but not the hexagon?

For Exercises 1–4, refer to the isometric drawing at the right. Assume that no cubes are hidden from view.

1. Give the volume in cubic units.

2. Give the surface area in square units.

3. Draw six orthographic views of the solid. Consider the edge with a length of 4 to be the front of the figure.

4. On the isometric dot paper provided, draw the solid from a different view.

5. Each of the four solids at the right has a volume of 8 cubic units. Draw two other solids with a volume of 8 cubic units that are completely different than the solids shown.
**Lesson 6.1**  
**Level A**

1. 15 cubic units  
2. 49 square units  
3. Check student’s drawing.  
4. Check student’s drawing.  
5. Check student’s drawing.

Refer to the isometric drawing at the right. Assume that four cubes are hidden from view.

1. Give the volume in cubic units.

2. Give the surface area in square units.

3. On the isometric dot paper provided, create a solid with a volume of 12 cubic units with at least two stacks of three high and two stacks of two high with no hidden cubes.

4. On the isometric dot paper provided, create a solid with a volume of 15 cubic units that includes as many hidden cubes as possible. Make sure your figure has at least two stacks that are three units high and two stacks that are two units high. State the number of cubes that are hidden.

5. Draw six orthographic views of your solid from Exercise 4. Label the front of the solid in each view.

Practice Masters Level A  
6.2 Spatial Relationships

For Exercises 1–4, refer to the figure at the right.

1. Name three pairs of parallel segments.

2. Name two pairs of line segments that are skew to each other.

3. Name two line segments that are perpendicular to $ADBC$.

4. How many faces are in the polyhedron?

Decide whether each statement below is always true, sometimes true, or never true.

5. If plane $P$ is parallel to plane $Q$, then the lines on $P$ are parallel to the lines on $Q$.

6. If two lines are parallel, then the planes that contain the lines are parallel.

7. If two planes are perpendicular, then the lines on the planes are perpendicular to each other.

Complete the following proof: Given: $\overline{AD} \perp \text{plane } M \newline \overline{AC} \cong \overline{BC}$  Prove: $\triangle ADC \cong \triangle BDC$

Practice Masters Level C

6.4 Coordinates in Three Dimensions

Name the octant, coordinate plane, or axis in which each point is located.

1. \((0, -3, 12)\) ______________________
2. \((17, -11, 31)\) ______________________
3. \((-8, 0, 0)\) ______________________
4. \((-9, 4, 0)\) ______________________
5. \((5, 9, 21)\) ______________________
6. \((0, 0, 43)\) ______________________

For Exercises 7–8, label the coordinate axes and locate each pair of points in a three-dimensional coordinate system. Find the distance between the points and find the midpoint of the segment connecting them.

7. \((12, -15, 21)\) and \((8, 5, 12)\)
8. \((-5, 10, -15)\) and \((6, 6, -9)\)

Given the midpoint, \(M\), and one endpoint \(\overline{AB}\), find the following:

9. \(M(-6, 9, 4)\) and \(A(-2, 6, 7)\)
10. \(M(-3, 6, 0)\) and \(B(0, -7, 4)\)
11. \(M(22, 12, -8)\) and \(A(\frac{3}{2}, -6, -12)\)

For Exercises 12–17, refer to the diagram of the right rectangular prism. Determine the following:

12. point \(B\) __________
13. point \(F\) __________
14. point \(H\) __________
15. \(GH\) __________
16. \(AG\) __________
17. \(CF\) __________
12. \(9.6; \left( -5, -\frac{1}{2}, -5 \right)\)

10. \(13.9 \left( \frac{1}{2}, -2, \frac{1}{2} \right)\)

Lesson 6.4
Level B

17. \(4\sqrt{5}\)

**Lesson 6.5**

**Level A**

1. \(\frac{9}{5}, \frac{9}{7}, -3\)
2. \(-6, -\frac{12}{5}, 12\)
3. \(\frac{8}{3}, -4, 8\)
4. \(-12, 3, -3\)
5. The graph of the equation \(3x + 5y = 9\) lies on a two-dimensional coordinate system and the graph of the equation \(3x + 5y + z = 9\) lies on a three-dimensional coordinate system.
Find the x-, y-, and z-intercepts for each equation.

1. \(5x + 2y - 3z = 9\)

2. \(-2x - 5y + z = 12\)

3. \(6x - 4y + 2z = 16\)

4. \(-x + 4y - 4z = 12\)

5. What is the difference in the graphs of the equations \(3x + 5y = 9\) and \(3x + 5y + z = 9\)?

In the coordinate plane provided, label your axes and plot the line defined by the parametric equations.

6. \(x = t - 1\)
   \(y = 3 - t\)

7. \(x = 4t\)
   \(y = t - 2\)

8. \(x = 3\)
   \(y = 2t - 5\)
   \(z = t + 1\)

9. \(x = -t + 2\)
   \(y = t - 2\)
   \(z = 3t\)
7. 22.3, \(10, -5, 16\frac{1}{2}\)

8. 13.2, \(\frac{1}{2}, 9, -12\)

9. \((-10, 12, 1); 11.7\)

10. \((-6, 19, -4); 27.9\)

2. \(-6, -\frac{12}{5}, 12\)

3. \(\frac{8}{3}, -4, 8\)

4. \(-12, 3, -3\)

5. The graph of the equation \(3x + 5y = 9\) lies on a two-dimensional coordinate system and the graph of the equation \(3x + 5y + z = 9\) lies on a three-dimensional coordinate system.
Lesson 6.5
Level B

1.

2.

3.

4.

5.

6.
Use the intercepts to sketch the plane defined by each equation below.

1. \(2x + 3y - z = 12\)
2. \(-3x + y - 3z = 9\)

In the coordinate plane provided, label your axes and plot the line defined by the parametric equations.

3. \(x = 4t - 2\)
   \(y = 3 - t\)

4. \(x = \frac{1}{2}t - 4\)
   \(y = 2t + 6\)

5. \(x = -t\)
   \(y = 2t + 1\)
   \(z = t - 2\)

6. \(x = t - 4\)
   \(y = 3 - t\)
   \(z = \frac{1}{2}t + 3\)
Lesson 6.5
Level B

1.

2.
Practice Masters Level C
6.5 Lines and Planes in Space

Use the intercepts to sketch the plane defined by each equation below.

1. $6x - 4y + 3z = 12$
2. $-3x - 2y + z = 6$

In the coordinate plane provided, label your axes and plot the line defined by the parametric equations.

3. $x = -4t - 3$
   $y = 2 - t$
4. $x = 2t + 3$
   $y = 3t$
   $z = 4 - t$

Write each set of symmetric equations in parametric form.

5. \[
\begin{align*}
\frac{x + 6}{-4} &= \frac{y - 4}{3} = \frac{z + 2}{2}
\end{align*}
\]
6. \[
\begin{align*}
\frac{1}{2x + 3} &= \frac{y - 1}{6} = \frac{z - 5}{-5}
\end{align*}
\]

Write each set of parametric equations in symmetric form.

7. $x = 4t + 3$
   $y = 3 - t$
   $z = 3t + 1$
8. $x = -t - 4$
   $y = 2t$
   $z = 3 - t$
Lesson 6.5
Level C

1. \[\begin{align*}
    x &= -4t - 6 \\
    y &= -3t + 4 \\
    z &= 2t - 2
\end{align*}\]

2. \[\begin{align*}
    x &= 12t - 6 \\
    y &= 3t + 1 \\
    z &= -5t + 5
\end{align*}\]

3. \[\begin{align*}
    \frac{x - 3}{4} &= \frac{y - 3}{-1} = \frac{z - 1}{3}
\end{align*}\]

4. \[\begin{align*}
    \frac{x + 4}{-1} &= \frac{y}{2} = \frac{z - 3}{-1}
\end{align*}\]

Lesson 6.6
Level A

Lesson 6.6
Level B

For all exercises, see student’s work.

Lesson 6.6
Level C

For all exercises, see student’s work.
In Exercises 1–4, locate the vanishing point for the figure and draw the horizon line.

1.

2.

3.

4.

5. In the space provided, make a one-point perspective drawing of a rectangular solid. Place the vanishing point above the solid.

6. In the space below, make a two-point perspective drawing of a rectangular solid. Place the vanishing points above the solid.
Lesson 6.5
Level C

1.

2.

3.

4.

5. \( x = -4t - 6 \)
   \( y = -3t + 4 \)
   \( z = 2t - 2 \)

6. \( x = 12t - 6 \)
   \( y = 3t + 1 \)
   \( z = -5t + 5 \)

7. \( \frac{x - 3}{4} = \frac{y - 3}{-1} = \frac{z - 1}{3} \)

8. \( \frac{x + 4}{-1} = \frac{y}{2} = \frac{z - 3}{-1} \)

Lesson 6.6
Level A

For all exercises, see student’s work.

Lesson 6.6
Level B

For all exercises, see student’s work.

Lesson 6.6
Level C

For all exercises, see student’s work.
In Exercises 1–4, locate the vanishing point for the figure and draw the horizon line.

1. 

2. 

3. 

4. 

5. In the space provided, make a two-point perspective drawing of a rectangular solid. Place the vanishing points to the right of the solid.

6. Create a perspective drawing of the word MATH.
Lesson 6.5
Level C

1. 

2. 

3. 

4. 

5. \(x = -4t - 6\)
   \(y = -3t + 4\)
   \(z = 2t - 2\)

6. \(x = 12t - 6\)
   \(y = 3t + 1\)
   \(z = -5t + 5\)

7. \(\frac{x - 3}{4} = \frac{y - 3}{-1} = \frac{z - 1}{3}\)

8. \(\frac{x + 4}{-1} = \frac{y}{2} = \frac{z - 3}{-1}\)

Lesson 6.6
Level A

For all exercises, see student’s work.

Lesson 6.6
Level B

For all exercises, see student’s work.

Lesson 6.6
Level C

For all exercises, see student’s work.
In Exercises 1–4, locate the vanishing point for the figure and draw the horizon line.

1. 2.

3. 4.

5. Make a two-point perspective drawing of a rectangular solid. Place the vanishing points to the left of the solid.

6. Use one-point or two-point perspective to draw a perspective view of the following:

5. \( x = -4t - 6 \)
   \( y = -3t + 4 \)
   \( z = 2t - 2 \)

6. \( x = 12t - 6 \)
   \( y = 3t + 1 \)
   \( z = -5t + 5 \)

7. \( \frac{x - 3}{4} = \frac{y - 3}{-1} = \frac{z - 1}{3} \)

8. \( \frac{x + 4}{-1} = \frac{y}{2} = \frac{z - 3}{-1} \)
Find the surface area and volume for each rectangular prism having the given dimensions.

1. $1 \times 1 \times 1$  
2. $1 \times 4 \times 5$  
3. $1 \times 2 \times 7$  
4. $3 \times 4 \times 5$  
5. $2 \times 2 \times 2$  
6. $2 \times 2 \times 5$  
7. $2 \times 5 \times 5$  
8. $5 \times 5 \times 5$  
9. $3 \times 3 \times 3$  
10. $3 \times 3 \times 4$  
11. $3 \times 4 \times 3$  
12. $4 \times 3 \times 4$  
13. $3 \times 4 \times 4$  
14. $4 \times 4 \times 4$

Determine the surface-area-to-volume ratio for a rectangular prism with the given dimensions. Show all of your steps.

15. $1 \times 1 \times 1$  
16. $2 \times 2 \times 2$  
17. $3 \times 3 \times 3$  
18. $4 \times 4 \times 4$  
19. $5 \times 5 \times 5$  
20. $6 \times 6 \times 6$  
21. The side of a cube is 3 inches. Find the surface-area-to-volume ratio.

22. The side of a cube is 12 centimeters. Find the surface-area-to-volume ratio.

23. To make an open box, a square is cut from each corner of a 10-inch-by-10-inch cardboard. What is the whole-number length for the side of the square that will create a box having the greatest volume?

24. The dimensions of Box A are 3 inches by 9 inches by 8 inches. The dimensions of Box B are 2 inches by 12 inches by 9 inches. The volumes are the same. Which has the smaller surface area?
Lesson 7.1
Level A

1. \( S = 6 \text{ units}^2; V = 1 \text{ unit}^3 \)
2. \( S = 58 \text{ units}^2; V = 20 \text{ units}^3 \)
3. \( S = 46 \text{ units}^2; V = 14 \text{ units}^3 \)
4. \( S = 94 \text{ units}^2; V = 60 \text{ units}^3 \)
5. \( S = 24 \text{ units}^2; V = 8 \text{ units}^3 \)
6. \( S = 48 \text{ units}^2; V = 20 \text{ units}^3 \)
7. \( S = 90 \text{ units}^2; V = 50 \text{ units}^3 \)
8. \( S = 150 \text{ units}^2; V = 125 \text{ units}^3 \)
9. \( S = 54 \text{ units}^2; V = 27 \text{ units}^3 \)

23. 2 inches
24. box A

Lesson 7.1
Level B

1. 11 to 15 = 0.733
2. 5 to 4 = 1.25
3. 53 to 110 = 0.4818
4. 13 to 6 = 2.166
5. 3721 to 2856 = 1.303
6. 7 to 10 0.7
7. Sample answer: minimize the surface area since the volume is constant
8. Sample answer: maximize the volume since the surface area is fixed and you want to create the maximum amount of space
9. Sample answer: maximize the volume since you want the most storage capacity
10. Sample answer: minimize the surface area since you may need to save on construction materials
11. 1 to 3
12. 25 centimeters
13. 3
14. 0
15. 26 square inches
16. 184 to 158 = 1.16

Lesson 7.1
Level C

1. Sample answer: minimize the surface area since the volume is limited and since children's hands are small
Determine the surface-area-to-volume ratio for a rectangular prism with the given dimensions.

1. $6 \times 10 \times 10$  
2. $4 \times 4 \times 8$
3. $10 \times 11 \times 20$  
4. $2 \times 3 \times 4$
5. $3.2 \times 5.1 \times 7$  
6. $5 \times 12 \times 15$

For Exercises 7–10, determine whether you should maximize the volume or minimize the surface area. Explain your reasoning.

7. designing baby food jars that will hold 4 ounces of fruit
8. building a rabbit pen with a limited amount of fencing
9. building a silo that cannot be taller than 20 feet high
10. designing a box whose length is two times smaller than the width

Solve.

11. The side of a cube is 18 inches. Find the surface-area-to-volume ratio.

12. The volume of a rectangular prism is 2000 cubic centimeters. Two of the sides are 8 centimeters and 10 centimeters. Find the length of the missing side.

13. The surface-area-to-volume ratio of a cube is 1 to 2. Find the smallest possible length of its side.

The dimensions of Box A are 2 inches by 6 inches by 10 inches. The dimensions of Box B are 3 inches by 5 inches by 8 inches. Use this information for Exercises 14–16.

14. Find the difference in volumes.

15. Find the difference in surface areas.

16. Find the ratio of surface area of Box A to that of Box B.
Lesson 7.1
Level A

1. \( S = 6 \text{ units}^2; V = 1 \text{ unit}^3 \)
2. \( S = 58 \text{ units}^2; V = 20 \text{ units}^3 \)

Practice Masters Level C

7.1 Surface Area and Volume

For Exercises 1 and 2, determine whether you should maximize the volume or minimize the surface area. Explain your reasoning.

1. designing a child’s cup that will hold no more than 6 ounces of juice

2. constructing a sand box with a limited amount of lumber

3. Compare the surface-area-to-volume ratio of a $s \times s \times 2$ rectangular prism with that of a $s \times s \times s$ rectangular prism as $s$ decreases.

4. The volume of a rectangular prism is 135 cubic inches. Two of its sides are 3 inches and 9 inches. Find the surface area.

5. The surface area of a rectangular prism is 504 cubic inches. Two of its sides are 6 inches and 12 inches. Find the volume.

6. The volume of a rectangular prism is 500 cubic centimeters. Two of its sides are 5 centimeters and 10 centimeters. Find the surface-area-to-volume ratio.

7. The volume of a rectangular prism is 216 cubic inches. Two of its sides are 6 inches and 12 inches. Find the surface-area-to-volume ratio.

8. The surface-area-to-volume ratio of a rectangular prism is 4 to 5. Two of the sides are 10 centimeters and 20 centimeters. Find the length of the missing side.

9. The surface-area-to-volume ratio of a rectangular prism is 13 to 18. Two of the sides are 9 centimeters and 12 centimeters. Find the length of the missing side.

10. The surface-area-to-volume ratio of a cube is 2 to 5. Find the length of the side.

11. The surface-area-to-volume ratio of a cube is 10 to 3. Find the length of the side.

12. The surface-area-to-volume ratio of a cube is 3 to 2. Find the surface area.

13. The surface-area-to-volume ratio of a cube is 3 to 4. Find the volume.
Lesson 7.1
Level A

1. \( S = 6 \text{ units}^2; V = 1 \text{ units}^3 \)

8. 33 centimeters$^3$

9. 70 centimeters$^3$

10. 144 units$^3$

11. 12 units$^3$

#### Level B

1. Divide the volume by the base area.

2. Find the area of each part of the net. Find the sum of the areas.

3. $S = 186$ meters$^2$; $V = 126$ meters$^3$

4. $S = 175.2$ inches$^2$; $V = 124.7$ inches$^3$

5. $S = 179.1$ centimeters$^2$;
   $V = 166.3$ centimeters$^3$

6. $S = 558.1$ meters$^2$; $V = 580.6$ meters$^3$

7. $S = 100$ centimeters$^2$; $V = 50$ centimeters$^3$

8. $S = 41.1$ units$^2$; $V = 15.8$ units$^3$
Practice Masters Level A
7.2 Surface Area and Volume of Prisms

Find the volume of a prism with the given dimensions.

1. \(B = 20 \text{ in.}^2, h = 5 \text{ in.}\) 
2. \(B = 8 \text{ cm}^2, h = 9 \text{ cm}\)
3. \(B = 12 \text{ cm}^2, h = 4 \text{ cm}\)
4. \(B = 15 \text{ in.}^2, h = 15 \text{ in.}\)
5. \(B = 20 \text{ in.}^2, h = 6 \text{ in.}\)
6. \(B = 6 \text{ in.}^2, h = 20 \text{ in.}\)
7. \(B = 11 \text{ cm}^2, h = 3 \text{ cm}\)
8. \(B = 3 \text{ cm}^2, h = 11 \text{ cm}\)

9. The bases of a right rectangular prism are two congruent triangles, each with a height of 7 centimeters and a base of 2 centimeters. The height of the prism is 10 centimeters. What is the volume?

Use the given dimensions to find the volume of each prism with rectangular bases.

10. \(l = 4, w = 4, h = 9\)
11. \(l = 2, w = 1, h = 6\)
12. \(l = 3, w = 2, h = 1\)
13. \(l = 9, w = 5, h = 1\)
14. \(l = 4, w = 3, h = 3\)
15. \(l = 16, w = 10, h = 5\)
16. \(l = 12, w = 10, h = 2\)
17. \(l = 15, w = 6, h = 7\)

Find the surface area of a right rectangular prism with the given dimensions.

18. \(l = 7, w = 8, h = 12\)
19. \(l = 11, w = 10, h = 3\)
20. \(l = 6, w = 5, h = 2\)
21. \(l = 4, w = 10, h = 3\)
22. \(l = 3, w = 4, h = 5\)
23. \(l = 5, w = 3, h = 4\)
24. \(l = 20, w = 15, h = 6\)
25. \(l = 15, w = 6, h = 20\)

26. A right prism has two congruent squares for its bases. The sides of the squares measure 5 inches. The height of the prism is 10 inches. Find the surface area of the prism.

27. The following statement is an example of what principle?
   If two solids have equal heights and the cross sections formed by every plane parallel to the bases of both solids have equal areas, then the two solids have equal volumes.
2. Sample answer: maximize the volume since the surface area is fixed and you want to create the maximum amount of space.

3. \(1 + \frac{4}{s} \cdot \frac{6}{s}\)

4. 174 inches\(^2\)

5. 720 inches\(^3\)

6. 4 to 5 or 0.8

27. Cavalieri’s Principle

Lesson 7.2
Level B

1. Divide the volume by the base area.

2. Find the area of each part of the net. Find the sum of the areas.

3. \(S = 186 \text{ meters}^2; V = 126 \text{ meters}^3\)

4. \(S = 175.2 \text{ inches}^2; V = 124.7 \text{ inches}^3\)

5. \(S = 179.1 \text{ centimeters}^2; V = 166.3 \text{ centimeters}^3\)

6. \(S = 558.1 \text{ meters}^2; V = 580.6 \text{ meters}^3\)

7. \(S = 100 \text{ centimeters}^2; V = 50 \text{ centimeters}^3\)

8. \(S = 41.1 \text{ units}^2; V = 15.8 \text{ units}^3\)
1. If you know the base area and the volume of a right prism, explain how you can find the height.

2. Explain how to determine the surface area of a right prism if you are given a net of the prism.

Find the surface area and volume of a right prism with the given base shape, base dimensions, and prism height, \( h \). Round to the nearest tenth, if necessary.

3. square base whose sides measure 3 meters; \( h = 14 \) meters

4. equilateral triangle base whose sides measure 6 inches; \( h = 8 \) inches

5. regular hexagon base whose sides measure 10 centimeters; \( h = 4 \) centimeters

6. regular octagon base whose apothem is 2.8 meters and perimeter is 51.2 meters; \( h = 8.1 \) meters

7. regular pentagon base whose apothem is 2 centimeters and perimeter is 25 centimeters; \( h = 2 \) centimeters

8. rectangular base whose length is 4.2 units and width is 2.5 units; \( h = 1.5 \) units

9. a right triangle base whose hypotenuse is 17 inches and one leg is 15 inches; \( h = 5 \) inches

10. a regular hexagon whose apothem is 3 feet; \( h = 9 \) feet

11. A container shaped like an oblique prism can hold 22 ounces of mustard. Another container, in the shape of a right prism, has the same height as the oblique prism. The areas of the bases of each prism are equal. How much mustard can the right prism hold? Explain.

12. The volume of a right prism is 1297 square centimeters. The base is an equilateral triangle whose sides are each 24 centimeters. Find the height of the prism.
2. Sample answer: maximize the volume since the surface area is fixed and you want to create the maximum amount of space

Use the figure below for Exercises 1–5. The hole in the center of the figure is in the shape of a triangular prism and goes all the way through the cube.

1. Find the surface area of the hole to the nearest tenth.

2. Explain how you would find the surface area of the entire figure.

3. Find the surface area of the figure, including that of the hole. Round to the nearest tenth.

4. Find the volume of the hole.

5. Find the volume of the figure with the hole.

6. The surface area of a right rectangular prism is 112 square units. The height is twice the width. The length is 4 units more than the height. Find the volume.

7. The surface area of a right rectangular prism is 486.08 square meters. The length is 2.5 times the width. The height is 1.5 times the length. Find the volume.

8. The ratio of the area of the base of a right prism to the area of its lateral sides, is 2 to 3. The total surface area is 35 square meters. The height of the prism is 3 meters. Find the volume.

9. A right triangular prism has an isosceles right triangle for a base. The height of the prism is 10 meters. The surface area is 441.42 square meters. Find the volume.

10. If two prisms have equal volumes and the cross sections formed by every plane are parallel to the bases of both solids, what must be true about the heights of each prism?
Answers

Use the pyramid at the right for Exercises 1–7.

1. Find the area of $\triangle VAB$.  
2. Find the area of $\triangle VBC$.  
3. Find the area of $\triangle VCD$.  
4. Find the area of $\triangle VDA$.  
5. Find the area of $ABCD$.  
6. Find the surface area of the pyramid.  
7. Find the volume of the pyramid.  

Use the pyramid with an equilateral triangular base for Exercises 8–11.

8. Find the area of each lateral face.  
9. The height of $\triangle PQR$ is 7.5. Find the area of $\triangle PQR$.  
10. Find the surface area of the pyramid.  
11. Find the volume of the pyramid.  
12. The area of the base of a pyramid is 24 square units. The height of the pyramid is 8 units. Find the volume.  
13. The perimeter of the square base of a pyramid is 24 units. The slant height is 10 units. Find the surface area of the pyramid.  
14. If the height of the pyramid in Exercise 13 is 8 units, what is the volume?  

Find the surface area of each regular pyramid with the given side length, $s$, and slant height $l$. The number of sides of the base is given by $n$.

15. $s = 3, l = 4, n = 4$  
16. $s = 12, l = 14, n = 4$  
17. $s = 15, l = 17, n = 3$

Use the pyramid at the right for Exercises 1–6. The base of the pyramid is an equilateral triangle whose perimeter measures 120 inches. The volume of the pyramid is 3464.1 cubic inches.

1. Find the length of a side of the base. 
2. Find the area of the base of the pyramid to the nearest hundredth. 
3. Find the height of the pyramid. 
4. The apothem of the triangular base is 11.547 inches. Find the slant height of the pyramid to the nearest hundredth. 
5. Find the lateral area of the pyramid. 
6. Find the total surface area of the pyramid. 

Use the pyramid with a square base for Exercises 7–13. The area of the base is 81 square meters and its volume is 108 cubic meters. 

7. Find the height of the pyramid. 
8. Find the length of a side of the base. 
9. Find the length of the apothem in the base. 
10. Find the slant height of a lateral face. 
11. Find the perimeter of the base. 
12. Find the lateral area of the pyramid. 
13. Find the total surface area of the pyramid. 
14. The area of the square base of a regular pyramid is 12.96 square meters. The volume is 129.6 cubic meters. Find the surface area of the pyramid to the nearest tenth. 
15. The base of a regular pyramid is a hexagon whose perimeter is 42 feet. The volume of the pyramid is 1082.1 cubic feet. Find the height. 

Find the volume of each rectangular pyramid with the given height, \( h \), and base dimensions \( l \times w \). Round your answers to the nearest tenth. 

16. \( h = 6, l = 10, w = 12 \)  
17. \( h = 20, l = 8, w = 2 \)  
18. \( h = 5, l = 7, w = 3 \)

7.3 Surface Area and Volume of Pyramids

A tent consists of a pyramid atop a rectangular prism as shown in the figure at the right. The total height of the tent is 12 feet. Use this information for Exercises 1–4.

1. Find the lateral area of the pyramid portion of the tent to the nearest square foot.

2. Find the lateral area of the prism portion of the tent to the nearest square foot.

3. Find the total surface area of the tent to the nearest square foot.

4. Find the volume of the tent to the nearest cubic foot.

5. A tent has a square base and a total height of 12 feet. The height of the pyramid top is 4 feet. The volume of the tent is the same as the volume of the tent above. How wide is it to the nearest inch?

6. A tent has a square base and a total height of 6 feet. The height of the pyramid top is 2 feet. The prism base is a cube. The entire tent including the floor, is made of canvas. To the nearest tenth of a square yard, how much canvas is used to make the tent?

A decorative ornament is made of solid wood. It is comprised of two congruent regular hexagonal pyramids that share the same base. The perimeter of the hexagon is 72 centimeters. The slant height of each of the faces is 16 centimeters. Use this information for Exercises 7 and 8.

7. Find the volume of the ornament to the nearest tenth.

8. Find the surface area of the ornament.

9. The base of a pyramid is a regular hexagon whose area is 50.3 square inches. The height is 6.2 inches. The lateral faces are all congruent. Find the slant height of each lateral face to the nearest hundredth.

10. The surface area of a regular square pyramid is 864 square meters. The slant height is 15 meters and the height is 12 meters. Find the length of each side of the base.

1. Gordan plans to fill gasoline into a cylindrical tank that is 10 feet by 5 feet by 12 feet to 85% of its capacity. What measurement should Gordan calculate to determine this amount? 

2. Sjorn needs to shrink-wrap a cylindrical tube. What measurement should Sjorn calculate to determine the exact amount of shrink-wrap needed?

Find the unknown measure for a right cylinder with radius \( r \), height \( h \), and surface area \( S \). Round your answers to the nearest tenth.

3. \( r = 4, h = 3, S = \) ________
4. \( r = 2, h = 10, S = \) ________
5. \( r = 1, h = 1, S = \) ________
6. \( r = 2, h = 2, S = \) ________
7. \( r = 3, h = 3, S = \) ________
8. \( r = 4, h = 4, S = \) ________
9. \( r = 1, h = 3, S = \) ________
10. \( r = 3, h = 1, S = \) ________
11. \( r = 5, h = \) ________, \( S = 80\pi \)
12. \( r = 2, h = \) ________, \( S = 12\pi \)
13. \( r = 3, h = \) ________, \( S = 60\pi \)
14. \( r = 4, h = \) ________, \( S = 112\pi \)
15. \( r = \) ________, \( h = 8, S = 96\pi \)
16. \( r = \) ________, \( h = 3, S = 20\pi \)
17. \( r = \) ________, \( h = 1, S = 84\pi \)
18. \( r = \) ________, \( h = 10, S = 150\pi \)

Find the unknown measure for a right cylinder with radius \( r \), height \( h \), and volume \( V \). Give exact answers.

19. \( r = 1, h = 1, V = \) ________
20. \( r = 2, h = 2, V = \) ________
21. \( r = 3, h = 3, V = \) ________
22. \( r = 4, h = 4, V = \) ________
23. \( r = 3, h = 4, V = \) ________
24. \( r = 4, h = 3, V = \) ________
25. \( r = 5, h = \) ________, \( V = 125\pi \)
26. \( r = 3, h = \) ________, \( V = 90\pi \)
27. \( r = 7, h = \) ________, \( V = 49\pi \)
28. \( r = 1, h = \) ________, \( V = 8\pi \)
29. \( r = 2, h = \) ________, \( V = 24\pi \)
30. \( r = 9, h = \) ________, \( V = 162\pi \)
31. \( r = \) ________, \( h = 2, V = 72\pi \)
32. \( r = \) ________, \( h = 8, V = 72\pi \)
33. \( r = \) ________, \( h = 3, V = 3\pi \)
34. \( r = \) ________, \( h = 11, V = 1,100\pi \)

13. Sample answer: The surface area of a right cone is the sum of the lateral area and the sum of the base area. The volume of a right cone is one-third of the base area times the height of the cone.
1. The top of the hollow wooden coffee table is a triangular prism. The sides of the triangle measure 36 inches, 48 inches, and 60 inches. The height of the prism is 1.5 inch. Each of the three legs is a cylinder 2 inches wide and 15 inches high. Find the volume to the nearest tenth.

2. The nut is 7 centimeters across its widest width. The circular hole is 2 centimeters across. The nut is 0.25 centimeters deep. Find the volume to the nearest tenth.

3. The pipe shown is 6 feet across and 22 feet long. The circular hole is 4 feet across. Find the volume to the nearest hundredth.

4. The tower consists of 3 stacked right cylinders. The radius of the bottom cylinder is 4 times that of the top cylinder. The radius of the middle cylinder is twice that of the top cylinder. The height of the top cylinder is 4 times that of the bottom cylinder. The height of the middle cylinder is twice that of the bottom cylinder. The radius of the top cylinder is 1 foot. The height of the top cylinder is 8 feet. If the tower is located in a park, what is the surface area of the portion that requires paint?
Lesson 7.4

12. $81\pi$ feet^3

13. Sample answer: The surface area of a right cone is the sum of the lateral area and the sum of the base area. The volume of a right cone is one-third of the base area times the height of the cone.
Find the surface area of each right cone.

1. \( \text{Surface Area} = \pi r (r + s) \)
   - \( r = 3 \text{ m}, \ s = 5 \text{ m} \)

2. \( \text{Surface Area} = \pi r (r + s) \)
   - \( r = 7 \text{ cm}, \ s = 14 \text{ cm} \)

3. \( \text{Surface Area} = \pi r (r + s) \)
   - \( r = 4 \text{ ft}, \ s = 11 \text{ ft} \)

4. \( \text{Surface Area} = \pi r (r + s) \)
   - \( r = 20 \text{ in.}, \ s = 30 \text{ in} \)

5. \( \text{Surface Area} = \pi r (r + s) \)
   - \( r = 7 \text{ m}, \ s = 25 \text{ m} \)

6. \( \text{Surface Area} = \pi r (r + s) \)
   - \( r = 12 \text{ cm}, \ s = 3 \text{ cm} \)

Find the volume of each cone. Show exact answers.

7. \( \text{Volume} = \frac{1}{3} \pi r^2 h \)
   - \( r = 3 \text{ ft}, \ h = 2 \text{ ft} \)

8. \( \text{Volume} = \frac{1}{3} \pi r^2 h \)
   - \( r = 8 \text{ m}, \ h = 9 \text{ m} \)

9. \( \text{Volume} = \frac{1}{3} \pi r^2 h \)
   - \( r = 4 \text{ in.}, \ h = 12 \text{ in.} \)

10. \( \text{Volume} = \frac{1}{3} \pi r^2 h \)
    - \( r = 9 \text{ ft}, \ h = 3 \text{ ft} \)

11. \( \text{Volume} = \frac{1}{3} \pi r^2 h \)
    - \( r = 3 \text{ ft}, \ h = 9 \text{ ft} \)

12. \( \text{Volume} = \frac{1}{3} \pi r^2 h \)
    - \( r = 27 \text{ ft}, \ h = 3 \text{ ft} \)

13. Write in words the formula for the surface area and the volume of a cone.
    - Surface Area: \( \text{Surface Area} = \pi r (r + s) \)
    - Volume: \( \text{Volume} = \frac{1}{3} \pi r^2 h \)

13. Sample answer: The surface area of a right cone is the sum of the lateral area and the sum of the base area. The volume of a right cone is one-third of the base area times the height of the cone.
Find the surface area of each right cone to the nearest tenth.

1. A right cone has a surface area of square meters. The radius is 8 meters. Write and solve the formula to find the slant height.

2. A right cone has a surface area of 108π square feet. The slant height is twice the radius. Find the radius of the cone.

3. A right cone has a surface area of 525π square meters. The slant height is 5 meters more than the radius. Find the height of the cone to the nearest tenth.

Find the volume of each cone. Show answers to the nearest whole number.

4. The volume of a right cone is 27π cubic inches. The height is the same as the radius. Find the surface area of the cone to the nearest hundredth.

5. The heights of a cone and cylinder are equal. They also have the same volume. Find the ratio of the radius of the cylinder to the radius of the cone.

6. The volumes of a cone and cylinder are the same. Their radii are also the same. Find the ratio of the height of the cylinder to the height of the cone.

The figure to the right was created by removing the top portion of a cone. Use the figure for Exercises 1–3. Express answers to the nearest whole number.

1. Find the volume of the entire cone before the top portion was removed. 

2. Find the volume of the missing top portion of the cone. 

3. Find the volume of the figure. 

4. The surface area and volume of a cone are numerically the same. The radius is 6 centimeters. Find the height. 

5. A cone and cylinder have congruent heights and radii. Find the ratio of the volume of the cylinder to the volume of the cone. 

6. A cone has a volume of $36\pi$ cubic meters. Its height is four times its radius. Find the surface area to the nearest tenth. 

The figure to the right was created with two cones that share the same base. Use it for Exercises 7–11. Express answers to the nearest hundredth, if necessary.

7. The heights of the two cones that comprise this figure are the same. Find the volume of the figure. 

8. The heights of the two cones that comprise this figure are the same. Find the surface area of the figure. 

9. If the height of one of the cones is twice that of the height of the other cone, find the volume of the figure. 

10. The height of one of the cones is twice that of the height of the other cone. Find the surface area of the figure. 

11. What conclusion can you draw from Exercises 7–10?

Fill in the blank.

1. The set of all points in space that are the same distance, \( r \), for a given center point is known as a ____________.

2. The volume of a cylinder minus the volume of a cone equals the volume of a ____________.

3. The formula \( 4\pi r^2 \) can be used to calculate the ____________ of a sphere.

Find the surface area of each sphere, with radius \( r \) or diameter \( d \). Round your answer to the nearest tenth.

4. \( d = 6 \) ______________
5. \( d = 4 \) ______________
6. \( d = 10 \) ______________

7. \( r = 7 \) ______________
8. \( r = 2 \) ______________
9. \( r = 5 \) ______________

10. \( d = 9 \) ______________
11. \( r = 9 \) ______________
12. \( r = 12 \) ______________

Find the surface area of the sphere based on the area, \( A \), of a cross section through its center. Express your answer as an exact answer.

13. \( A = 19 \) ______________

14. \( A = 44\pi \) ______________

15. \( A = 240 \) ______________

16. \( A = 50\pi \) ______________

17. \( A = 308\pi \) ______________

Find the volume of each sphere, with radius \( r \) or diameter \( d \). Round your answer to the nearest tenth.

18. \( r = 1 \) ______________
19. \( d = 4 \) ______________

Find the surface area of the sphere with the radius \( r \) or diameter \( d \). Express your answers as exact answers in terms of \( \pi \).

1. \( r = 4 \)  
2. \( d = 4 \)  
3. \( d = 10 \)

4. \( r = 6.4 \)  
5. \( d = 4.2 \)  
6. \( r = 8.7 \)

The surface area of a sphere is given. Find the length of the radius to the nearest tenth.

7. \( 24 \)  
8. \( 10 \)  
9. \( 100 \)

10. \( 36\pi \)  
11. \( 27\pi \)  
12. \( 20\pi \)

Find the volume of the sphere with radius \( r \) or diameter \( d \). Round your answers to the nearest hundredth.

13. \( r = 14 \)  
14. \( d = 6.2 \)  
15. \( r = 2.5 \)

16. \( r = 50 \)  
17. \( d = 12.9 \)  
18. \( d = 0.54 \)

19. \( r = 0.1 \)  
20. \( d = 0.1 \)  
21. \( r = 11.1 \)

The surface area of a sphere is given. Find the volume to the nearest tenth.

22. \( 100 \)  
23. \( 100\pi \)  
24. \( 9\pi \)

9. $54,000\pi$ centimeters$^3$
10. 50 centimeters long

Lesson 7.7
Level A
1. $(1, 2, -3)$
2. $(2, -5, -6)$
1. A right circular cone, sphere, hemisphere, and right cylinder can each fit inside a cube with any flat surface resting completely on the face of the cube. The interior side of the cube measures 30 centimeters. Find the maximum possible volume of each figure. Then determine which figure has the greatest volume.

   cone: ____________
   sphere: ____________
   hemisphere: ____________
   cylinder: ____________
   greatest volume: ____________

2. The volume-to-surface-area ratio of a sphere is 4 to 1. Find the radius of the sphere.
   ____________

3. The volume-to-surface-area ratio of a sphere is 3 to 5. Find the radius of the sphere.
   ____________

4. Find the exact surface area of a hemisphere whose radius is 8 centimeters.
   ____________

5. The surface area of a sphere and cube are the same. Express the radius \( r \) in terms of the side \( s \) of the cube.
   ____________

6. The surface area of a sphere is numerically the same as its volume. Find the length of the diameter.
   ____________

This figure is comprised of a cone, cylinder and hemisphere. The heights of the cone, cylinder, and hemisphere are each 30 centimeters. Use this figure for Exercises 7–10.

7. Compare the radii of the cone, cylinder, and hemisphere.
   ____________

8. Find the total surface area of the figure to the nearest hundredth.
   ____________

9. Find the exact volume of the figure in terms of \( \pi \).
   ____________

10. Suppose you wanted to cut the figure cross-wise to make two new figures equal in volume, the piece with the cone would be how long?

3. \(x\)-axis
4. cylinder
5. 12 units
Use this graph for Exercises 1–15. Write answers in terms of $\pi$, if necessary.

The coordinates below are the image of Point $C$ after a reflection across a plane. Name the plane or line of reflection.

1. $(0, 5, 12)$  
2. $(0, -5, -12)$  
3. $(0, -5, 12)$

Rotate rectangle $ABCD$ about the $y$-axis.

4. Name the resulting spatial figure.  
5. How long is the radius of the figure?  
6. What is the height of the figure?  
7. Find the volume of the figure.  
8. Find the surface area of the figure.

Rotate rectangle $ABCD$ about the $z$-axis.

9. Name the resulting spatial figure.  
10. How long is the radius of the figure?  
11. Find the volume of the figure.  
12. Find the surface area of the figure.

Rotate the diagonal $\overline{AC}$ about the $x$-axis.

13. Name the resulting spatial figure.  
14. How long is the radius of the figure?  
15. Find the area of the figure.
Lesson 7.7

Lesson 8.1
Level B

1. Triangle

2. Triangle

3. Triangle
Draw the dilation of each figure, using the given scale factor, \( n \), and the given point as the center.

1. \( n = -1 \)

2. \( n = 2 \)

In Exercises 3 and 4, the endpoints of a line segment and a scale factor, \( n \), are given. Use the dilation \( D(x, y) = (nx, ny) \) to transform each segment, and plot the preimage and the image on the coordinate plane.

3. \((3, 0)\) and \((-1, 2)\)  
   \( n = -2 \)

4. \((-2, 2)\) and \((8, 6)\)  
   \( n = \frac{1}{2} \)

5. Draw the lines joining each image point to its preimage in Exercises 3 and 4.
   a. What seems to be true about the lines in Exercise 3? ________________________________
   b. What seems to be true about the lines in Exercise 4? ________________________________
   c. Complete this statement:
      The center of a dilation \( D(x, y) = (nx, ny) \) is located: ________________________________.

In Exercises 6 and 7, the dashed figures represent the preimages of dilations and the solid figures represent the images. Find the scale factor of each dilation.

7. \( n = 2 \)

Lesson 8.1
Level C

1.

Lesson 8.2
Level A

1. \( \frac{8}{6} = \frac{8}{6} \neq \frac{6}{4} \) so triangles are not similar.

2. Corresponding angles are not congruent, so triangles are not similar.

3. Corresponding angles are congruent and corresponding sides are equal (proportional). Sample answer: \( \triangle RTC \sim \triangle CER \)

4. Corresponding angles are not congruent, so triangles are not similar.

5. \( x = 7.5 \)

6. \( x = 70^\circ \)

7. \( y = 1.64 \)

8. \( y = 4 \)

Lesson 8.2
Level B

1. Sample answer: \( \frac{9}{12} = \frac{12}{16} = \frac{12}{16} \) and corresponding angles are congruent. So \( \triangle PQR \sim \triangle STU \).

2. \( m\angle X = 90 - 62 = 28 = m\angle B \)
   \( m\angle A = 90 - 28 = 62 = m\angle W \)
   \( m\angle C = m\angle R = 90 \) and
   \( \frac{7.5}{6.0} = \frac{6.5}{5.2} = \frac{3.5}{2.8} = \frac{5}{4} \) so corresponding sides are proportional.
   \( \triangle ABC \sim \triangle WXR \)

3. \( x = \sqrt{2.5} \approx 1.58 \)

4. \( x = \frac{10.4}{2.2} \approx 4.7 \)
In Exercises 1 and 2 the dashed figures represent the preimages of dilations and the solid figures represent the images. Locate the center of each dilation.

1. 
2. 

3. Draw the image of triangle $\triangle ABC$ under the dilation with center at $P$ and scale factor $n = 3$.

4. What is the ratio of the length of a side of the image to the length of the corresponding side of the preimage?

5. Find the area of $\triangle ABC$ and of its image triangle. What is the ratio of the area of the image to the area of $\triangle ABC$?

6. Find the measures of $\angle A$, $\angle B$, and $\angle C$ and the images of those angles. What is the ratio of the measure of each image angle to its preimage?
Answers

Lesson 8.1

3. Corresponding angles are congruent and corresponding sides are equal (proportional). Sample answer: \( \triangle RTC \sim \triangle CER \)
4. Corresponding angles are not congruent, so triangles are not similar.
5. \( x = 7.5 \)
6. \( x = 70^\circ \)
7. \( y = 1.64 \)
8. \( y = 4 \)

Lesson 8.2
Level B

1. Sample answer: \( \frac{9}{12} = \frac{12}{16} = \frac{12}{16} \) and corresponding angles are congruent. So \( \triangle PQR \sim \triangle STU \).
2. \( m\angle X = 90 - 62 = 28 = m\angle B \)
   \( m\angle A = 90 - 28 = 62 = m\angle W \)
   \( m\angle C = m\angle R = 90 \)
   \( \frac{7.5}{6.0} = \frac{6.5}{5.2} = \frac{3.5}{2.8} = \frac{5}{4} \) so corresponding sides are proportional.
   \( \triangle ABC \sim \triangle WXR \)
3. \( x = \sqrt{2.5} \approx 1.58 \)
4. \( x = \frac{10.4}{2.2} \approx 4.7 \)
In Exercises 1–4, determine whether the polygons are similar. Explain your reasoning. If the polygons are similar, write a similarity statement.

1. 

2. 

3. 

4. 

In Exercises 5 and 6, the polygons in each pair are similar. Find x.

5. 

6. 

Solve each proportion for y.

7. \(\frac{3y}{4.1} = \frac{6}{5}\)

8. \(\frac{36}{y + 2} = \frac{24}{y}\)
Answers

4. They meet at the origin.
   b. They meet at the origin.
   c. at the origin
   d. $n = -\frac{2}{3}$
   e. $n = 2$

Lesson 8.1
Level C

1. 

2. 

3. $x = 1.58$
   $y = 4.7$

Lesson 8.2
Level A

1. $\frac{8}{6} = \frac{8}{6} \neq \frac{6}{4}$ so triangles are not similar.
2. Corresponding angles are not congruent, so triangles are not similar.
3. Corresponding angles are congruent and corresponding sides are equal (proportional). Sample answer: $\triangle RTC \sim \triangle CER$
4. Corresponding angles are not congruent, so triangles are not similar.
5. $x = 7.5$
6. $x = 70^\circ$
7. $y = 1.64$
8. $y = 4$

Lesson 8.2
Level B

1. Sample answer: $\frac{9}{12} = \frac{12}{16} = \frac{12}{16}$ and corresponding angles are congruent. So $\triangle PQR \sim \triangle STU$.
2. $m\angle X = 90 - 62 = 28 = m\angle B$
   $m\angle A = 90 - 28 = 62 = m\angle W$
   $m\angle C = m\angle R = 90$ and
   $\frac{7.5}{6.0} = \frac{6.5}{5.2} = \frac{3.5}{2.8} = \frac{5}{4}$ so corresponding sides are proportional.
   $\triangle ABC \sim \triangle WXR$
3. $x = \sqrt{2.5} \approx 1.58$
4. $x = \frac{10.4}{2.2} \approx 4.7$
In Exercises 1 and 2, determine whether the polygons are similar. Explain your reasoning. If the polygons are similar, write a similarity statement.

1. \[ \triangle PQR \sim \triangle STU \]

2. \[ \triangle ABR \sim \triangle XWR \]

In Exercises 3 and 4, the polygons in each pair are similar. Find \( x \).

3. \[ \frac{2.5}{x} = \frac{1}{1} \]

4. \[ \frac{2.2}{1.5} = \frac{x - 2}{4} \]

Solve each proportion for \( y \).

5. \[ \frac{2y + 1}{15} = \frac{3y - 2}{3} \]

6. \[ \frac{5}{2y} = \frac{18y}{5} \]

7. Carlos decides to make a scale drawing to help him plan how to arrange his furniture in his new room. His new room will be 10 feet wide and 14 feet long, and he makes his scale drawing 5 inches wide and 7 inches long. His desktop measures 2 feet by 4.5 feet. What size rectangle should he use to represent his desk?

8. Verify the “Add-One” Property for the proportion \( \frac{2}{5} = \frac{6}{15} \).
Answers

4. a. They meet at the origin.
   b. They meet at the origin.
   c. at the origin

6. \( n = \frac{2}{3} \)

7. \( n = 2 \)

Lesson 8.1
Level C

1.

Lesson 8.2
Level A

1. \( \frac{8}{6} = \frac{8}{6} \neq \frac{6}{4} \) so triangles are not similar.

2. Corresponding angles are not congruent, so triangles are not similar.

3. Corresponding angles are congruent and corresponding sides are equal (proportional). Sample answer: \( \triangle RTC \sim \triangle CER \)

4. Corresponding angles are not congruent, so triangles are not similar.

5. \( x = 7.5 \)

6. \( x = 70^\circ \)

7. \( y = 1.64 \)

8. \( y = 4 \)

Lesson 8.2
Level B

1. Sample answer: \( \frac{9}{12} = \frac{12}{16} = \frac{12}{16} \) and corresponding angles are congruent. So \( \triangle PQR \sim \triangle STU \).

2. \( \frac{7.5}{6.0} = \frac{6.5}{5.2} = \frac{3.5}{2.8} = \frac{5}{4} \) so corresponding sides are proportional. \( \triangle ABC \sim \triangle WXR \)

3. \( x = \sqrt{2.5} \approx 1.58 \)

4. \( x = \frac{10.4}{2.2} \approx 4.7 \)
5. \( y = \frac{11}{13} \)

6. \( y = \pm \frac{5}{6} \)

7. 1 inch by \( \frac{1}{4} \) inch

8. \( \frac{2 + 5}{5} = \frac{7}{5} \) and \( \frac{6 + 15}{15} = \frac{21}{15} = \frac{7}{5} \)

Lesson 8.2
Level C

1. Not enough information; Do not know about angles.

2. \( \frac{6}{12} = \frac{8}{16} = \frac{10}{20} \), so sides are proportional. The right angles are congruent, and the pair of alternate interior angles are congruent. Thus the remaining pair of angles must be congruent. \( \triangle XRP \sim \triangle PAM \)

3. \( x = 4.1, y = 126^\circ \)

4. \( x = \frac{1}{3}, y = \frac{7}{2} \)

5. $9.60

6. a. $329

   b. $38.25

7. Multiplication Property of Equality

8. Multiplicative Inverse Property

Lesson 8.3
Level C

1. Given

2. Reflexive Property of Congruence

3. AA Similarity Postulate

4. \( \triangle CPB \) (in that order only)

5. Yes, because they are both similar to \( \triangle ACB \) so \( \triangle APC \sim \triangle CPB \) by the Transitive Property of Similarity.
8.2 Similar Polygons

In Exercises 1 and 2, determine whether a) the polygons are similar, b) the polygons are not similar, or c) not enough information is given. Explain your reasoning.

1. \[ \begin{array}{c}
9 \\
12 \\
6 \\
8 \\
\end{array} \]

2. \[ \begin{array}{c}
10 \\
M \\
8 \\
A \\
\end{array} \]

In Exercises 3 and 4, the polygons are similar. Find \( x \) and \( y \).

3. \[ \begin{array}{c}
5 \\
34^\circ \\
12 \\
\end{array} \]

4. \[ \begin{array}{c}
x \\
y \\
5 \\
5 \\
8 \\
\end{array} \]

\( x = \quad , \quad y = \quad \)

Use proportions to solve.

5. If a mix of hard candies sells at 2 pounds for $3.84, how much would 5 pounds cost? \( \quad \)

6. Suppose the exchange rate between Canadian and U.S. money is 1.4 Canadian dollars for each U.S. dollar.
   a. How much Canadian money should a tourist receive for $235 in U.S. dollars? \( \quad \)
   b. Find the price in U.S. dollars for an item that cost $53.55 in Canadian dollars. \( \quad \)

Complete this proof of the Cross Multiplication Property for proportions.

\( \frac{a}{b} = \frac{c}{d} \) where \( a, b, c, \) and \( d \) are real numbers, and \( b \) and \( d \neq 0 \).

\[ \frac{a}{b} \cdot bd = \frac{c}{d} \cdot bd \] by 7. \( \quad \). Therefore

\[ a \cdot d = c \cdot b \] by 8. \( \quad \).
5. \( y = \frac{11}{13} \)

6. \( y = \pm \frac{5}{6} \)

7. 1 inch by 2\( \frac{1}{4} \) inch

8. \( \frac{2 + 5}{5} = \frac{7}{5} \) and \( \frac{6 + 15}{15} = \frac{21}{15} = \frac{7}{5} \)

**Lesson 8.2**

**Level C**

1. Not enough information; Do not know about angles.

2. \( \frac{6}{12} = \frac{8}{16} = \frac{10}{20} \), so sides are proportional. The right angles are congruent, and the pair of alternate interior angles are congruent. Thus the remaining pair of angles must be congruent. \( \triangle XRP \sim \triangle PAM \)

3. \( x = 4.1 \), \( y = 126^\circ \)

4. \( x = 3 \), \( y = \frac{7}{2} \)

5. $9.60

6. a. $329

   b. $38.25

7. Multiplication Property of Equality

8. Multiplicative Inverse Property

**Lesson 8.3**

**Level A**

1. Sample answer: \( \triangle ABC \sim \triangle PXR \), by SAS

2. Sample answer: \( \triangle DML \sim \triangle ZMY \), by AA

3. Cannot be proven similar.

4. Sample answer: \( \triangle ABC \sim \triangle ADE \), by SAS

5. Sample answer: \( \triangle PQR \sim \triangle OMN \), by AA

6. Sample answer: \( \triangle ABC \sim \triangle EFD \), by SSS

**Lesson 8.3**

**Level B**

1. Sample answer: \( \triangle PQR \sim \triangle PTS \), by AA

2. \( \frac{10}{12} \neq \frac{15}{17} \); The triangles are not similar.

3. Not enough information.

4. \( AB = 13 \) and \( EF = 24 \), using the Pythagorean Theorem. Sample answer: \( \triangle DEF \sim \triangle BCA \), by SAS or SSS

5. Vertical angles are congruent.

6. \( AB \parallel XC \)

7. If two lines cut by a transversal are parallel, then alternate interior angles are congruent.

8. AA Similarity Postulate

9. a. \( \angle B \cong \angle Y \),

   b. \( \angle C \cong \angle Z \),

   c. \( \frac{BC}{YZ} = \frac{20}{24} = \frac{5}{6} \)

**Lesson 8.3**

**Level C**

1. Given

2. Reflexive Property of Congruence

3. AA Similarity Postulate

4. \( \triangle CPB \) (in that order only)

5. Yes, because they are both similar to \( \triangle ACB \) so \( \triangle APC \sim \triangle CPB \) by the Transitive Property of Similarity.
Each pair of triangles can be proven similar by using AA, SAS, or SSS information. Write a similarity statement for each pair, and identify the postulate or theorem used.

1. \( \triangle ABC \) and \( \triangle DEF \)

2. \( \triangle PQR \) and \( \triangle XYZ \)

Determine whether each pair of triangles can be proven similar by using AA, SSS, or SAS. If so, write a similarity statement, and identify the postulate or theorem used.

3. \( \triangle XYZ \) and \( \triangle RST \)

4. \( \triangle ABC \) and \( \triangle DEF \)

5. \( \triangle QNOP \) and \( \triangle LMZ \)

6. \( \triangle ABC \) and \( \triangle DEF \)
5. \( y = \frac{11}{13} \)

6. \( y = \pm \frac{5}{6} \)

7. 1 inch by \( \frac{1}{4} \) inch

<td>3. (Reason)</td>
</tr>
</tbody>
</table>

4. In a like manner, what other triangle could be proven similar to \( \triangle ACB? \) ________________

5. Must it be true that \( \triangle APC \) is similar to \( \triangle CPB? \) Explain.

6. Write a statement, worded like a theorem, that describes what you have learned from Exercises 1–5.

A triangle \( \triangle PQR \) has vertices at \( P(-3, -1) \), \( Q(5, -1) \), and \( R(0, 3) \).

Use this information for Exercises 7–10.

7. Use the distance formula to find the lengths of the sides of \( \triangle PQR \).

\( PQ = \) __________, \( QR = \) __________, \( RP = \) __________

8. Find the coordinates of the vertices of the image of \( \triangle PQR \) under the dilation \( D(x, y) = (2x, 2y) \).

\( P' \) __________, \( Q' \) __________, \( R' \) __________

9. Use the distance formula to find the lengths of the sides of the image \( \triangle P'Q'R' \).

\( P'Q' = \) __________, \( Q'R' = \) __________, \( R'P' = \) __________

10. Is it true that \( \triangle PQR \sim \triangle P'Q'R' \)? Explain why or why not.
1. Not enough information; Do not know about angles.

2. \( \frac{6}{12} = \frac{8}{16} = \frac{10}{20} \), so sides are proportional. The right angles are congruent, and the pair of alternate interior angles are congruent. Thus the remaining pair of angles must be congruent.

\[ \triangle XRP \sim \triangle PAM \]

3. \( x = 4.1, y = 126^\circ \)

4. \( x = \frac{3}{3}, y = \frac{7}{2} \)

6. a. $329
   
   b. $38.25

7. Multiplication Property of Equality

8. Multiplicative Inverse Property

Lesson 8.3

Level B

1. Sample answer: \( \triangle PQR \sim \triangle PTS \), by AA

2. \( \frac{10}{12} \neq \frac{15}{17} \); The triangles are not similar.

3. Not enough information.

4. \( AB = 13 \) and \( EF = 24 \), using the Pythagorean Theorem. Sample answer: \( \triangle DEF \sim \triangle BCA \), by SAS or SSS

5. Vertical angles are congruent.

6. \( AB \parallel XC \)

7. If two lines cut by a transversal are parallel, then alternate interior angles are congruent.

8. AA Similarity Postulate

9. a. \( \angle B \cong \angle Y \),

   b. \( \angle C \cong \angle Z \),

   c. \( \frac{BC}{YZ} = \frac{20}{24} = \frac{5}{6} \)

Lesson 8.3

Level C

1. Given

2. Reflexive Property of Congruence

3. AA Similarity Postulate

4. \( \triangle CPB \) (in that order only)

5. Yes, because they are both similar to \( \triangle ACB \) so \( \triangle APC \sim \triangle CPB \) by the Transitive Property of Similarity.
6. The altitude to the hypotenuse of a right triangle splits the triangle into two right triangles so that each is similar to the original triangle and to each other.

7. $PQ = 8$, $QR = \sqrt{41}$, $RP = 5$

8. $P'(-6, -2)$, $Q'(10, -2)$, $R'(0, 6)$

9. $P'Q' = 16$, $Q'R' = \sqrt{164} = 2\sqrt{41}$, $R'P' = 10$

10. yes; because of SSS

Lesson 8.4
Level A

1. $x = 6.4$

2. $x = 24$

3. $x = 10.5$

4. $x = 7.5$

5. Sample answer: $\triangle AGB \sim \triangle AFC \sim \triangle AED$ by either AA or SAS

6. Sample answer: $\triangle PQR \sim \triangle TSR$, by AA

7. $x = \frac{27}{8} = 3\frac{3}{8}$

8. $x = \frac{2}{3}$

Lesson 8.4
Level B

1. $x = \frac{50}{11} = \frac{6}{11}$

2. $x = \frac{15}{4} = \frac{3}{4}$

3. $x = 1.5$, $y = 9$

4. $x = 9.6$, $y = 7.5$

5. $x = 18$, $y = 18\frac{1}{3}$

6. $x = 3.2$, $y = 11\frac{2}{3}$

Lesson 8.4
Level C

1. $x = 9$, $y = 7.5$

2. $x = \frac{5}{8}$, $y = \frac{9}{8}$

3. $x = \sqrt{12} = 2\sqrt{3}$, $y = 6.3$

4. $x = 15$, $y = 26$

5. a. $x = \frac{2}{3}$ cm, $y = \frac{1}{3}$ cm, $z = \frac{5}{3}$ cm, $p = 8$ cm

   b. Corresponding sides are not proportional, so the trapezoids are not similar.

Lesson 8.5
Level A

1. $\frac{PQ}{XZ}$ or $\frac{PR}{XY}$ or $\frac{QR}{ZY}$

2. $\frac{AC}{AD}$

3. $x = 2.4$
Use the Side-Splitting Theorem to find $x$.

1. 
   \[
   \frac{x}{5} = \frac{8}{4}
   \]
   \[x = \frac{8 	imes 5}{4} = 10\]

2. 
   \[
   \frac{x}{10} = \frac{9}{6}
   \]
   \[x = \frac{9 	imes 10}{6} = 15\]

3. 
   \[
   \frac{x}{4} = \frac{4.5}{3}
   \]
   \[x = \frac{4.5 	imes 4}{3} = 6\]

4. 
   \[
   \frac{x + 5}{4} = \frac{x}{6}
   \]
   \[6x = 4x + 20\]
   \[2x = 20\]
   \[x = 10\]

Name all the similar triangles in each figure. State the postulate or theorem that justifies each similarity.

5. 
   
   Similar triangles: $\triangle ABE \sim \triangle ACD$, $\triangle BCG \sim \triangle DCG$.
   
   Postulate: AA Similarity Postulate.

6. 
   
   Similar triangles: $\triangle PQR \sim \triangle STU$, $\triangle PSQ \sim \triangle TQU$.
   
   Postulate: AA Similarity Postulate.

Use the Two-Transversal Proportionality Corollary to find $x$.

7. 
   \[
   \frac{x}{9} = \frac{3}{8}
   \]
   \[x = \frac{3 	imes 9}{8} = \frac{27}{8}\]

8. 
   \[
   \frac{x + 2}{1} = \frac{4}{1}
   \]
   \[x + 2 = 4\]
   \[x = 2\]
6. The altitude to the hypotenuse of a right triangle splits the triangle into two right triangles so that each is similar to the original triangle and to each other.

7. $PQ = 8$, $QR = \sqrt{41}$, $RP = 5$

8. $P'(-6, -2)$, $Q'(10, -2)$, $R'(0, 6)$

9. $P'Q' = 16$, $Q'R' = \sqrt{164} = 2\sqrt{41}$, $R'P' = 10$

10. yes; because of SSS

**Lesson 8.4**

**Level A**

1. $x = 6.4$

2. $x = 24$

3. $x = 10.5$

4. $x = 7.5$

5. Sample answer: $\triangle AGB \sim \triangle AFC \sim \triangle AED$ by either AA or SAS

7. $x = \frac{27}{8} = 3\frac{3}{8}$

8. $x = \frac{2}{3}$

**Lesson 8.4**

**Level B**

1. $x = \frac{50}{11} = 4\frac{6}{11}$

2. $x = \frac{15}{4} = 3\frac{3}{4}$

3. $x = 1.5$, $y = 9$

4. $x = 9.6$, $y = 7.5$

5. $x = 18$, $y = 18\frac{1}{3}$

6. $x = 3.2$, $y = 11\frac{2}{3}$

**Lesson 8.5**

**Level A**

1. $\frac{PQ}{XZ}$ or $\frac{PR}{XY}$ or $\frac{QR}{ZY}$

   $\frac{AC}{AD}$

2. $x = 2.4$
Use the Side-Splitting Theorem to find $x$.

1. $x = \underline{\hspace{2cm}}$

2. $x = \underline{\hspace{2cm}}$

In Exercises 3–6, use what is given in each figure to find $x$ and $y$.

3. $x = \underline{\hspace{2cm}}$

   $y = \underline{\hspace{2cm}}$

4. $x = \underline{\hspace{2cm}}$

   $y = \underline{\hspace{2cm}}$

5. $x = \underline{\hspace{2cm}}$

   $y = \underline{\hspace{2cm}}$

6. $x = \underline{\hspace{2cm}}$

   $y = \underline{\hspace{2cm}}$

7. Use a compass and straightedge to construct lines that split $AB$ into three segments whose lengths are in the ratio 1:3:2.
6. The altitude to the hypotenuse of a right triangle splits the triangle into two right triangles so that each is similar to the original triangle and to each other.

7. \( PQ = 8, QR = \sqrt{41}, RP = 5 \)

8. \( P'(-6, -2), Q'(10, -2), R'(0, 6) \)

9. \( P'Q' = 16, Q'R' = \sqrt{164} = 2\sqrt{41}, R'P' = 10 \)

10. yes; because of SSS

**Lesson 8.4**

**Level A**

1. \( x = 6.4 \)

2. \( x = 24 \)

3. \( x = 10.5 \)

4. \( x = 7.5 \)

5. Sample answer: \( \triangle AGB \sim \triangle AFC \sim \triangle AED \) by either AA or SAS

6. Sample answer: \( \triangle PQR \sim \triangle TSR \), by AA

7. \( x = \frac{27}{8} = 3\frac{3}{8} \)

8. \( x = \frac{2}{3} \)

**Lesson 8.4**

**Level B**

1. \( x = \frac{50}{11} = 4\frac{6}{11} \)

2. \( x = \frac{15}{4} = 3\frac{3}{4} \)

3. \( x = 1.5, y = 9 \)

4. \( x = 9.6, y = 7.5 \)

5. \( x = 18, y = 18\frac{1}{3} \)

6. \( x = 3.2, y = 11\frac{2}{3} \)

**Lesson 8.4**

**Level C**

1. \( x = 9, y = 7.5 \)

2. \( x = \frac{5}{8}, y = \frac{9}{8} \)

3. \( x = \sqrt{12} = 2\sqrt{3}, y = 6.3 \)

4. \( x = 15, y = 26 \)

5. a. \( x = \frac{2}{3} \text{ cm}, y = \frac{1}{3} \text{ cm}, z = \frac{5}{3} \text{ cm}, p = 8 \text{ cm} \)

b. Corresponding sides are not proportional, so the trapezoids are not similar.

**Lesson 8.5**

**Level A**

1. \( \frac{PQ}{XZ} \) or \( \frac{PR}{XY} \) or \( \frac{QR}{ZY} \)

2. \( \frac{AC}{AD} \)

3. \( x = 2.4 \)
In Exercises 1–4, find \(x\) and \(y\) for each figure.

1. \[\begin{array}{c}
\triangle \quad 2 \\
\quad x \\
x + 3 \\
\end{array}\]

\[x = \quad \text{and} \quad y = \quad \]

3. \[\begin{array}{c}
6 \\
3x \\
4 \\
x \\
\end{array}\]

\[x = \quad \text{and} \quad y = \quad \]

5. In the figure, \(\overline{TR} || \overline{PA} \parallel \overline{QS}\) and \(\overrightarrow{BQ}\) and \(\overrightarrow{BS}\) are two transversals that meet at point \(B\).

a. Find the missing lengths \(x, y, z,\) and \(p\).

\[x = \quad \]

\[y = \quad \]

\[z = \quad \]

\[p = \quad \]

b. Determine whether trapezoid \(TRAP\) is similar to trapezoid \(PASQ\). Explain your answer.

\[\begin{array}{c}
3 \text{ cm} \\
5 \text{ cm} \\
1 \text{ cm} \\
2 \text{ cm} \\
\end{array}\]

\[\begin{array}{c}
\overline{\beta} \\
\overrightarrow{T} \\
\overrightarrow{R} \\
\overrightarrow{S} \\
\end{array}\]
6. The altitude to the hypotenuse of a right triangle splits the triangle into two right triangles so that each is similar to the original triangle and to each other.

7. $PQ = 8, QR = \sqrt{41}, RP = 5$

8. $P'(-6, -2), Q'(10, -2), R'(0, 6)$

9. $P'Q' = 16, Q'R' = \sqrt{164} = 2\sqrt{41}, R'P' = 10$

10. yes; because of SSS

**Lesson 8.4**

**Level A**

1. $x = 6.4$

2. $x = 24$

3. $x = 10.5$

4. $x = 7.5$

5. Sample answer: $\triangle AGB \sim \triangle AFC \sim \triangle AED$ by either AA or SAS

6. Sample answer: $\triangle PQR \sim \triangle TSR$, by AA

7. $x = \frac{27}{8} = 3\frac{3}{8}$

8. $x = \frac{2}{3}$

**Lesson 8.4**

**Level B**

1. $x = \frac{50}{11} = 4\frac{6}{11}$

2. $x = \frac{15}{4} = 3\frac{3}{4}$

3. $x = 1.5, y = 9$

4. $x = 9.6, y = 7.5$

5. $x = 18, y = 18\frac{1}{3}$

6. $x = 3.2, y = 11\frac{2}{3}$

7. $PQ \over XZ$ or $PR \over XY$ or $QR \over ZY$

8. $AC \over AD$

9. $x = 2.4$
In Exercises 1 and 2, complete the equation to make a true proportion.

1. \[ \frac{PM}{XN} = \] 

2. \[ \frac{BC}{BD} = \] 

In Exercises 3–6, the triangles are similar. Find \(x\).

3. \(x = \) 

4. \(x = \) 

5. Given: \(\triangle APB \sim \triangle CPD\) 

6. Given: \(\triangle WVS \sim \triangle YVZ, WS = 24, YZ = 30\) 

7. When Susan stands 8 feet from the base of a street lamp, her shadow is 10 feet long. Susan is 5½ feet tall. Find the height, \(h\), of the lamp.
6. The altitude to the hypotenuse of a right triangle splits the triangle into two right triangles so that each is similar to the original triangle and to each other.

7. \(PQ = 8, QR = \sqrt{41}, RP = 5\)

8. \(P'(-6, -2), Q'(10, -2), R'(0, 6)\)

9. \(P'Q' = 16, Q'R' = \sqrt{164} = 2\sqrt{41}, R'P' = 10\)

10. yes; because of SSS

**Lesson 8.4**

**Level A**

1. \(x = 6.4\)

2. \(x = 24\)

3. \(x = 10.5\)

4. \(x = 7.5\)

5. Sample answer: \(\triangle AGB \sim \triangle AFC \sim \triangle AED\) by either AA or SAS

6. Sample answer: \(\triangle PQR \sim \triangle TSR\), by AA

7. \(x = \frac{27}{8} = 3\frac{3}{8}\)

8. \(x = \frac{2}{3}\)

**Lesson 8.4**

**Level C**

1. \(x = 9, y = 7.5\)

2. \(x = \frac{5}{8}, y = \frac{9}{8}\)

3. \(x = \sqrt{12} = 2\sqrt{3}, y = 6.3\)

4. \(x = 15, y = 26\)

5. a. \(x = \frac{2}{3} \text{ cm}, y = \frac{1}{3} \text{ cm}, z = \frac{5}{3} \text{ cm}, p = 8 \text{ cm}\)

   b. Corresponding sides are not proportional, so the trapezoids are not similar.

**Lesson 8.5**

**Level A**

1. \(\frac{PQ}{XZ} \text{ or } \frac{PR}{XY} \text{ or } \frac{QR}{ZY}\)

2. \(\frac{AC}{AD}\)

3. \(x = 2.4\)
4. \( x = \frac{8}{3} \)
5. \( x = 7.5 \)
6. \( x = 40 \)
7. \( h = 9.9 \text{ feet} \)

Lesson 8.5
Level B

1. \( x = \frac{2}{3} \)
2. \( x = 4 \)
3. \( x = 9.6 \)
4. \( x = 15 \)
5. \( x = 20 \text{ meters} \)
6. \( h = 13\frac{1}{3} \text{ feet} \)

Lesson 8.5
Level C

1. \( x = 13\frac{1}{3} \)
2. \( x = 12.6 \)
3. \( x = 4.5 \)
4. \( APC \)
5. Definition of perpendicular lines
6. Reflexive Property of Equality
7. \( CPB \)
8. AA Similarity Postulate
9. Transitive Property of Similarity
10. Corresponding sides of similar triangles are proportional.

Lesson 8.6
Level A

1. a. \( \frac{4}{5} \)
   b. 8 centimeters
2. c. volume
3. b. area
4. b. area
5. a. linear dimensions
6. 13.5 pounds
7. $247.50
8. a. \( 13.69 = 3.7^2 \)
   b. \( 50.653 = 3.7^3 \)
9. \( 6\sqrt{3} \)
10. An animal ten times the size of a normal animal and similar to it would have legs with cross sectional area (and thus ability to support weight) of 100 times normal. Its actual weight would be 1000 times normal. Its bones could not support its weight.

Lesson 8.6
Level B

5. c. volume
6. 1\( \frac{1}{3} \) gallons
Practice Masters Level B

8.5 Indirect Measurement and Additional Similarity Theorems

In Exercises 1–4, apply a similarity theorem to find \( x \).

1. \[ \triangle \]
   \[\begin{array}{c}
   10 \\
   x \\
   8 \\
   \end{array}\]

   \( x = \) __________

2. \[ \triangle \]
   \[\begin{array}{c}
   16 \\
   20 \\
   25 \\
   \end{array}\]

   \( x = \) __________

3. \[ \triangle \]
   \[\begin{array}{c}
   10 \\
   8 \\
   9 \\
   \end{array}\]

   \( x = \) __________

4. \[ \triangle \]
   \[\begin{array}{c}
   24 \\
   20 \\
   18 \\
   \end{array}\]

   \( x = \) __________

5. Use the diagram to find the width, \( w \), of the river.

   \[\begin{array}{c}
   10 \text{ m} \\
   16 \text{ m} \\
   24 \text{ m} \\
   \end{array}\]

   \( w = \) __________

6. On a sunny day Maria, who is 5 feet tall, is standing near a tree. Her shadow is 12 feet long, while the shadow of the tree is 32 feet long. Use this information to find the height of the tree.

   \[\begin{array}{c}
   5 \text{ ft} \\
   12 \text{ ft} \\
   32 \text{ ft} \\
   \end{array}\]

   \( h = \) __________
4. $x = \frac{8\frac{1}{3}}{3}$

5. $x = 7.5$

6. $x = 40$

7. $h = 9.9$ feet

**Lesson 8.5**

**Level B**

1. $x = \frac{2\frac{2}{3}}{3}$

2. $x = 4$

3. $x = 9.6$

4. $x = 15$

5. $x = 20$ meters

6. $h = 13\frac{1}{3}$ feet

**Lesson 8.5**

**Level C**

1. $x = 13\frac{1}{3}$

2. $x = 12.6$

3. $x = 4.5$

4. $APC$

5. Definition of perpendicular lines

6. Reflexive Property of Equality

7. $CPB$

8. AA Similarity Postulate

9. Transitive Property of Similarity

10. Corresponding sides of similar triangles are proportional.

**Lesson 8.6**

   b. 8 centimeters

2. b. area

3. a. linear dimensions

4. c. volume

5. c. volume

6. $1\frac{1}{3}$ gallons
In Exercises 1–3, find $x$.

1. \[ \begin{array}{c}
\text{x = } \underline{\phantom{10}}
\end{array} \]

2. \[ \begin{array}{c}
14 \quad x \quad 16
\end{array} \]

3. \[ \begin{array}{c}
12 \quad x \quad 20
\end{array} \]

A number, $m$, is called the geometric mean between two numbers $a$ and $b$ if $m$ occupies the two middle positions, or means, between $a$ and $b$ in a true proportion. That is, \[ \frac{a}{m} = \frac{m}{b} \] Thus, 4 is the geometric mean between 2 and 8 because \[ \frac{2}{4} = \frac{4}{8} \].

Theorem: The length of the altitude to the hypotenuse of a right triangle is the geometric mean between the lengths of the two segments into which it divides the hypotenuse.

Complete the following proof.

Given: $\overline{AC} \perp \overline{BC}$, $\overline{CP} \perp \overline{AB}$
Prove: $\frac{PA}{PC} = \frac{PC}{PB}$

2. b. area

3. a. linear dimensions

4. c. volume

5. c. volume

6. \( 1\frac{1}{3} \) gallons
1. The ratio of the areas of two squares is $\frac{16}{25}$.
   a. Find the ratio of their sides.
   b. The larger square has sides of length 10 centimeters. Find the side length of the smaller square.

In Exercises 2–5, tell whether the quantity described varies with (a) the linear dimensions, or (b) the area, or (c) the volume of the object.

2. the weight of a statue
3. the number of gallons of paint needed to paint a storage tank
4. the cost to carpet a floor
5. the amount of fencing needed to enclose a yard

In Exercises 6–9, use area and/or volume ratios to solve each problem.

6. A trophy that is 8 inches tall weighs 4 pounds.
   A trophy of similar shape is 12 inches tall.
   How much does the larger trophy weigh?

7. It costs $440 to carpet a room that measures 16 feet by 24 feet. How much would it cost to carpet a similar room that measures 12 feet by 18 feet?

8. The radius of the Earth is about 3.7 times the radius of the moon. Since they both approximate spheres, consider that they are similar.
   a. Find the ratio of their surface areas.
   b. Find the ratio of their volumes.

9. Two similar triangles have areas in the ratio of $\frac{1}{3}$. The smaller triangle has an altitude of length 6 centimeters. Find the length of the corresponding altitude of the larger triangle.

10. Consider the relationship between cross-sectional area, weight, and height. Explain why giant animals 10 times the size of normal animals and similar to them in shape and structure could not exist.
4. \( x = \frac{8}{3} \)

5. \( x = 7.5 \)

6. \( x = 40 \)

7. \( h = 9.9 \) feet

Practice Masters Level B
8.6 Area and Volume Ratios

1. The ratio of the areas of two circles is \( \frac{9}{16} \).
   a. Find the ratio of their radii.
   b. The smaller circle has a radius of 6 centimeters. Find the radius of the larger circle.

In Exercises 2–5, tell whether the quantity described varies with (a) the linear dimensions, or (b) the area, or (c) the volume of the object.

2. the amount of paper needed to wrap a box
   
3. the amount of ribbon needed to tie around the box
   
4. the amount of ingredients in a cake recipe
   
5. the time needed to run a race

In Exercises 6–9, use area and/or volume ratios to solve the problem.

6. Two rooms are similar in shape, with corresponding sides in the ratio of \( \frac{2}{3} \). It takes 3 gallons of paint to cover the walls of the larger room. How much paint will be needed to paint the smaller room?

7. A trophy that is 10 inches tall weighs 4 pounds. Estimate the height of a similar trophy that weighs 6 pounds.

8. A mother has just sewn a cape for herself and plans to scale down the pattern to make a matching cape for her daughter. The mother is 5.5 feet tall and the daughter is 4 feet tall. The mother’s cape required about 1.5 square yards of fabric. About how much fabric will be needed for the daughter’s cape?

9. Suppose that all pizzas have the same thickness and that cost and number of servings both depend only on the surface area. A pizza 10 inches in diameter costs $8.12 and serves 2 people.
   a. Find how much a 14-inch pizza should cost.
   b. How many people would the 14-inch pizza serve?
Lesson 8.6
Level A

1. a. \(\frac{4}{5}\)
   b. 8 centimeters

2. c. volume

3. b. area

4. b. area

5. a. linear dimensions

6. 13.5 pounds

7. $247.50

8. a. \(13.69 = 3.7^2\)
   b. \(50.653 = 3.7^3\)

9. \(6\sqrt{3}\)

10. An animal ten times the size of a normal animal and similar to it would have legs with cross sectional area (and thus ability to support weight) of 100 times normal. Its actual weight would be 1000 times normal. Its bones could not support its weight.

Lesson 8.6
Level B

1. a. \(\frac{3}{4}\)
   b. 8 centimeters

2. b. area

3. a. linear dimensions

4. c. volume

5. c. volume

6. \(1\frac{1}{3}\) gallons

Lesson 8.6
Level C

1. a. linear dimensions

2. area

3. area

4. APC

5. Definition of perpendicular lines

6. Reflexive Property of Equality

7. CPB

8. AA Similarity Postulate

9. Transitive Property of Similarity

10. Corresponding sides of similar triangles are proportional.
Answers

7. about 8.7 inch
8. about 0.8 yard²
9. a. $15.92
   b. about 4 people

Lesson 8.6
Level C

1. a. \( \left( \frac{10}{8} \right)^2 \approx 1.56 \)
   b. \( \left( \frac{10}{8} \right)^3 \approx 1.95 \)

2. \( kl, kw \)
3. \( A = lw \)
4. \( A' = (kl)(kw) = k^2lw = k^2A \)
5. \( \frac{A'}{A} = k^2 \)
6. \( kr \)
7. \( A = \pi r^2 \)
8. \( A' = \pi (kr)^2 = k^2(\pi r^2) = k^2A \)
9. \( \frac{A'}{A} = k^2 \)

10. Area formulas all seem to involve the product of two linear dimensions. Therefore, when each linear dimension is multiplied by \( k \), the product will be multiplied by \( k^2 \).

11. \( ks, ks, kh \)
12. \( V = \frac{1}{3}s^2h \)
13. \( V' = \frac{1}{3}(ks)^2(kh) = \frac{1}{3}k^3s^2h = k^3V \)
14. \( \frac{V'}{V} = k^3 \)
15. \( kr, kh \)
16. \( V = \pi r^2h \)
17. \( V' = \pi (kr)^2(kh) = \pi k^3r^2h = k^3(\pi r^2h) = k^3V \)
18. \( \frac{V'}{V} = k^3 \)
19. \( kr \)
20. \( V = \frac{4}{3}\pi r^3 \)
21. \( V' = \frac{4}{3}\pi (kr)^3 = \frac{4}{3}\pi k^3r^3 = k^3V \)
22. \( \frac{V'}{V} = k^3 \)
23. Volume formulas all seem to involve the product of three linear dimensions. Therefore if each of the dimensions is multiplied by the same scale factor, \( k \), the product will be multiplied by \( k^3 \).
1. Shea wants to adapt a favorite pie recipe for an 8-inch pan to her similar 10-inch pan.

   a. If the crust should be the same thickness for both pies, by what factor should she multiply all crust ingredients?  

   b. By what factor should she multiply all of the filling ingredients?

Compare the quantities related to similar figures, and complete the chart.

23. What property of volume formulas seems to assure that for two similar solids with scale factor of $k$, the ratio of volumes will be $k^3$?
Answers

7. about 8.7 inch
8. about 0.8 yard²
9. a. $15.92
   b. about 4 people

Lesson 8.6
Level C

1. a. \( \left( \frac{10}{8} \right)^2 \approx 1.56 \)
   b. \( \left( \frac{10}{8} \right)^3 \approx 1.95 \)
2. \( kl, kw \)
3. \( A = lw \)
4. \( A' = (kl)(kw) = k^2lw = k^2A \)
5. \( \frac{A'}{A} = k^2 \)
6. \( kr \)
7. \( A = \pi r^2 \)
8. \( A' = \pi (kr)^2 = k^2(\pi r^2) = k^2A \)
9. \( \frac{A'}{A} = k^2 \)

10. Area formulas all seem to involve the product of two linear dimensions. Therefore, when each linear dimension is multiplied by \( k \), the product will be multiplied by \( k^2 \).

11. \( ks, ks, kh \)
12. \( V = \frac{1}{3}s^2h \)
13. \( V' = \frac{1}{3}(ks)^2(kh) = \frac{1}{3}k^3s^2h = k^3V \)
14. \( \frac{V'}{V} = k^3 \)
15. \( kr, kh \)
16. \( V = \pi r^2h \)
17. \( V' = \pi(kr)^2(kh) = \pi k^3r^2h = k^3(\pi r^2h) = k^3V \)
18. \( \frac{V'}{V} = k^3 \)
19. \( kr \)
20. \( V = \frac{4}{3}\pi r^3 \)
21. \( V' = \frac{4}{3}\pi (kr)^3 = \frac{4}{3}\pi k^3r^3 = k^3V \)
22. \( \frac{V'}{V} = k^3 \)
23. Volume formulas all seem to involve the product of three linear dimensions. Therefore if each of the dimensions is multiplied by the same scale factor, \( k \), the product will be multiplied by \( k^3 \).
Use the figure of \( \odot M \) below for Exercises 1–3.

1. Name three radii of the circle. __________________
2. Name a diameter of the circle. __________________
3. Name a chord of the circle. __________________

Use the figure of \( \odot P \) below for Exercises 4–7.

4. List three major arcs of the circle. __________________
5. List three minor arcs of the circle. __________________
6. If \( \angle FHG = 61^\circ \), what is \( \angle FPG \)? __________________
7. If \( \angle FPG = 96^\circ \), what is \( \angle FHG \)? __________________

Determine the length of the arc with the given central angle measure, \( m\angle W \), in a circle with radius \( r \). Round your answers to the nearest hundredth.

8. \( m\angle W = 45^\circ \); \( r = 5 \) ________________
9. \( m\angle W = 90^\circ \); \( r = 10 \) ________________
10. \( m\angle W = 60^\circ \); \( r = 8 \) ________________
11. \( m\angle W = 120^\circ \); \( r = 20 \) ________________
12. \( m\angle W = 76^\circ \); \( r = 5.2 \) ________________
13. \( m\angle W = 196^\circ \); \( r = 12 \) ________________

Determine the degree measure of an arc with the given length, \( L \), in a circle with radius \( r \). Round your answers to the nearest whole degree.

14. \( L = 10 \); \( r = 7 \) __________
15. \( L = 14 \); \( r = 20 \) __________
16. \( L = 25 \); \( r = 12 \) __________
17. \( L = 36 \); \( r = 18 \) __________
18. \( L = 7 \); \( r = 13 \) __________
19. \( L = 4.2 \); \( r = 6 \) __________

For Exercises 20–23, find the degree measures of each arc by using the central angle measures given in \( \odot M \).

Answers

11. 3.58
12. 27°
13. 53°
14. 127°
15. 127°

16. Since all radii of a circle are congruent, then $BP = PD$. If a diameter of a circle is perpendicular to a chord, then it bisects that chord, $BR = \frac{1}{2} (AB)$ and $DS = \frac{1}{2} (DC)$. Since $AB = CD$, then by the transitive property of equality, $BR = DS$. By the HL congruence theorem, $\triangle BRP \cong \triangle DSP$. Hence, CPCTC, $RP = PS$.

1. Which of the following circles contains an inscribed angle?

   a.  
   b.  
   c.  
   d.  

Refer to \( \odot P \) for Exercises 2–5.

2. Identify the inscribed angle in \( \odot P \).

3. Identify the major arc.

4. If the intercepted arc of the inscribed angle is 130°, what is the measure of the inscribed angle?

5. If \( \overline{BC} \) is a semicircle, then what is the \( m \angle BAC \)?

In \( \odot M \), \( \overline{AC} = 156° \), \( \overline{AB} \equiv \overline{CB} \). Find the following:

6. \( \angle ABC \)

7. \( \angle AMC \)

8. \( \angle BMC \)

9. \( \angle BMA \)

In \( \odot M \), \( \overline{AC} \) is a diameter, \( \overrightarrow{CF} \) is tangent to \( \odot M \) at point \( C \), and \( \angle BMA = 118° \). Find the following:

10. \( \widehat{AB} \)

11. \( \widehat{BC} \)

12. \( \angle DMC \)

13. \( \angle CMB \)

14. \( \angle MCD \)

15. \( \angle FCD \)

In \( \odot M \), \( \overrightarrow{BA} \) and \( \overrightarrow{BC} \) are tangents, \( \angle ADC = 64° \). Find the following:

16. \( \angle AMC \)

17. \( \angle MAB \)

18. \( \angle ABC \)

19. \( \widehat{ADC} \)
5. 46.96
6. 10.82
7. 10.18
8. 36.14

In \( \text{\( M \)} \), chord \( AD \cong AC \), \( \angle DMC = 154^\circ \). Find the following:

1. \( \angle BGC \)  
2. \( \angle DAC \)  
3. \( \overarc{DC} \)  
4. \( \overarc{AC} \)  
5. \( \overarc{BC} \)  
6. \( \angle ADM \)  

In \( \text{\( M \)} \), \( AC \) is a diameter, \( \overrightarrow{DC} \) is tangent to the circle at point \( C \), and \( \angle B C = 78^\circ \). Find the following:

7. \( \angle BAC \)  
8. \( \angle B EC \)  
9. \( \overarc{AB} \)  
10. \( \angle AC B \)  
11. \( \angle ABC \)  
12. \( \angle ACD \)  

In \( \text{\( M \)} \), if \( BC = 12 \), \( CD = 16 \), and \( AC = 20 \), find the following:

13. \( BD \)  
14. \( AD \)  

In the circle, \( \overarc{AB} = x + 1 \), \( \angle DEB = 7x - 2 \), \( \overarc{AE} = 7x - 9 \), \( mED = 2x \), and \( mBC = \frac{1}{2} mCD \). Find the following:

15. \( \angle BAD \)  
16. \( \angle BED \)  
17. \( \angle BEC \)  
18. \( \overarc{CD} \)  
19. \( \overarc{AB} \)  
20. \( \overarc{BAE} \)  
21. \( \angle ABC \)  
22. \( \angle AHB \)  

Decide whether the following statements are always true, sometimes true, or never true.

23. A secant is a chord.  

24. The measure of an inscribed angle is equal to the measure of a central angle.  

25. The measure of an inscribed angle is equal to one-half the measure of its intercepted arc.
5. 46.96
6. 10.82

In \( \odot M \), \( m \angle AMC = 102^\circ \), \( m \angle ABC = 4x - 2 \), \( m \angle BCA = 64^\circ \) and \( \overline{AB} \equiv \overline{BC} \). Find the following:

1. \( m \angle ABC \)  
2. \( m \angle BAE \)  
3. \( \widehat{AD} \)  
4. \( m \widehat{BE} \)

In \( \odot M \), \( \overline{CE} \) is tangent to the inner circle at point \( E \), \( \overline{BD} \) and \( \overline{CD} \) are secants. If \( m \widehat{CB} = x^2 + 2x \), \( m \overline{BA} = 3x^2 - 4 \), and \( m \widehat{AD} = 4x + 4 \), find:

5. \( m \widehat{AD} \)  
6. \( m \overline{AB} \)  
7. \( m \overline{GKF} \)  
8. \( m \angle BDC \)  
9. \( m \angle MEC \)  
10. \( m \angle EMC \)

The figure below contains concentric circles with a common center at \( M \), \( \overline{AB} \) and \( \overline{DC} \) are tangent to the inner circle at points \( E \) and \( G \), respectively, \( m \overline{EF} = 3x + 7 \), \( m \overline{EGF} = 5x + 1 \), and \( m \angle ABD = x - 3 \). Find the following:

11. \( m \angle ABD \)  
12. \( m \widehat{AD} \)  
13. \( m \angle BDC \)  
14. \( m \angle EMB \)  
15. If \( m \overline{BC} = 3x + 7 \), are the tangents parallel? Explain.

In the figures below, \( \odot M \equiv \odot N \), \( \angle BFC \equiv \angle XVy \), \( \angle ADB \equiv \angle ZWy \), \( \overline{BF} = \overline{BD} = \overline{WY} = \overline{VY} \), \( \overline{VW} = \frac{34x}{3} \), \( \overline{VZ} = 15x + 0.01 \), and \( \overline{ZY} = 106x - 12 \). Find the following:

16. \( m \overline{FD} \)  
17. \( m \angle ADB \)  
18. \( m \angle FBD \)  
19. \( m \angle WNX \)  
20. \( m \angle CMD \)

9.4 Angles Formed by Secants and Tangents

In \(\odot S\), \(AB\) is tangent to the circle at point \(A\), \(\angle B = x\), \(\angle AC = y\), \(\angle CD = 3y\), \(\angle DEA = x + 3y\). Find the following:

1. \(\angle CD\) ______________
2. \(x\) ______________
3. \(y\) ______________
4. \(\angle AED\) ______________

In the figure, \(ABCD\) is an inscribed quadrilateral. The measure of \(AB = 4x - 25\), \(\angle BC = x\), \(\angle CD = 2x + 20\), and \(\angle DA = 3x - 35\). Find the following:

5. \(\angle 1\) ______________
6. \(\angle 2\) ______________
7. \(\angle 3\) ______________
8. \(\angle 4\) ______________
9. \(\angle 5\) ______________
10. \(\angle CAF\) ______________
11. \(\angle CDA\) ______________
12. \(\angle DCA\) ______________

In \(\odot M\), \(AB\) is a diameter, rays \(PC\), \(PQ\) and \(BY\) are tangents to the circle at \(C\), \(A\), and \(B\), respectively, \(\angle AC = 45^\circ\), \(\angle CF = 40^\circ\), \(\angle FG = 35^\circ\), and \(\angle ABD = 46^\circ\). Find the following:

13. \(\angle CAD\) ______________
14. \(\angle CBD\) ______________
15. \(\angle ACF\) ______________
16. \(\angle ADB\) ______________
17. \(\angle 1\) ______________

9.5 Segments of Tangents, Secants, and Chords

Ray $FD$ is tangent to $\odot M$ at point $D$, $GC \parallel FD$, $m\overarc{BC} = 76^\circ$, $GF = 4$, $FD = 6$, $ED = 2$, $m\overarc{GD} = 52^\circ$, and $BM = 5$. Find the following:

1. $m\angle BFD$ 
2. $m\angle DEC$
3. $m\angle AG$
4. $m\angle AB$
5. $GM$
6. $GC$

In $\odot M$, $AB$ and $BC$ are tangent to the circle at points $A$ and $C$, respectively. If $m\angle AC = 3x$, $m\angle ABC = x^2$, and $m\angle GMA = 12x$, find the following:

7. $m\angle AC$
8. $m\angle ABC$
9. $m\angle CD$
10. $m\angle GD$

In $\odot M$, if $AB = 2x$, $BE = x$, $ED = 12$, $CF = x$, $GC = 8x$, $AM = 9$, $FC = 2$, $ED = 12$, $BE = 3$, and $DF$ is twice the length of $EF$, find the following.

11. $GF$
12. $BD$
13. $DF$
14. $AD$

In the circle, $AB$ is tangent to the circle at $A$, $AB = 3x$, $CB = x + 5$, and $DC = 8x - 23$. Find the following:

15. $AB$
16. $CB$
17. $DC$

Solve.

18. In the figure at the right, $AB$ and $CD$ are internally tangent to the circles at $A$, $B$, $C$, and $D$. Find $AB$.

19. $PA$ is tangent to circle $M$ at $A$. $PC$ is a secant to circle $M$ that intersects the circle at points $B$ and $C$. If $PB = 10$ and $PC = 40$, find $PA$.

Write the equation for the circle with the given characteristics.

5. center \((2m, 4)\), radius 7
6. center \((-3, 0)\), \((9, 2\sqrt{10})\) as one endpoint of the diameter
7. endpoints of the diameter are \((4, 2)\) and \((6, 2)\)
8. center \((7, 3)\), tangent to the \(x\)-axis
9. center \((7, 3)\), tangent to the \(y\)-axis
10. center on the line \(y = x\), tangent to the \(x\)-axis at 5
11. center on \(y = 2x\), tangent to the \(y\)-axis at 2
12. center \((7, -2)\) and contains the point \((3, 3)\)
13. When both squared terms are put on the same side of the equation of a circle, what do you notice about the coefficients?
14. What do you notice about the signs of the coefficients from Exercise 13?
15. Points \((-3, 4), (3, -4)\) and \((0, 5)\) are all contained by the circle \(x^2 + y^2 = 25\). Describe the transformation and find the corresponding points contained by the circle \((x - 1)^2 + (y - 3)^2 = 25\).
7. \((x + 3)^2 + (y - 4)^2 = 9\)  
8. \((x - 2)^2 + (y - 13)^2 = 64\)  
9. \((x - 4)^2 + (y - 6)^2 = 64\)  
10. \((x + 5)^2 + (y + 4)^2 = 36\)  
11. \((13, 0), (-13, 0), (0, 13), (0, -13)\)  
12. \((-6\sqrt{2}, 0), (6\sqrt{2}, 0), (0, -6\sqrt{2}), (0, 6\sqrt{2})\)  
13. \((0, -5.6), (4, 0), (0, 5.6), (-8, 0)\)  
14. none, (0, 5), (0, 3)  
15. none, none  
16. \((-9, 0) (9, 0) (0, -9) (0, 9)\)

Lesson 9.6  
Level B  
1. \((0, 0), 3\sqrt{3}\)  
2. \((1, -2), \sqrt{3}\)  
3. \((-\sqrt{5}, \sqrt{2}), \sqrt{3}\)  
4. \((m - n), \sqrt{w}\)  
5. \((x + 2)^2 + \left(y - \frac{1}{2}\right)^2 = 2\)  
6. \((x - 2)^2 + (y - 11)^2 = 9\)  
7. \((x + 6)^2 + (y - 3)^2 = 36\)  
8. \(\left(x - \frac{3}{4}\right)^2 + \left(y - \frac{1}{2}\right)^2 = 2.25\)  
9. \((x - 3)^2 + (y - 4)^2 = 25\)  
10. \((x + 4)^2 + (y - 4)^2 = 16\)  
\((x + 4)^2 + (y + 4)^2 = 16\)  
\((x - 4)^2 + (y + 4)^2 = 16\)  
\((x - 4)^2 + (y - 4)^2 = 16\)  
11. \((x + 3)^2 + y^2 = 25\)  
12. \((x + 4)^2 + (y - 4)^2 = 4\)  
13. \((x - 4)^2 + (y + 2)^2 = 16\)  

Lesson 9.6  
Level C  
1. \((-2, 5), 3\)  
2. \((6, 1), 1\)  
3. \((-1, -2), 4\)  
4. \((2, -3), 4\)  
5. \((x - 2m)^2 + (y - 4)^2 = 49\)  
6. \((x + 3)^2 + y^2 = 184\)  
7. \((x - 5)^2 + (y - 2)^2 = 1\)  
8. \((x - 7)^2 + (y + 3)^2 = 9\)  
9. \((x - 7)^2 + (y - 3)^2 = 49\)  
10. \((x - 5)^2 + (y - 5)^2 = 25\)  
11. \((x - 1)^2 + (y - 2)^2 = 1\)  
12. \((x - 7)^2 + (y + 2)^2 = 41\)  
13. The coefficients are the same.  
14. The signs on the coefficients are equal.  
15. moved 1 unit right, 3 units up;  
\((-2, 7), (4, -1), (1, 8)\)
Practice Masters Level A

10.1 Tangent Ratios

In Exercises 1 and 2, measure the sides of the triangle to find $\tan A$.

1. $\tan A \approx \ldots$

2. $\tan A \approx \ldots$

3. Use the triangle in Exercise 1.
   a. Use a protractor to find $m\angle A$. 
   b. Use the $\tan^{-1}$ key on your calculator, with the value of $\tan A$ found in Exercise 1, to find $m\angle A$. 

4. Use the triangle in Exercise 2.
   a. Use a protractor to find $m\angle A$.
   b. Use the $\tan^{-1}$ key on your calculator, with the value of $\tan A$ found in Exercise 2, to find $m\angle A$.

In Exercises 5 and 6, find $\tan B$ for each triangle.

5. $\tan B = \ldots$

6. $\tan B = \ldots$

7. Use a scientific or graphics calculator to find the tangent of each angle. Round to the nearest hundredth.
   a. $\tan 56^\circ = \ldots$
   b. $\tan 12^\circ = \ldots$
   c. $\tan 85^\circ = \ldots$
   d. $\tan 60^\circ = \ldots$

8. Use a scientific or graphics calculator to find the inverse tangent of each ratio. Round to the nearest degree.
   a. $\tan^{-1}\left(\frac{2}{3}\right) = \ldots$
   b. $\tan^{-1}(0.4) = \ldots$
   c. $\tan^{-1}(1.426) = \ldots$
   d. $\tan^{-1}\left(\frac{13}{3}\right) = \ldots$
Lesson 10.1
Level A

1. \( \frac{BC}{AC} \approx \frac{3.3\text{cm}}{2.4\text{cm}} = 1.375 \)
2. \( \frac{BC}{AC} \approx \frac{1.7\text{cm}}{3.8\text{cm}} = 0.447 \)
3. a. 54°
   b. \( \tan^{-1} \left( \frac{3.3}{2.4} \right) \approx 53.97° \)
4. a. 24°
   b. \( \tan^{-1} \left( \frac{1.7}{3.8} \right) \approx 24.1° \)
5. \( \frac{2}{\sqrt{21}} \approx 0.4364 \)
6. \( \frac{3}{1} = 3 \)
7. a. 1.48
   b. 0.21
   c. 11.43
   d. 1.73
8. a. 34°
   b. 22°
   c. 55°
   d. 77°

c. 57.29
d. 0.19

4. a. 39°
b. 35°
c. 70°
d. 75°

5. \( \tan 38° = \frac{x}{25}, x = 19.53 \)
6. \( \tan 20° = \frac{40}{x}, x = 109.90 \)

Lesson 10.1
Level C

1. \( \tan 55° = \frac{x}{12}, x = 17.14 \)
2. \( \tan 70° = \frac{20}{x}, x = 7.28 \)
3. \( \tan \theta = \frac{5}{\sqrt{11}}, \theta \approx 56° \)
4. \( \tan \theta = \frac{5}{2}, \theta \approx 68° \)
5. \( x \approx 4.5, y \approx 9.5 \)
6. \( \theta = \tan^{-1} \left( \frac{8}{10} \right) \approx 39° \)

Lesson 10.1
Level B

1. \( \frac{3}{2\sqrt{10}} \approx 0.4743 \)
2. \( \frac{5}{2} = 2.5 \)
3. a. 3.27
   b. 0.32

Lesson 10.2
Level A

1. a. \( \frac{3}{5} \)
b. \( \frac{3}{5} \)
c. \( \frac{4}{3} \)
In Exercises 1 and 2, find tan \( B \) for each triangle.

1. \[ \tan B = \frac{2\sqrt{10}}{3} \]

2. \[ \tan B = \frac{5}{\sqrt{29}} \]

3. Use a scientific or graphics calculator to find the tangent of each angle. Round to the nearest hundredth.

   a. \( \tan 73^\circ = \) 
   
   b. \( \tan 18^\circ = \) 
   
   c. \( \tan 89^\circ = \) 
   
   d. \( \tan 11^\circ = \) 

4. Use a scientific or graphics calculator to find the inverse tangent of each ratio. Round to the nearest degree.

   a. \( \tan^{-1}\left(\frac{4}{5}\right) = \) 
   
   b. \( \tan^{-1}(0.7) = \) 
   
   c. \( \tan^{-1}(2.75) = \) 
   
   d. \( \tan^{-1}\left(\frac{15}{4}\right) = \) 

For Exercises 5 and 6, use the definition of the tangent ratio to write an equation involving \( x \). Find the tangent of the given angle with a calculator, and solve the equation to find the unknown side of the triangle. Round your answers to the nearest hundredth.

5. \[ \tan 38^\circ = \frac{x}{25} \]

   \[ x = \] 

6. \[ \tan 20^\circ = \frac{40}{x} \]

   \[ x = \]
Lesson 10.1
Level A
1. \( \frac{BC}{AC} \approx \frac{3.3\text{cm}}{2.4\text{cm}} = 1.375 \)
2. \( \frac{BC}{AC} \approx \frac{1.7\text{cm}}{3.8\text{cm}} = 0.447 \)
3. a. 54°
   b. \( \tan^{-1}\left(\frac{3.3}{2.4}\right) \approx 53.97° \)
4. a. 24°
   b. \( \tan^{-1}\left(\frac{1.7}{3.8}\right) \approx 24.1° \)
5. \( \frac{2}{\sqrt{21}} \approx 0.4364 \)
6. \( \frac{3}{1} = 3 \)
7. a. 1.48
   b. 0.21
   c. 11.43
   d. 1.73
8. a. 34°
   b. 22°
   c. 55°
   d. 77°

Lesson 10.1
Level B
1. \( \frac{3}{2\sqrt{10}} \approx 0.4743 \)
2. \( \frac{5}{2} = 2.5 \)
3. a. 3.27
   b. 0.32

Lesson 10.1
Level C
1. \( \tan 55° = \frac{x}{12}, x = 17.14 \)
2. \( \tan 70° = \frac{20}{x}, x = 7.28 \)
3. \( \tan \theta = \frac{5}{\sqrt{11}}, \theta \approx 56° \)
4. \( \tan \theta = \frac{5}{2}, \theta \approx 68° \)
5. \( x \approx 4.5, y \approx 9.5 \)
6. \( \theta = \tan^{-1}\left(\frac{8}{10}\right) \approx 39° \)

Lesson 10.2
Level A
1. a. \( \frac{3}{5} \)
   b. \( \frac{3}{5} \)
   c. \( \frac{4}{3} \)
   d. \( \frac{4}{3} \)
For Exercises 1 and 2, use the definition of the tangent ratio to write an equation involving $x$. Find the tangent of the given angle with a calculator, and solve the equation to find the unknown side of the triangle. Round your answers to the nearest hundredth.

1. \[ \tan(35^\circ) = \frac{x}{12} \]

2. \[ \tan(70^\circ) = \frac{x}{20} \]

In Exercises 3 and 4, use the definition of the tangent ratio to write an equation involving the unknown angle $\theta$. Use a calculator to solve that equation for $\theta$. Round your answers to the nearest degree.

3. \[ \tan(\theta) = \frac{5}{\sqrt{11}} \]

4. \[ \tan(\theta) = \frac{2}{\sqrt{29}} \]

5. Use the tangent ratio and the Pythagorean Theorem to find $x$ and $y$ in the triangle at the right. Round answers to the nearest tenth.

\[ x = \quad \quad y = \quad \]

6. On a standard staircase, the depth of each step is 10 inches and the height of each riser is 8 inches. A plank is to be laid on the staircase to form a ramp. Find the angle that the ramp will make with the ground.
Answers

Lesson 10.1
Level A

1. \( \frac{BC}{AC} \approx \frac{3.3\text{cm}}{2.4\text{cm}} = 1.375 \)
2. \( \frac{BC}{AC} \approx \frac{1.7\text{cm}}{3.8\text{cm}} = 0.447 \)
3. a. 54°
   b. \( \tan^{-1} \left( \frac{3.3}{2.4} \right) \approx 53.97° \)
4. a. 24°
   b. \( \tan^{-1} \left( \frac{1.7}{3.8} \right) \approx 24.1° \)
5. \( \frac{2}{\sqrt{21}} \approx 0.4364 \)
6. \( \frac{3}{1} = 3 \)
7. a. 1.48
   b. 0.21
   c. 11.43
   d. 1.73
8. a. 34°
   b. 22°
   c. 55°
   d. 77°

Lesson 10.1
Level B

1. \( \frac{3}{2\sqrt{10}} \approx 0.4743 \)
2. \( \frac{5}{2} = 2.5 \)
3. a. 3.27
   b. 0.32

Lesson 10.1
Level C

1. \( \tan 55° = \frac{x}{12}, x = 17.14 \)
2. \( \tan 70° = \frac{20}{x}, x = 7.28 \)
3. \( \tan \theta = \frac{5}{\sqrt{11}}, \theta \approx 56° \)
4. \( \tan \theta = \frac{5}{2}, \theta \approx 68° \)
5. \( x \approx 4.5, y \approx 9.5 \)
6. \( \theta = \tan^{-1} \frac{8}{10} \approx 39° \)

Lesson 10.2
Level A

1. a. \( \frac{3}{5} \)
   b. \( \frac{3}{5} \)
   c. \( \frac{4}{3} \)
1. Refer to \( \triangle ABC \).

2. Refer to \( \triangle DEF \).

Find each of the following.

\[ \begin{align*}
\text{a. } \sin A & = \frac{3}{\sqrt{13}} \\
\text{b. } \cos B & = \frac{2}{\sqrt{13}} \\
\text{c. } \tan B & = \frac{2}{3}
\end{align*} \]

In Exercises 3 and 4, use a scientific or graphics calculator.

3. Round answers to four decimal places.

\[ \begin{align*}
\text{a. } \sin 74^\circ & = \frac{3}{\sqrt{13}} \\
\text{b. } \cos 22^\circ & = \frac{2}{\sqrt{13}} \\
\text{c. } \tan 48^\circ & = \frac{2}{3}
\end{align*} \]

4. Round answers to the nearest degree.

\[ \begin{align*}
\text{a. } \sin^{-1} \frac{1}{2} & = 30^\circ \\
\text{b. } \cos^{-1} \frac{1}{2} & = 60^\circ \\
\text{c. } \tan^{-1} 3 & \approx 71.6^\circ
\end{align*} \]

In Exercises 5 and 6, use a trigonometric ratio to find the height of the triangle.

5. 

6. 

7. Robby is flying his kite. The hand holding the string is 4 feet above ground level, and the string makes an angle of 55° above horizontal. When he has 100 feet of string out, how high is the kite above the ground?
Lesson 10.1
Level A

1. \( \frac{BC}{AC} \approx \frac{3.3\text{cm}}{2.4\text{cm}} = 1.375 \)

2. \( \frac{BC}{AC} \approx \frac{1.7\text{cm}}{3.8\text{cm}} = 0.447 \)

3. a. 54°
   
   b. \( \tan^{-1} \left( \frac{3.3}{2.4} \right) \approx 53.97° \)

4. a. 24°
   
   b. \( \tan^{-1} \left( \frac{1.7}{3.8} \right) \approx 24.1° \)

5. \( \frac{2}{\sqrt{21}} \approx 0.4364 \)

6. \( \frac{3}{1} = 3 \)

7. a. 1.48
   
   b. 0.21
   
   c. 11.43
   
   d. 1.73

8. a. 34°
   
   b. 22°
   
   c. 55°
   
   d. 77°

Lesson 10.1
Level C

1. \( \tan 55° = \frac{x}{12}, x = 17.14 \)

2. \( \tan 70° = \frac{20}{x}, x = 7.28 \)

3. \( \tan \theta = \frac{5}{\sqrt{11}}, \theta \approx 56° \)

4. \( \tan \theta = \frac{5}{2}, \theta \approx 68° \)

5. \( x \approx 4.5, y \approx 9.5 \)

6. \( \theta = \tan^{-1} \frac{8}{10} \approx 39° \)

Lesson 10.2
Level A

1. a. \( \frac{3}{5} \)
   
   b. \( \frac{3}{5} \)
   
   c. \( \frac{4}{3} \)
   
   d. \( \frac{4}{3} \)
2. a. $\angle E$
   b. $\angle E$
   c. $\angle D$
3. a. 0.9613
   b. 0.9272
   c. 1.1106
4. a. $30^\circ$
   b. $60^\circ$
   c. $72^\circ$
5. $h = 12 \sin 58^\circ \approx 10.18$
6. $h = 4 \sin 65^\circ \approx 3.625$
7. $\theta = \tan^{-1} \left( \frac{12}{5} \right) \approx 67^\circ$
8. $\theta = \sin^{-1} \left( \frac{2}{5} \right) \approx 24^\circ$

Lesson 10.2
Level C
1. $x = 35 \cos 27^\circ \approx 31.2$
2. $x = \frac{40}{\sin 50^\circ} \approx 52.2$
3. $x = 15 \tan 72^\circ \approx 46.2$
4. $x = 24 \sin 37^\circ \approx 14.4$
5. $\theta = \cos^{-1} \left( \frac{4}{5} \right) \approx 37$
6. $\theta = \tan^{-1} \left( \frac{6}{4} \right) \approx 56^\circ$
7. $\theta = \tan^{-1} (1.5) \approx 56^\circ, d \approx 1.8$ mile
8. Not an identity. Sample answer: For a counterexample, you could use $
\theta = 20^\circ \tan 20^\circ \cdot \sin 20^\circ \approx 0.1245$, but
$\cos 20^\circ \approx 0.9397$.
9. Is an identity. Proof:
$$
tan(90 - \theta) = \frac{\sin(90 - \theta)}{\cos(90 - \theta)} = \frac{\cos \theta}{\sin \theta}
$$
1. Refer to \( \triangle ABC \).

Find each of the following.

\[ a. \ \sin A \]  
\[ b. \ \cos B \]  
\[ c. \ \tan B \]

Find each of the following.

\[ a. \ \sin \theta = 0.6 \]  
\[ b. \ \cos \theta = 0.6 \]  
\[ c. \ \tan \theta = \frac{3}{4} \]

In Exercises 3 and 4, use a scientific or graphics calculator.

3. Round answers to four decimal places.

\[ a. \ \sin 56^\circ \]  
\[ b. \ \cos 34^\circ \]  
\[ c. \ \tan 18^\circ \]

4. Round answers to the nearest degree.

\[ a. \ \sin^{-1} \frac{2}{3} \]  
\[ b. \ \cos^{-1} \frac{1}{\sqrt{2}} \]  
\[ c. \ \tan^{-1} 2.345 \]

In Exercises 5 and 6, use a trigonometric ratio to find the height of the triangle.

5.

\[ \text{Height: } h \]

6.

\[ \text{Height: } h \]

In Exercises 7 and 8, use a trigonometric ratio to find the angle measure \( \theta \). Round your answers to the nearest degree.

7.

\[ \theta \]

8.

\[ \theta \]
2. a. $\angle E$
b. $\angle E$
c. $\angle D$
3. a. 0.9613
   
b. 0.9272
   
c. 1.1106
4. a. 30°
   
b. 60°
   
c. 72°
5. $h = 12 \sin 58° \approx 10.18$
6. $h = 4 \sin 65° \approx 3.625$
7. $\theta = \tan^{-1} \left( \frac{12}{5} \right) \approx 67°$
8. $\theta = \sin^{-1} \left( \frac{2}{5} \right) \approx 24°$

Lesson 10.2
Level B

1. $x = 35 \cos 27° \approx 31.2$
2. $x = \frac{40}{\sin 50°} \approx 52.2$
3. $x = 15 \tan 72° \approx 46.2$
4. $x = 24 \sin 37° \approx 14.4$
5. $\theta = \cos^{-1} \left( \frac{4}{5} \right) \approx 37°$
6. $\theta = \tan^{-1} \left( \frac{6}{4} \right) \approx 56°$
7. $\theta = \tan^{-1} (1.5) \approx 56°$, $d \approx 1.8$ mile
8. Not an identity. Sample answer: For a
counterexample, you could use
$\theta = 20° \tan 20° \cdot \sin 20° \approx 0.1245$, but
$\cos 20° \approx 0.9397$.
9. Is an identity. Proof:

$$\tan(90 - \theta) = \frac{\sin(90 - \theta)}{\cos(90 - \theta)} = \frac{\cos \theta}{\sin \theta}$$
In Exercises 1–4, use a trigonometric ratio to find \( x \) for each triangle.

1. \( \begin{align*}
15 & \quad 27^\circ \\
35 & \quad x
\end{align*} \)

2. \( \begin{align*}
50^\circ & \quad 40 \\
50^\circ & \quad x
\end{align*} \)

3. \( \begin{align*}
15 & \quad 72^\circ \\
72^\circ & \quad x
\end{align*} \)

4. \( \begin{align*}
24 & \quad 37^\circ \\
37^\circ & \quad x
\end{align*} \)

In Exercises 5 and 6, use a trigonometric ratio to find angle \( \theta \). Round to the nearest degree.

5. \( \begin{align*}
3 & \quad 5 \\
4 & \quad 5 \\
\theta & \quad \theta
\end{align*} \)

6. \( \begin{align*}
6 & \quad 4 \\
\theta & \quad \theta
\end{align*} \)

7. Joey is walking home from the library. He can either walk for 1 mile along the highway, then turn right and walk another 1.5 miles on his street, or he can cut across a large field straight to his house. At what angle, \( \theta \), should he head off the highway, and how far, \( d \), will he walk if he cuts across the field?

\[ \theta = \text{__________} \quad d = \text{__________} \]

In Exercises 8–9, determine which of the following statements are identities. Use the identities given in this lesson to prove which are identities and a counterexample to prove which are not identities.

8. \( \tan \theta \sin \theta = \cos \theta \)

9. \( \tan(90 - \theta) = \frac{\cos \theta}{\sin \theta} \)
2. a. \( \angle E \)
   b. \( \angle E \)
   c. \( \angle D \)
3. a. 0.9613
   b. 0.9272
   c. 1.1106
4. a. 30°
   b. 60°
   c. 72°
5. \( h = 12 \sin 58° \approx 10.18 \)
6. \( h = 4 \sin 65° \approx 3.625 \)
7. \( \theta = \tan^{-1} \left( \frac{12}{5} \right) \approx 67° \)
8. \( \theta = \sin^{-1} \left( \frac{2}{5} \right) \approx 24° \)

**Lesson 10.2**

**Level C**

1. \( x = 35 \cos 27° \approx 31.2 \)
2. \( x = \frac{40}{\sin 50°} \approx 52.2 \)
3. \( x = 15 \tan 72° \approx 46.2 \)
4. \( x = 24 \sin 37° \approx 14.4 \)
5. \( \theta = \cos^{-1} \left( \frac{4}{5} \right) \approx 37° \)
6. \( \theta = \tan^{-1} \left( \frac{6}{4} \right) = 56° \)
7. \( \theta = \tan^{-1} (1.5) \approx 56°, d \approx 1.8 \text{ mile} \)
8. Not an identity. Sample answer: For a counterexample, you could use \( \theta = 20° \tan 20° \cdot \sin 20° \approx 0.1245 \), but \( \cos 20° \approx 0.9397 \).
9. Is an identity. Proof:

\[
\tan(90° - \theta) = \frac{\sin(90° - \theta)}{\cos(90° - \theta)} = \frac{\cos \theta}{\sin \theta}
\]
10.3 Extending the Trigonometric Ratios

In Exercises 1–6, sketch a ray with the given angle \( \theta \) with the positive \( x \)-axis. Label the coordinates of the point on the ray at a distance of 1 from the origin. Use these values and the unit circle definitions of sine and cosine to give the sine and cosine of each angle. Leave your answers in simplified radical form.

1. \( 60^\circ \)
   - \( \sin 60^\circ = \)
   - \( \cos 60^\circ = \)

2. \( 90^\circ \)
   - \( \sin 90^\circ = \)
   - \( \cos 90^\circ = \)

3. \( 120^\circ \)
   - \( \sin 120^\circ = \)
   - \( \cos 120^\circ = \)

4. \( -45^\circ \)
   - \( \sin(-45^\circ) = \)
   - \( \cos(-45^\circ) = \)

5. \( 210^\circ \)
   - \( \sin 210^\circ = \)
   - \( \cos 210^\circ = \)

6. \( 180^\circ \)
   - \( \sin 180^\circ = \)
   - \( \cos 180^\circ = \)

In Exercises 7–12, use a calculator to find the sine and cosine of each angle to four decimal places. Compare with the values you found in Exercises 1–6.

7. \( \sin 60^\circ \) \( \cos 60^\circ \)
8. \( \sin 90^\circ \) \( \cos 90^\circ \)
9. \( \sin 120^\circ \) \( \cos 120^\circ \)
10. \( \sin(-45^\circ) \) \( \cos (-45^\circ) \)
11. \( \sin 210^\circ \) \( \cos 210^\circ \)
12. \( \sin 180^\circ \) \( \cos 180^\circ \)

13. a. If \( \sin \theta \) is positive, in what quadrant(s) will the terminal ray of angle \( \theta \) be located?
   - 

   b. Find all possible values of \( \theta \) between \( 0^\circ \) and \( 360^\circ \) such that \( \sin \theta = 0.7623 \).

14. a. If \( \cos \theta \) is negative, in what quadrant(s) will the terminal ray of angle \( \theta \) be located?
   - 

   b. Find all possible values of \( \theta \) between \( 0^\circ \) and \( 360^\circ \) such that \( \cos \theta = -0.2468 \).
Lesson 10.3
Level A

1. \( \sin 60^\circ = \frac{\sqrt{3}}{2} \), \( \cos 60^\circ = \frac{1}{2} \)

2. \( \sin 90^\circ = 1 \), \( \cos 90^\circ = 0 \)

3. \( \sin 120^\circ = \frac{\sqrt{3}}{2} \), \( \cos 120^\circ = -\frac{1}{2} \)

4. \( \sin (-45^\circ) = -\frac{\sqrt{2}}{2} \), \( \cos (-45^\circ) = \frac{\sqrt{2}}{2} \)

5. \( \sin 210^\circ = -\frac{1}{2} \), \( \cos 210^\circ = -\frac{\sqrt{3}}{2} \)

6. \( \sin 180^\circ = 0 \), \( \cos 180^\circ = -1 \)

7. \( \sin 60^\circ = 0.8660 \), \( \cos 60^\circ = 0.5 \)

8. \( \sin 90^\circ = 1 \), \( \cos 90^\circ = 0 \)

9. \( \sin 120^\circ = 0.8660 \), \( \cos 120^\circ = -0.5 \)

10. \( \sin(-45^\circ) = -0.7071 \), \( \cos(-45^\circ) = 0.7071 \)

11. \( \sin 210^\circ = -0.5 \), \( \cos 210^\circ = -0.8660 \)

12. \( \sin 180^\circ = 0 \), \( \cos 180^\circ = -1 \)

13. a. Quadrants I or II
    b. \( \theta = 49.7^\circ \) or \( 130.3^\circ \)

14. a. Quadrants II or III
    b. \( \theta = 104.3^\circ \) or \( 255.7^\circ \)
In Exercises 1–4, sketch a ray with given angle \( \theta \) with the positive \( x \)-axis. Label the coordinates of the point on the ray at a distance of 1 from the origin. Use these values and the unit circle definitions of sine and cosine to give the sine and cosine of each angle. Leave your answers in simplified radical form.

1. \( 150^\circ \)

   \[
   \sin 150^\circ = \quad \cos 150^\circ =
   \]

2. \( 300^\circ \)

   \[
   \sin 300^\circ = \quad \cos 300^\circ =
   \]

3. \( 270^\circ \)

   \[
   \sin 270^\circ = \quad \cos 270^\circ =
   \]

4. \( 225^\circ \)

   \[
   \sin 225^\circ = \quad \cos 225^\circ =
   \]

In Exercises 5–8, use a calculator to find the sine and cosine of each angle to four decimal places. Compare with the values you found in Exercises 1–4.

5. \( \sin 150^\circ \) \( \cos 150^\circ \) \( \sin 300^\circ \) \( \cos 300^\circ \)

6. \( \sin 270^\circ \) \( \cos 270^\circ \) \( \sin 225^\circ \) \( \cos 225^\circ \)

9. a. If \( \sin \theta \) is positive, in what quadrant(s) will the terminal ray of angle \( \theta \) be located?

   

b. Find all possible values of \( \theta \) between \( 0^\circ \) and \( 360^\circ \) such that \( \sin \theta = 0.2195 \).

10. a. If \( \cos \theta \) is negative, in what quadrant(s) will the terminal ray of angle \( \theta \) be located?

   

b. Find all possible values of \( \theta \) between \( 0^\circ \) and \( 360^\circ \) such that \( \cos \theta = -0.8530 \).

11. The second hand on a clock turns at the rate of \( 6^\circ \) per second. Assume that the length of the hand is 1 unit. Write an equation for the vertical position of point \( x \) if it starts from the horizontal position at \( t = 0 \) seconds. Recall that the clockwise direction is considered to be negative.
Lesson 10.3
Level B

1. \( P\left(-\frac{\sqrt{3}}{2}, \frac{1}{2}\right) \)
   \[
   \sin 150^\circ = \frac{1}{2}, \quad \cos 150^\circ = -\frac{\sqrt{3}}{2}
   \]

2. \( P\left(\frac{1}{2}, -\frac{\sqrt{3}}{2}\right) \)
   \[
   \sin 300^\circ = -\frac{\sqrt{3}}{2}, \quad \cos 300^\circ = \frac{1}{2}
   \]

3. \( P(0, -1) \)
   \[
   \sin 270^\circ = -1, \quad \cos 270^\circ = 0
   \]

4. \( P\left(-\frac{1}{2}, -\frac{1}{2}\right) \)
   \[
   \sin 225^\circ = -\frac{1}{\sqrt{2}} = -\frac{\sqrt{2}}{2}, \quad \cos 225^\circ = -\frac{1}{\sqrt{2}} = -\frac{\sqrt{2}}{2}
   \]

5. \( \sin 150^\circ = 0.5, \quad \cos 150^\circ = -0.8660 \)
6. \( \sin 300^\circ = -0.8660, \quad \cos 300^\circ = 0.5 \)
7. \( \sin 270^\circ = -1, \quad \cos 270^\circ = 0 \)
8. \( \sin 225^\circ = -0.7071, \quad \cos 225^\circ = -0.7071 \)
9. a. Quadrants I or II
   b. \( \theta = 12.7^\circ \) or \( 167.3^\circ \)
10. a. Quadrants II or III
    b. \( \theta = 148.5^\circ \) or \( 211.5^\circ \)
11. \( y = \sin(-6t) \)

Lesson 10.3
Level C

1. \( P\left(\frac{3}{2}, \frac{1}{2}\right) \)
   \[
   \sin 330^\circ = -\frac{1}{2}, \quad \cos 330^\circ = -\frac{\sqrt{3}}{2}
   \]

2. \( P\left(-\frac{1}{2}, -\frac{\sqrt{3}}{2}\right) \)
   \[
   \sin (-120^\circ) = -\frac{\sqrt{3}}{2}, \quad \cos (-120^\circ) = -\frac{1}{2}
   \]

In Exercises 1–4, sketch a ray with the given angle $\theta$ with the 
positive $x$-axis. Label the coordinates of the point on the ray at a 
distance of 1 from the origin. Use these values and the unit circle 
definitions of sine and cosine to give the sine and cosine of each 
angle. Leave your answers in simplified radical form.

1. $330^\circ$

2. $-120^\circ$

3. $135^\circ$

4. $90^\circ$

In Exercises 5–8, use a calculator to find the sine and cosine of 
each angle to four decimal places. Compare with the values you 
found in Exercises 1–4.

5. $\sin 330^\circ$ _______  $\cos 330^\circ$ _______

6. $\sin(-120^\circ)$ _______  $\cos(-120^\circ)$ _______

7. $\sin 135^\circ$ _______  $\cos 135^\circ$ _______

8. $\sin 90^\circ$ _______  $\cos 90^\circ$ _______

9. What would be a natural way to extend the definition of the tangent 
ratio so it would apply to angles of any size? 

10. If $\tan \theta$ is positive, in what quadrant(s) 
will the terminal ray of angle $\theta$ be 
located?

11. If $\tan \theta$ is negative, in what quadrant(s) 
will the terminal ray of angle $\theta$ be 
located?

12. Consider the identity $(\cos \theta)^2 + (\sin \theta)^2 = 1$, which was proven using 
the Pythagorean Theorem, for acute angles of a right triangle. Give 
a proof that shows it to be true for angles of any size. (Hint: Use the 
distance formula.)

Answers

3. 
\[ P(\frac{-1}{\sqrt{2}}, \frac{1}{\sqrt{2}}) \]
\[ \sin 135^\circ = \frac{1}{\sqrt{2}} = \frac{\sqrt{2}}{2} \]
\[ \cos 135^\circ = -\frac{1}{\sqrt{2}} = -\frac{\sqrt{2}}{2} \]

4. 
\[ P(0, 1) \]
\[ \sin 90^\circ = 1 \]
\[ \cos 90^\circ = 0 \]

5. \( \sin 330^\circ = -0.5 \), \( \cos 330^\circ = 0.8660 \)

6. \( \sin(-120^\circ) = -0.8660 \),
\( \cos(-120^\circ) = -0.5 \)

7. \( \sin 135^\circ = 0.7071 \), \( \cos 135^\circ = -0.7071 \)

8. \( \sin 90^\circ = 1 \), \( \cos 90^\circ = 0 \)

9. Define \( \tan \theta = \frac{y}{x} \) or \( \tan \theta = \frac{\sin \theta}{\cos \theta} \)

10. a. Quadrants I or III

11. a. Quadrants II or IV

12. \( OP = 1 = \sqrt{(\cos \theta - 0)^2 + (\sin \theta - 0)^2} \)
\[ 1^2 = 1 = (\cos \theta)^2 + (\sin \theta)^2 \]

Lesson 10.4
Level A

1. \( c = 25.7 \)

2. \( b = 20.6 \)

3. \( c = 12.2 \)

4. \( m\angle C = 60.7^\circ \)

5. \( m\angle A = 27.1^\circ \)

6. \( m\angle B = 46.6^\circ \text{ or } 133.4^\circ \)

7. \( m\angle B = 68.5^\circ \text{ or } 111.5^\circ \)

8. One triangle is possible. The given angle, \( A \), is obtuse, so there can be only one possible acute size for angle \( B \).

9. No triangles are possible. It is indicated that the smaller side, \( a \), is opposite the obtuse angle. This would be impossible.

10. One triangle is possible. The side opposite the given angle is greater than the side adjacent.

11. No triangles are possible. The side opposite the given angle is shorter than the altitude, so it is too short to reach the adjacent side.

12. \( m\angle A = 51^\circ \), \( b = 7.4 \), \( a = 6.4 \)

13. \( m\angle B = 16^\circ \), \( m\angle C = 139^\circ \), \( c = 19.6 \)

Lesson 10.4
Level B

1. \( b = 23.2 \)

2. \( b = 21.0 \)

3. \( m\angle C = 44.7^\circ \)

4. \( m\angle B = 61.3^\circ \text{ or } 118.7^\circ \)

5. \( m\angle B = 59.3^\circ \text{ or } 120.7^\circ \)

6. No triangles are possible. It is indicated that the smaller side, \( a \), is opposite the obtuse angle. This would be impossible.

7. One triangle is possible. The given angle, \( A \), is obtuse, so there can be only one (acute) size for angle \( B \).

8. Two triangles are possible. The side opposite given angle is longer than the altitude but shorter than the adjacent side, so it could hit the adjacent side twice.
In Exercises 1–5, find the indicated measures. Round your answers to the nearest tenth.

1. \( \angle A = 28^\circ, \quad \angle C = 52^\circ, \quad a = 15.3, \quad c = ? \)

2. \( \angle A = 31^\circ, \quad \angle C = 70^\circ, \quad a = 10.8, \quad b = ? \)

3. \( \angle B = 85^\circ, \quad \angle C = 67^\circ, \quad a = 6.2, \quad c = ? \)

4. \( \angle B = 98^\circ, \quad b = 14.2, \quad c = 12.5, \quad \angle C = ? \)

5. \( \angle C = 63^\circ, \quad a = 4.5, \quad c = 8.8, \quad \angle A = ? \)

In Exercises 6 and 7, the measures of \( \triangle ABC \) given are two side lengths and the angle measure opposite one side. Find the two possible values for \( \angle B \).

6. \( \angle A = 30^\circ, \quad a = 8.4, \quad b = 12.2 \quad \angle B = \quad \) or \( \quad \)

7. \( \angle C = 58^\circ, \quad b = 6.8, \quad c = 6.2 \quad \angle B = \quad \) or \( \quad \)

In Exercises 8–11, two sides of a triangle, \( a \) and \( b \), and an angle opposite one side, \( \angle A \), are given. Explain whether the given measurements determine one triangle, two possible triangles, or no triangles. It may be helpful to sketch the triangle roughly to scale.

8. \( \angle A = 105^\circ, \quad a = 18, \quad b = 14 \)

9. \( \angle A = 92^\circ, \quad a = 10.5, \quad b = 16 \)

10. \( \angle A = 48^\circ, \quad a = 8.6, \quad b = 7.2 \)

11. \( \angle A = 65^\circ, \quad a = 4.3, \quad b = 6.7 \)

In Exercises 12 and 13, solve each triangle. If the triangle is ambiguous, give both possible angles and all unknown parts of the two triangles possible. It may be helpful to sketch each triangle roughly to scale.

12. \( \angle A = 56^\circ \quad \text{Find:} \quad \angle C \quad \angle B \quad \text{Find:} \quad \angle B \)

   \( \angle B = 73^\circ \quad b \quad a = 12.6 \quad \angle C \)

   \( c = 6.0 \quad a \quad b = 8.3 \quad c \)
3. \[
P\left(\frac{-1}{\sqrt{2}}, \frac{1}{\sqrt{2}}\right)
\]
\[
\sin 90^\circ = 1, \cos 90^\circ = 0
\]
\[
\sin 135^\circ = \frac{1}{\sqrt{2}} = \frac{\sqrt{2}}{2}
\]
\[
\cos 135^\circ = \frac{-1}{\sqrt{2}} = \frac{-\sqrt{2}}{2}
\]
4. \[
P(0, 1)
\]
\[
\sin 90^\circ = 1, \cos 90^\circ = 0
\]
5. \[
\sin 330^\circ = -0.5, \cos 330^\circ = 0.8660
\]
6. \[
\sin(-120^\circ) = -0.8660, \cos(-120^\circ) = -0.5
\]
7. \[
\sin 135^\circ = 0.7071, \cos 135^\circ = -0.7071
\]
8. \[
\sin 90^\circ = 1, \cos 90^\circ = 0
\]
9. Define \(\tan \theta = \frac{y}{x}\) or \(\tan \theta = \frac{\sin \theta}{\cos \theta}\).
10. a. Quadrants I or III
11. a. Quadrants II or IV
12. \[
OP = 1 = \sqrt{(\cos \theta - 0)^2 + (\sin \theta - 0)^2}
\]
\[
1^2 = 1 = (\cos \theta)^2 + (\sin \theta)^2
\]

**Lesson 10.4**

**Level A**

1. \(c = 25.7\)
2. \(b = 20.6\)
3. \(c = 12.2\)
4. \(\angle C = 60.7^\circ\)
5. \(\angle A = 27.1^\circ\)
6. \(\angle B = 46.6^\circ \text{ or } 133.4^\circ\)
7. \(\angle B = 68.5^\circ \text{ or } 111.5^\circ\)
8. One triangle is possible. The given angle, \(A\), is obtuse, so there can be only one possible acute size for angle \(B\).
9. No triangles are possible. It is indicated that the smaller side, \(a\), is opposite the obtuse angle. This would be impossible.
10. One triangle is possible. The side opposite the given angle is greater than the side adjacent.
11. No triangles are possible. The side opposite the given angle is shorter than the altitude, so it is too short to reach the adjacent side.
12. \(\angle C = 51^\circ, b = 7.4, a = 6.4\)
13. \(\angle B = 16^\circ, \angle C = 139^\circ, c = 19.6\)

**Level B**

1. \(b = 23.2\)
2. \(b = 21.0\)
3. \(\angle C = 44.7^\circ\)
4. \(\angle B = 61.3^\circ \text{ or } 118.7^\circ\)
5. \(\angle B = 59.3^\circ \text{ or } 120.7^\circ\)
6. No triangles are possible. It is indicated that the smaller side, \(a\), is opposite the obtuse angle. This would be impossible.
7. One triangle is possible. The given angle, \(A\), is obtuse, so there can be only one (acute) size for angle \(B\).
8. Two triangles are possible. The side opposite given angle is longer than the altitude but shorter than the adjacent side, so it could hit the adjacent side twice.
In Exercises 1–3, find the indicated measures. Round your answers to the nearest tenth.

1. \( \angle A = 32^\circ, \quad \angle C = 61^\circ, \quad a = 12.3, \quad b = ? \)

2. \( \angle B = 92^\circ, \quad \angle C = 58^\circ, \quad a = 10.5, \quad b = ? \)

3. \( \angle B = 102^\circ, \quad b = 14.6^\circ, \quad c = 10.5, \quad \angle C = ? \)

In Exercises 4 and 5, the measures given are two sides and the angle opposite one side. Find the two possible values for \( \angle B \).

4. \( \angle A = 34^\circ, \quad a = 6.5, \quad b = 10.2 \) 
   \( \angle B = \underline{\phantom{0}} \) or \( \underline{\phantom{0}} \)

5. \( \angle C = 53^\circ, \quad b = 4.2, \quad c = 3.9 \) 
   \( \angle B = \underline{\phantom{0}} \) or \( \underline{\phantom{0}} \)

In Exercises 6–9, two sides of a triangle, \( a \) and \( b \), and an angle opposite one side, \( \angle A \), are given. Explain whether the given measurements determine one triangle, two possible triangles, or no triangles. It may be helpful to sketch the triangle roughly to scale.

6. \( \angle A = 110^\circ, \quad a = 12, \quad b = 14 \)

7. \( \angle A = 96^\circ, \quad a = 14.5, \quad b = 11 \)

8. \( \angle A = 62^\circ, \quad a = 6.0, \quad b = 6.4 \)

9. \( \angle A = 25^\circ, \quad a = 2.4, \quad b = 8.8 \)

In Exercises 10 and 11, solve each triangle. If the triangle is ambiguous, give both possible angles and all unknown parts of the two triangles possible. It may be helpful to sketch each triangle roughly to scale.

10. \( \angle A = 48^\circ \) 
    Find: \( \angle C \) \hfill \text{11.} \quad \angle A = 56^\circ \) 
    Find: \( \angle B \)
    \( \angle B = 65^\circ \) 
    \( b \) \hfill \text{a} = 21.8 \hfill \text{m} \angle C \)
    \( c = 8.7 \) \hfill \text{a} \hfill \text{b} = 24.0 \hfill \text{c} \)

12. Two observers on the ground view a hot-air balloon between them at angles of \( 52^\circ \) and \( 67^\circ \), respectively. The observers are \( \frac{1}{2} \) mile (2640 feet) apart. Find the distance between the balloon and the closest observer.
3. $\sin 330° = -0.5$, $\cos 330° = 0.8660$

4. $\sin 90° = 1$, $\cos 90° = 0$

5. $\sin 330° = -0.5$, $\cos 330° = 0.8660$

6. $\sin(-120°) = -0.8660$, $\cos(-120°) = -0.5$

7. $\sin 135° = 0.7071$, $\cos 135° = -0.7071$

8. $\sin 90° = 1$, $\cos 90° = 0$

9. $\tan \theta = \frac{y}{x}$ or $\tan \theta = \frac{\sin \theta}{\cos \theta}$

10. a. Quadrants I or III

11. a. Quadrants II or IV

12. $OP = 1 = \sqrt{(\cos \theta - 0)^2 + (\sin \theta - 0)^2}$

13. $\sin 135° = 0.7071$, $\cos 135° = -0.7071$

14. $\sin 90° = 1$, $\cos 90° = 0$

15. $\tan \theta = \frac{y}{x}$ or $\tan \theta = \frac{\sin \theta}{\cos \theta}$

Lesson 10.4
Level B

1. $b = 23.2$

2. $b = 21.0$

3. $m\angle C = 44.7°$

4. $m\angle B = 61.3°$ or $118.7°$

5. $m\angle B = 59.3°$ or $120.7°$

6. No triangles are possible. It is indicated that the smaller side, $a$, is opposite the obtuse angle. This would be impossible.

7. One triangle is possible. The given angle, $A$, is obtuse, so there can be only one possible acute size for angle $B$.

8. Two triangles are possible. The side opposite given angle is longer than the altitude but shorter than the adjacent side, so it could hit the adjacent side twice.
9. No triangles are possible. The side opposite the given angle is shorter than the altitude, so it is too short to reach the adjacent side.

10. \( m\angle C = 67^\circ, b = 8.6, a = 7.0 \)

11. This is the ambiguous case. Two triangles are possible, as shown:

![Triangle Diagram]

\[ m\angle AB_2C = 114.1^\circ \quad m\angle B_1 = 65.9^\circ \]
\[ m\angle ACB_2 = 9.9^\circ \quad m\angle ACB_1 = 58.1^\circ \]
\[ AB_2 = 4.5 \quad AB_1 = 22.3 \]

12. 2378.6 feet

**Lesson 10.4**

**Level C**

1. One triangle is possible. The given angles and side fit the ASA congruence condition.

2. One triangle is possible. The given information fits in SSA, the ambiguous case, but the side opposite the given angle is longer than the adjacent side, so it can only meet that side once.

3. No triangles are possible. The shorter side is opposite the obtuse angle, which is impossible.

4. Two triangles are possible. The side opposite the given angle is longer than the altitude but shorter than the adjacent side, so it could hit the adjacent side twice.

5. \( m\angle B = 65.3^\circ \) or \( 114.7^\circ \)

6. \( m\angle B = 33.9^\circ \) or \( 146.1^\circ \)

7. \( m\angle B = 83^\circ, a = 5.1, c = 4.6 \)

8. This is the ambiguous case. Two triangles are possible, as shown:

![Triangle Diagram]

\[ m\angle AB_2C = 118.7^\circ \quad m\angle B_1 = 61.3^\circ \]
\[ m\angle ACB_2 = 17.3^\circ \quad m\angle ACB_1 = 74.7^\circ \]
\[ AB_2 = 4.1 \quad AB_1 = 13.2 \]

9. Where \( \sin C = \sin 90^\circ = 1 \), the law of sines gives
\[
\frac{\sin A}{a} = \frac{1}{c} = \frac{\sin B}{b},
\]
which yields
\[
\sin A = \frac{a}{c} = \frac{\text{leg opposite } \angle A}{\text{hypotenuse}}
\]
\[
\sin B = \frac{b}{c} = \frac{\text{leg opposite } \angle B}{\text{hypotenuse}}
\]

10. 2189.5 feet

11. about 19.6 feet apart

**Lesson 10.5**

**Level A**

1. Use law of cosines because the given information is two sides and the included angle.

2. Use law of sines because the given information is two angles and a side.

3. \( a = 8.9 \)

4. \( a = 4.0 \)
In Exercises 1–4 the measures of three parts of \( \triangle ABC \) are given. Explain whether the given measurements determine one triangle, two possible triangles, or no triangles. It may be helpful to sketch the triangle roughly to scale.

1. \( \angle A = 65^\circ \), \( \angle B = 21^\circ \), \( c = 8.0 \)  
2. \( \angle A = 46^\circ \), \( a = 12.5 \), \( b = 10.2 \)  
3. \( \angle A = 96^\circ \), \( a = 8.0 \), \( b = 8.4 \)  
4. \( \angle A = 32^\circ \), \( a = 3.6 \), \( b = 4.8 \)

In Exercises 5 and 6, the measures given are two sides and the angle opposite one side. Find the two possible values for \( \angle B \).

5. \( \angle A = 54^\circ \), \( a = 7.3 \), \( b = 8.2 \)  
6. \( \angle C = 22^\circ \), \( b = 5.8 \), \( c = 3.9 \)

In Exercises 7 and 8, find all unknown sides and angles of each triangle. If the triangle is ambiguous, give both possible angles and all unknown parts of the two triangles possible. It may be helpful to sketch each triangle roughly to scale.

7. \( \angle A = 52^\circ \)  
   Find: \( \angle B \) __________  
   \( \angle C = 45^\circ \)  
   \( a = __________ \)  
   \( a = 9.5 \)  
   \( \angle C = __________ \)  
   \( b = 6.4 \)  
   \( c = __________ \)  
   \( b = 12.0 \)  
   \( c = __________ \)

9. Show that in the case of a right triangle, where \( \angle C = 90^\circ \), the law of sines reverts to the definitions of \( \sin A \) and \( \sin B \).

10. Two observers on the ground view a hot-air balloon between them at angles of \( 52^\circ \) and \( 67^\circ \), respectively. The observers are \( \frac{1}{2} \) mile (2640 feet) apart. Find the height of the balloon above the ground.

11. From his seat 10 feet above water level, a lifeguard sees two swimmers at angles of \( 12^\circ \) and \( 20^\circ \), respectively, below a horizontal line. Find the distance between the swimmers. (Hint: You may need to solve several triangles.)
9. No triangles are possible. The side opposite the given angle is shorter than the altitude, so it is too short to reach the adjacent side.

10. \( \angle C = 67^\circ, b = 8.6, a = 7.0 \)

11. This is the ambiguous case. Two triangles are possible, as shown:

![Diagram of two possible triangles]

\[
\begin{align*}
\angle AB_2C &= 114.1^\circ & \angle B_1 &= 65.9^\circ \\
\angle ACB_2 &= 9.9^\circ & \angle ACB_1 &= 58.1^\circ \\
AB_2 &= 4.5 & AB_1 &= 22.3
\end{align*}
\]

12. 2378.6 feet

**Lesson 10.4**

**Level C**

1. One triangle is possible. The given angles and side fit the ASA congruence condition.

2. One triangle is possible. The given information fits in SSA, the ambiguous case, but the side opposite the given angle is longer than the adjacent side, so it can only meet that side once.

3. No triangles are possible. The shorter side is opposite the obtuse angle, which is impossible.

4. Two triangles are possible. The side opposite the given angle is longer than the altitude but shorter than the adjacent side, so it could hit the adjacent side twice.

5. \( \angle B = 65.3^\circ \text{ or } 114.7^\circ \)

6. \( \angle B = 33.9^\circ \text{ or } 146.1^\circ \)

7. \( \angle B = 83^\circ, a = 5.1, c = 4.6 \)

8. This is the ambiguous case. Two triangles are possible, as shown:

![Diagram showing two possible triangles]

\[
\begin{align*}
\angle AB_2C &= 118.7^\circ & \angle B_1 &= 61.3^\circ \\
\angle ACB_2 &= 17.3^\circ & \angle ACB_1 &= 74.7^\circ \\
AB_2 &= 4.1 & AB_1 &= 13.2
\end{align*}
\]

9. Where \( \sin C = \sin 90^\circ = 1 \), the law of sines gives \( \frac{\sin A}{a} = \frac{1}{c} = \frac{\sin B}{b} \), which yields \( \sin A = \frac{a}{c} = \frac{\text{leg opposite } \angle A}{\text{hypotenuse}} \) and \( \sin B = \frac{b}{c} = \frac{\text{leg opposite } \angle B}{\text{hypotenuse}} \)

10. 2189.5 feet

11. about 19.6 feet apart

**Lesson 10.5**

**Level A**

1. Use law of cosines because the given information is two sides and the included angle.

2. Use law of sines because the given information is two angles and a side.

3. \( a = 8.9 \)

4. \( a = 4.0 \)
In Exercises 1 and 2, which rule should you use, the law of sines or the law of cosines, to find each indicated measurement? Explain your reasoning.

1. \[15 \quad 20 \quad 33^\circ \quad x\]

2. \[10 \quad 34^\circ \quad 92^\circ \quad x\]

In Exercises 3–6, find the indicated measures. Round your answers to the nearest tenth.

3. \(m\angle A = 35^\circ, \ b = 15.5, \ c = 12.4, \ a = ?\)

4. \(m\angle B = 94^\circ, \ m\angle A = 28^\circ, \ b = 8.5, \ a = ?\)

5. \(a = 4.1, \ b = 8.3, \ c = 7.2, \ m\angle B = ?\)

6. \(m\angle C = 65^\circ, \ m\angle A = 32^\circ, \ b = 10.8, \ c = ?\)

In Exercises 7–10, use the law of cosines and/or the law of sines to solve each triangle. Round answers to the nearest tenth.

Lesson 10.5
Level A

1. Use law of cosines because the given information is two sides and the included angle.

2. Use law of sines because the given information is two angles and a side.

3. $a = 8.9$

4. $a = 4.0$
### Answers

5. \( \angle B = 90.2^\circ \)
6. \( c = 9.9 \)
7. \( PQ = 6.9, \angle P = 52.3^\circ, \angle Q = 57.7^\circ \)
8. \( \angle X = 58^\circ, \angle Z = 27^\circ, XY = 7.7 \)
9. \( \angle M = 120^\circ, \angle L = 27.8^\circ, \angle H = 32.2^\circ \)
10. \( HJ = 3.0, \angle J = 51.9^\circ, \angle H = 93.1^\circ \)

#### Lesson 10.5

**Level B**

1. Use the law of sines because the given information is two angles and a side.
2. Use the law of cosines because the given information is two sides and the included angle.
3. \( c = 8.1 \)
4. \( c = 22.4 \)
5. \( \angle C = 48.6^\circ \)
6. \( MN = 8.1, \angle N = 20.5^\circ, \angle M = 135.5^\circ \)
7. \( \angle X = 60.4^\circ, \angle Y = 27.6^\circ, XZ = 5.0 \)
8. \( \angle P = 80.2^\circ, \angle Q = 50.3^\circ, \angle R = 49.5^\circ \)
9. \( \angle H = 92^\circ, HK = 4.9, HJ = 11.4 \)
10. 151.4 miles apart

#### Lesson 10.5

**Level C**

1. Use the law of cosines because three sides are given.
2. Use the law of sines because the given information is two angles and a side.
3. \( \angle C = 54.4^\circ \)
4. \( c = 14.9 \)
5. \( \angle B = 98.5^\circ \)

### Lesson 10.6

**Level A**

1. \[ \vec{a} + \vec{b} \]
2. \[ \vec{a} + \vec{b} \]
3. \[ \vec{a} + \vec{b} \]

4. a. It seems that \( \vec{a} + \vec{b} = \vec{b} + \vec{a} \).
   
   b. Commutative property of vector addition

5. \[ \vec{a} + \vec{b} \]

6. \[ \vec{a} + \vec{b} \]

7. a. \( \|\vec{r}\| = \sqrt{29} \approx 5.385 \)
   
   b. 21.8°
In Exercises 1 and 2, which rule should you use, the law of sines or the law of cosines, to find each indicated measurement? Explain your reasoning.

\[ \text{1.} \]
\[ \text{2.} \]

In Exercises 3–5, find the indicated measures. Round your answers to the nearest tenth.

\[ \text{3. } m\angle C = 52^\circ, \quad b = 10.3, \quad a = 6.1, \quad c = ? \]
\[ \text{4. } m\angle C = 68^\circ, \quad m\angle A = 28^\circ, \quad b = 24, \quad c = ? \]
\[ \text{5. } a = 3.2, \quad b = 6.5 \quad c = 5.0, \quad m\angle C = ? \]

In Exercises 6–9, use the law of cosines and/or the law of sines to solve each triangle. Round answers to the nearest tenth.

\[ \text{6.} \]
\[ \text{7.} \]
\[ \text{8.} \]
\[ \text{9.} \]

10. Two trains depart from the same station on tracks that form a 65° angle. Train A leaves at noon and travels at an average speed of 52 miles per hour. Train B leaves at 1 P.M. and travels at an average speed of 60 miles per hour. How far apart are the trains at 3 P.M.?
5. $m \angle B = 90.2^\circ$
6. $c = 9.9$
7. $PQ = 6.9$, $m \angle P = 52.3^\circ$, $m \angle Q = 57.7^\circ$
8. $m \angle X = 58^\circ$, $m \angle Z = 27^\circ$, $XY = 7.7$
9. $m \angle M = 120^\circ$, $m \angle L = 27.8^\circ$, $m \angle H = 32.2^\circ$
10. $HJ = 3.0$, $m \angle J = 51.9^\circ$, $m \angle H = 93.1^\circ$

**Lesson 10.5**

**Level B**

1. Use the law of sines because the given information is two angles and a side.
2. Use the law of cosines because the given information is two sides and the included angle.
3. $c = 8.1$
4. $c = 22.4$
5. $m \angle C = 48.6^\circ$
6. $MN = 8.1$, $m \angle N = 20.5^\circ$, $m \angle M = 135.5^\circ$
7. $m \angle X = 60.4^\circ$, $m \angle Y = 27.6^\circ$, $XZ = 5.0$
8. $m \angle P = 80.2^\circ$, $m \angle Q = 50.3^\circ$, $m \angle R = 49.5^\circ$
9. $m \angle H = 92^\circ$, $HK = 4.9$, $HJ = 11.4$
10. 151.4 miles apart

**Lesson 10.5**

**Level C**

1. Use the law of cosines because three sides are given.
2. Use the law of sines because the given information is two angles and a side.
3. $m \angle C = 54.4^\circ$
4. $c = 14.9$
5. $m \angle B = 98.5^\circ$
In Exercises 1 and 2, which rule should you use, the law of sines or the law of cosines, to find each indicated measurement? Explain your reasoning.

1. [Diagram with sides 5.2, 5.1, and 8.6]
2. [Diagram with sides 6, 6.5, and angle 30°]

In Exercises 3–5, find the indicated measures. Round your answers to the nearest tenth.

3. \( \angle B = 86°, \quad b = 10.3, \quad c = 8.4, \quad \angle C = ? \)
4. \( \angle C = 64°, \quad a = 8.7, \quad b = 16.5, \quad \angle C = ? \)
5. \( a = 3.0, \quad b = 6.2, \quad c = 5.0, \quad \angle B = ? \)

In Exercises 6–9, use the law of cosines and/or the law of sines to solve each triangle. Round answers to the nearest tenth.

6. [Diagram]
7. [Diagram]
8. [Diagram]
9. [Diagram]

10. The vertices of \( \triangle ABC \) are located on a coordinate plane at \( A(2, -3), B(6, 0) \) and \( C(-1, 4) \).

   a. Use the distance formula to find the lengths of the sides.
      \( AB \) ____________, \( BC \) ____________, \( CA \) ____________

   b. Use the law of cosines to find the measures of the angles.
      \( \angle A \) ____________, \( \angle B \) ____________, \( \angle C \) ____________
5. $m\angle B = 90.2^\circ$
6. $c = 9.9$
7. $PQ = 6.9$, $m\angle P = 52.3^\circ$, $m\angle Q = 57.7^\circ$
8. $m\angle X = 58^\circ$, $m\angle Z = 27^\circ$, $XY = 7.7$
9. $m\angle M = 120^\circ$, $m\angle L = 27.8^\circ$, $m\angle H = 32.2^\circ$
10. $HJ = 3.0$, $m\angle J = 51.9^\circ$, $m\angle H = 93.1^\circ$

Lesson 10.5
Level B

1. Use the law of sines because the given information is two angles and a side.
2. Use the law of cosines because the given information is two sides and the included angle.
3. $c = 8.1$
4. $c = 22.4$
5. $m\angle C = 48.6^\circ$
6. $MN = 8.1$, $m\angle N = 20.5^\circ$, $m\angle M = 135.5^\circ$
7. $m\angle X = 60.4^\circ$, $m\angle Y = 27.6^\circ$, $XZ = 5.0$
8. $m\angle P = 80.2^\circ$, $m\angle Q = 50.3^\circ$, $m\angle R = 49.5^\circ$
9. $m\angle H = 92^\circ$, $HK = 4.9$, $HJ = 11.4$
10. 151.4 miles apart

Lesson 10.5
Level C

1. Use the law of cosines because three sides are given.
2. Use the law of sines because the given information is two angles and a side.
3. $m\angle C = 54.4^\circ$
4. $c = 14.9$
5. $m\angle B = 98.5^\circ$

Lesson 10.6
Level A

1. \[ \vec{a} + \vec{b} \]
2. \[ \vec{a} + \vec{b} \]
3. \[ \vec{a} + \vec{b} \]
4. a. It seems that $\vec{a} + \vec{b} = \vec{b} + \vec{a}$.
   b. Commutative property of vector addition
5. \[ \vec{a} + \vec{b} \]
6. \[ \vec{a} + \vec{b} \]
7. a. \[ \vec{a}, \vec{b}, \vec{c} \] with $\theta = 135^\circ$
   b. $|\vec{s}| = \sqrt{29} \approx 5.385$
   c. 21.8°
10.6 Vectors in Geometry

In Exercises 1–3, draw both sum vectors, $\vec{a} + \vec{b}$ and $\vec{b} + \vec{a}$, by using the head-to-tail method.

1. 
   \[ \vec{a} + \vec{b} \quad \vec{b} + \vec{a} \]

2. 

3. 

4. a. From your results in Exercises 1–3, what seems to be the relationship between $\vec{a} + \vec{b}$ and $\vec{b} + \vec{a}$?
   
   b. By what name (from algebra) might you call this property of vector addition?

In Exercises 5 and 6, draw the vector sum $\vec{a} + \vec{b}$ by using the parallelogram method. You may need to translate the vectors.

5. 

6. 

7. Vectors $\vec{p}$ and $\vec{q}$ are given at the right.
   
   $|\vec{p}| = \sqrt{8}$; $|\vec{q}| = 3$

   a. Draw their sum vector, $\vec{s}$, by using the parallelogram method.

   b. Use the law of cosines to find $|\vec{s}|$, the magnitude of $\vec{s}$.

   c. Use the law of sines to find the angle that $\vec{s}$ makes with $\vec{q}$.
Answers

5. \( m\angle B = 90.2^\circ \)
6. \( c = 9.9 \)
7. \( PQ = 6.9, m\angle P = 52.3^\circ, m\angle Q = 57.7^\circ \)
8. \( m\angle X = 58^\circ, m\angle Z = 27^\circ, XY = 7.7 \)
9. \( m\angle M = 120^\circ, m\angle L = 27.8^\circ, m\angle H = 32.2^\circ \)
10. \( HJ = 3.0, m\angle J = 51.9^\circ, m\angle H = 93.1^\circ \)

Lesson 10.5
Level B

1. Use the law of sines because the given information is two angles and a side.
2. Use the law of cosines because the given information is two sides and the included angle.
3. \( c = 8.1 \)
4. \( c = 22.4 \)
5. \( m\angle C = 48.6^\circ \)
6. \( MN = 8.1, m\angle N = 20.5^\circ, m\angle M = 135.5^\circ \)
7. \( m\angle X = 60.4^\circ, m\angle Y = 27.6^\circ, XZ = 5.0 \)
8. \( m\angle P = 80.2^\circ, m\angle Q = 50.3^\circ, m\angle R = 49.5^\circ \)
9. \( m\angle H = 92^\circ, HK = 4.9, HJ = 11.4 \)
10. 151.4 miles apart

Lesson 10.5
Level C

1. Use the law of cosines because three sides are given.
2. Use the law of sines because the given information is two angles and a side.
3. \( m\angle C = 54.4^\circ \)
4. \( c = 14.9 \)
5. \( m\angle B = 98.5^\circ \)
6. \( ML = 3.8, m\angle L = 20.1^\circ, m\angle M = 67.9^\circ \)
7. \( m\angle X = 138^\circ, XZ = 5.0, XY = 4.6 \)
8. \( m\angle P = 99.1^\circ, m\angle Q = 41.0^\circ, m\angle R = 39.9^\circ \)
9. \( m\angle K = 54.2^\circ, m\angle J = 32.8^\circ, HK = 3.5 \)
10. \( AB = 5, BC = 8.1, CA = 7.6 \\
m\angle A = 77^\circ, m\angle B = 66^\circ, m\angle C = 37^\circ \)

Lesson 10.6
Level A

1. \( \vec{a} + \vec{b} + \vec{a} \)
2. \( \vec{a} + \vec{a} + \vec{b} \)
3. \( \vec{a} + \vec{b} + \vec{a} \)
4. a. It seems that \( \vec{a} + \vec{b} = \vec{b} + \vec{a} \).
   b. Commutative property of vector addition
5. \( \vec{a} + \vec{b} + \vec{a} \)
6. \( \vec{a} + \vec{b} + \vec{a} \)
7. a. \( |\vec{s}| = \sqrt{29} \approx 5.385 \)
   b. \( 21.8^\circ \)
The opposite of vector \( \vec{b} \), denoted by \(-\vec{b}\), is the vector with the same magnitude as \( \vec{b} \), but the opposite direction. Vector subtraction is defined in terms of addition as \( \vec{a} - \vec{b} = \vec{a} + (-\vec{b}) \).

In Exercises 1–3, draw difference vectors, \( \vec{a} - \vec{b} \) and \( \vec{b} - \vec{a} \), by using the head-to-tail method.

1. \[ \vec{a} - \vec{b} \quad \vec{b} - \vec{a} \]

2. \[ \vec{a} \quad \vec{b} \]

3. \[ \vec{a} \quad \vec{b} \]

4. From your results in Exercises 1–3, what seems to be the relationship between \( \vec{a} - \vec{b} \) and \( \vec{b} - \vec{a} \)?

In Exercises 5 and 6, draw the vector sum \( \vec{a} + \vec{b} \) by using the parallelogram method. You may need to translate the vectors.

5. \[ \vec{a} \quad \vec{b} \]

6. \[ \vec{a} \quad \vec{b} \]

7. Vectors \( \vec{p} \) and \( \vec{q} \) are given at the right.

\[ |\vec{p}| = \sqrt{8}; \ |\vec{q}| = 5 \]

a. Draw their sum vector, \( \vec{s} \), using the parallelogram method.

b. Use the law of cosines to find \( |\vec{s}| \), the magnitude of \( \vec{s} \). ________________

c. Use the law of sines to find the angle that \( \vec{s} \) makes with \( \vec{q} \). ________________
Lesson 10.6
Level B

1. \( \vec{a} - \vec{b} \) \( \vec{b} - \vec{a} \)

2. \( \vec{a} \) \( \vec{b} \)

3. \( -\vec{b} \) \( \vec{a} - \vec{b} \) \( \vec{b} - \vec{a} \)

4. That they are opposite vectors

5. \( \vec{a} + \vec{b} \)

6. \( \vec{a} \) \( \vec{b} \) \( \vec{a} + \vec{b} \)

7. \( \vec{p} + \vec{q} = \vec{s} \)

Lesson 10.7
Level A

1. \( P' (2, 2\sqrt{3}) \)

Lesson 10.6
Level C

1. \( 2\vec{a} \) \( 2\vec{a} + \vec{b} \) \( \vec{a} + \vec{b} \) \( 2(\vec{a} + \vec{b}) \)
Multiplication of a vector by a scalar (number) can be thought of in terms of repeated addition. Thus, for this vector \( \vec{a}, 3\vec{a} = \vec{a} + \vec{a} + \vec{a} \).

In Exercises 1–3, use the head-to-tail method to draw all indicated vectors.

1. \[ 2\vec{a} + 2\vec{b}, \quad \vec{a} + \vec{b}, \quad 2(\vec{a} + \vec{b}) \]

2. 

3.

4. a. From your results in Exercises 1–3, what seems to be the relationship between \( 2\vec{a} + 2\vec{b} \) and \( 2(\vec{a} + \vec{b}) \)?

b. By what name (from algebra) might you call this property of scalar multiplication over vector addition?

5. Vectors \( \vec{p} \) and \( \vec{q} \) are given at the right.

\[ |\vec{p}| = \sqrt{8}; \quad |\vec{q}| = \sqrt{18} \]

a. Draw their sum vector, \( \vec{s} \), using the parallelogram method.

b. Use the law of cosines to find \( |\vec{s}| \), the magnitude of \( \vec{s} \).

c. Use the law of sines to find the angle that \( \vec{s} \) makes with \( \vec{q} \).

6. A swimmer heads in a downstream direction at an angle of 20° with the direction of a 1.5 miles per hour current. The speed of the swimmer in still water is 2.2 miles per hour. Find the following:

a. the swimmer’s actual speed

b. the swimmer’s direction angle, \( \theta \), with respect to the direction of the current
Lesson 10.6
Level B
1. \( \vec{a} - \vec{b} \)  \( \vec{a} + \vec{b} \)
2. \( \vec{-b} \)  \( \vec{b} \)
3. \( \vec{a} - \vec{b} \)  \( \vec{a} + \vec{b} \)
4. that they are opposite vectors
5. \( \vec{a} + \vec{b} \)
6. \( \vec{a} + \vec{b} \)
7. \( \vec{a} + \vec{a} = \vec{s} \)

Lesson 10.6
Level C
1. \( 2\vec{a} \)  \( 2\vec{a} + 2\vec{b} \)  \( \vec{a} + \vec{b} \)  \( 2(\vec{a} + \vec{b}) \)
2. \( 2\vec{b} \)  \( 2\vec{a} + 2\vec{b} \)  \( \vec{a} + \vec{b} \)  \( 2(\vec{a} + \vec{b}) \)
3. \( 2\vec{a} + 2\vec{b} \)  \( 2\vec{a} \)  \( 2\vec{b} \)  \( \vec{a} + \vec{b} \)  \( \vec{b} \)

4. a. They seem to be the same vector.
   b. Distributive property
5. a. \( |\vec{s}| = \sqrt{26} \approx 5.1 \)
   b. \( 33.7^\circ \)
6. a. about 3.6 mph
   b. about 11.9°

Lesson 10.7
Level A
1. a. \( P' (2, 2\sqrt{3} ) \)
   b. \( x' = 2, y' \approx 3.5 \approx 2\sqrt{3} \)
In Exercises 1–4, a point, \( P \), and an angle of rotation are given. Determine the coordinates of the image point \( P' \) in the following two ways. Round your answers to the nearest tenth. Show that you get equivalent answers by either method.

a. by drawing and using your knowledge of \( 30\text{–}60\text{–}90 \) or \( 45\text{–}45\text{–}90 \) triangles

b. by using the transformation equations

1. \( P(4, 0); \theta = 60^\circ \)
   
   a. 
   
   b. 

2. \( P(6, 6); \theta = 45^\circ \)
   
   a. 
   
   b. 

3. \( P(0, -2); \theta = 210^\circ \)
   
   a. 
   
   b. 

4. \( P(-3, 3); \theta = 90^\circ \)
   
   a. 
   
   b. 

For Exercises 5 and 6, use the transformation equations to find the coordinates of the image point under rotation through the given angle. Round your answer to the nearest tenth.

5. \( P(3, -4); \theta = 106^\circ \)

6. \( P(-1, -4); \theta = -15^\circ \)

For Exercises 7 and 8:

a. Find the rotation matrix for each angle of rotation, and

b. apply the rotation matrix to the vertices of \( \triangle ABC \) to find its image under the rotation through angle \( \theta \).

Use these vertices for \( \triangle ABC \): \( A(5, 0) \), \( B(0, 5) \), \( C(-1, 2) \). Round your answers to the nearest tenth.

7. \( \theta = 30^\circ \)
   
   a. matrix 
   
   b. \( A' \), \( B' \), \( C' \)

8. \( \theta = 125^\circ \)
   
   a. matrix 
   
   b. \( A' \), \( B' \), \( C' \)
Lesson 10.6
Level B

1. \[ \vec{a} - \vec{b} \]

2. \[ \vec{b} - \vec{a} \]

3. \[ \vec{a} - \vec{b} \]

4. \[ \vec{b} - \vec{a} \]

5. \[ \text{They seem to be the same vector.} \]

6. \[ \text{Distributive property} \]

7. \[ 33.7^\circ \]

Lesson 10.6
Level C

1. \[ \text{about 3.6 mph} \]

2. \[ \text{about 11.9}^\circ \]

Lesson 10.7
Level A

1. \[ P'(2, 2\sqrt{3}) \]

2. \[ x' = 2, y' = 3.5 \approx 2\sqrt{3} \]

3. \[ P(4, 0) \]
2. a. \( P' = (0, 6\sqrt{2}) \)
b. \( x' = 0, y' \approx 8.5 \approx 6\sqrt{2} \)

3. a. \( P' = (-1, \sqrt{3}) \)
b. \( x' = -1, y' \approx 1.7 \approx \sqrt{3} \)

4. a. \( P' = (-3, -3) \)
b. \( x' = -3, y' = -3 \)

5. \( x' = 3.0, y' = 4.0 \)
6. \( x' = -2.0, y' = -3.6 \)

7. a. \[
\begin{bmatrix}
0.8660 & -0.5 \\
0.5 & 0.8660
\end{bmatrix}
\]
b. \( A'(4.3, 2.5), B'(-2.5, 4.3), C'(-1.9, 1.2) \)

8. a. \[
\begin{bmatrix}
-0.5736 & -0.8192 \\
0.8192 & -0.5736
\end{bmatrix}
\]
b. \( A'(-2.9, 4.1), B'(-4.1, -2.9), \\
C'(-1.1, -2.0) \)

Lesson 10.7
Level B

1. a. \( P' (\sqrt{3} - 1) \)
In Exercises 1–4, a point, \( P \), and an angle of rotation are given. Determine the coordinates of the image point \( P' \) in the following two ways. Round your answers to the nearest tenth. Show that you get equivalent answers by either method.

a. by drawing and using your knowledge of 30–60–90 or 45–45–90 triangles
b. by using the transformation equations

1. \( P(-2, 0); \theta = 150° \)
   
   a. 
   
   b. 

2. \( P(3, -3); \theta = 135° \)
   
   a. 
   
   b. 

3. \( P(0, 4); \theta = -120° \)
   
   a. 
   
   b. 

4. \( P(5, 5); \theta = 90° \)
   
   a. 
   
   b. 

For Exercises 5 and 6, use the transformation equations to find the coordinates of the image point under rotation through the given angle. Round your answer to the nearest tenth.

5. \( P(-4, 3); \theta = 74° \)
   
   ________________________________

6. \( P(-2, -5); \theta = -98° \)
   
   ________________________________

For Exercises 7 and 8:

a. Find the rotation matrix for each angle of rotation, and

b. apply the rotation matrix to the vertices of \( \triangle ABC \) to find its image under the rotation through angle \( \theta \).

Use these vertices for \( \triangle ABC: A(-2, 0), B(3, 5), C(4, 2) \). Round your answer to the nearest tenth.

7. \( \theta = 120° \)
   
   a. matrix 
   
   b. \( A' \), \( B' \), \( C' \)

8. \( \theta = -50° \)
   
   a. matrix 
   
   b. \( A' \), \( B' \), \( C' \)

Answers

2. a. \( P' = (0, 6\sqrt{2}) \)
   b. \( x' = 0, y' \approx 8.5 \approx 6\sqrt{2} \)

3. a. \( P' = (-1, \sqrt{3}) \)
   b. \( x' = -1, y' \approx 1.7 \approx \sqrt{3} \)

4. a. \( P' = (-3, -3) \)
   b. \( x' = -3, y' = -3 \)

**10.7 Rotations in the Coordinate Plane**

In Exercises 1–4, a point, \( P \), and an angle of rotation are given. Determine the coordinates of the image point \( P' \) in the following two ways. Round your answers to the nearest tenth. Show that you get equivalent answers by either method.

a. by drawing and using your knowledge of 30–60–90 or 45–45–90 triangles
b. by using the transformation equations

1. \( P(-7, -7); \theta = -90^\circ \)
   - a. ________________
   - b. ________________

2. \( P(0, 6); \theta = 210^\circ \)
   - a. ________________
   - b. ________________

3. \( P(5, -5); \theta = -225^\circ \)
   - a. ________________
   - b. ________________

4. \( P(-4, 0); \theta = 240^\circ \)
   - a. ________________
   - b. ________________

For Exercises 5 and 6, use the transformation equations to find the coordinates of the image point under rotation through the given angle. Round your answer to the nearest tenth.

5. \( P(-3, 2); \theta = 100^\circ \) ________________
6. \( P(5, -1); \theta = 380^\circ \) ________________

7. An animator wants to simulate the waving of a triangular pennant on a computer screen. In its initial position, the pennant will appear attached to a pole along the line \( y = 2x \) at the points \((2, 4)\) and \((3, 6)\). The third vertex is at \((0.5, 6)\).
   a. Find the coordinates of the vertices of the triangle under a \( 30^\circ \) rotation.
   - ________________
   b. Draw the pennant in both its initial and final positions and verify by measurement that the pole is rotated through \( 30^\circ \).
     - ________________
3. a. \( P' (2\sqrt{3}, -2) \)

   ![Diagram of point P']

   b. \( x' \approx 3.464 \approx 2\sqrt{3}, y' = -2 \)

4. a. \( P'(-5, 5) \)

7. a. \[
\begin{bmatrix}
-0.5 & -0.866 \\
0.866 & -0.5
\end{bmatrix}
\]

   b. \( A'(1, -1.7), B'(-5.8, 0.1), C'(-3.7, 2.5) \)

8. a. \[
\begin{bmatrix}
0.6428 & 0.7660 \\
-0.7660 & 0.6428
\end{bmatrix}
\]

   b. \( A'(-1.3, 1.5), B'(5.8, 0.9), C'(4.1, -1.8) \)

   ![Diagram of points A', B', C']

   b. \( x' = 0, y' \approx 7.071 \approx 5 \)

---

**Lesson 10.7**

**Level C**

1. a. \( P'(-7, 7) \)

   ![Diagram of point P']

   b. \( x' = -7, y' = 7 \)

2. a. \( P'(3, -3\sqrt{3}) \)

   ![Diagram of point P']

   b. \( x' = 3, y' \approx -5.196 \approx -3\sqrt{3} \)

3. a. \( P'(0, 5\sqrt{2}) \)

   ![Diagram of point P']

   b. \( x' = 0, y' \approx 7.071 \approx 5 \)
4. a. $P'(2, 2)$

![Diagram showing point P and its image P']

b. $x' = 2, y' \approx 3.464 \approx 2\sqrt{3}$

5. $x' = -1.4, y' = -3.3$

6. $x' = 5.0, y' = 0.8$

7. a. $(-0.3, 4.5), (-0.4, 6.7), (-2.6, 5.4)$

b. On a carefully drawn figure, measure the angle between the two positions of the pole. The angle between the initial and final positions should show a $30^\circ$ counterclockwise rotation.
Determine the indicated side length(s) of each golden rectangle. Round your answers to the nearest hundredth.

1.

2.

3.

4.

5.

6.

Solve. Round your answers to the nearest hundredth.

7. One side of a golden rectangle is 1. Determine the two possible lengths for the other side.

8. One side of a golden rectangle is \( \sqrt{5} \). Determine the two possible lengths for the other side.

9. infinite number
10. yes
11. 24
Find the taxidistance between each pair of points.

1. (4, 11) and (6, 8)

2. (−2, 12) and (8, −14)

3. (7, −5) and (−1, 1)

4. (−12, 8) and (8, −12)

5. (2, 0) and (−6, −6)

6. (10, 8) and (4, 2)

For Exercises 7–10, use the points (2, 3) and (4, 6).

7. Using different colored pencils, show the different ways to move the minimum distance from one point to the other.

8. What is the taxidistance? ______________

9. How many different pathways are possible?

10. Are there any pathways that are longer or shorter than the taxidistance?

In Exercises 11 and 12, label the grid, plot the taxicab circle described onto the grid, and find its circumference.

11. center C at (3, 1); radius of 3 units

12. center O at (−4, −2); radius of 8 units

Determine whether the graphs below contain an Euler path, an Euler circuit, or neither. Decide if you can trace the entire figure without lifting your pencil. If so, tell where you would have to start for it to work.

3. Create an Euler path that has 12 edges and is not an Euler circuit.

This figure shows distances in kilometers between pairs of 5 cities. A route between cities \(A\), \(B\), and \(C\) can be described as \(ABC\). Use this information and the figure to answer the questions.

4. The shortest direct route distance between any two cities is ____________________.

5. The longest direct route between any two cities is ____________________.

6. What is the shortest segment that you can remove to cause the figure to have an Euler path? ____________________

7. What is the longest segment that you can remove to cause the figure to have an Euler path? ____________________

8. What is the least number of segments you can remove to cause the figure to have an Euler circuit? Consider \(AC\) as the two segments \(AE\) and \(EC\). ____________________

9. Describe the shortest route from \(A\) to \(C\). ____________________

Practice Masters Level A

11.5 Euclid Unparalleled

For Exercises 1–6, refer to the figure that shows \( \overrightarrow{AB} \) and point \( C \) on the surface of Poincare’s model of hyperbolic geometry.

1. Describe a line in Poincare’s model. Is it infinite or measurable? ________________________________

2. How can you draw another Poincare segment, \( \overline{CD} \), through point \( C \) that is congruent to \( \overline{AB} \)?

3. What is the least number of lines needed to form a polygon?

4. What is the least number of lines needed to form a quadrilateral? ________________

5. Explain how you could create a parallelogram whose opposite sides are both parallel and congruent. ________________________________

6. Does a parallelogram whose opposite sides are parallel necessarily have equal opposite sides? ________________________________

For Exercises 7–11, refer to the figure that shows line \( l \) on the surface of a sphere, Riemann’s model of spherical geometry.

7. Describe a line in Riemann’s model. Is it infinite or measurable? ________________________________

8. What is the least number of sides of a polygon in the Riemann’s model? ________________________________

9. What is the greatest sum of the angles of a triangle in the Riemann model? ________________________________

10. Do all Riemann quadrilaterals have the same interior angle sum? ________________

11. The diameter of a great circle of a sphere is 18 centimeters. What is the radius of the sphere? ________________________________

Lesson 11.5
Level B
1. \(AB < CD\); The points \(C\) and \(D\) are farther apart from each other than points \(A\) and \(B\).
2. the center
3. the edge
4. no
5. Construct tangents to points \(B\) and \(C\).
6. \(179^\circ\)
7. each other
8. each other
9. \(181^\circ\)
10. \(361^\circ\)
11. parallel lines

Lesson 11.5
Level C
1. no
2. 13.91 cm
3. 21.19 in.
4. 38.64 centimeters; 39.08 centimeters
5. no
6. infinitely many
7. any point except \(N\) or \(S\)
8. no
9. no
For Exercises 1–6, refer to the figure that shows $\overrightarrow{AB}$ and $\overrightarrow{CD}$ on the surface of Poincare’s model of hyperbolic geometry.

1. Compare $\overrightarrow{AB}$ and $\overrightarrow{CD}$. How can you verify that this is true? 

2. The closer the vertices of a polygon are to ___________ of Poincare’s model, the more it resembles a Euclidean polygon.

3. The closer the vertices of a polygon are to ___________ of Poincare’s model, the less it resembles a Euclidean polygon.

4. Is a straight line possible in Poincare’s model? _________________

5. What would be the first step in drawing $\overrightarrow{BC}$? _________________

6. What is the maximum whole-number sum of the angles of a triangle in Poincare’s model? _________________

For Exercises 7–8, refer to the figure that shows line $l$ on the surface of a sphere, Riemann’s model of spherical geometry.

7. In Riemann’s model, the closer the vertices of a polygon are to ___________, the more it resembles a Euclidean polygon.

8. In Riemann’s model, the farther away the vertices of a polygon are from ___________, the less it resembles a Euclidean polygon.

9. What is the least whole-number sum of the angles of a triangle in the Riemann model? _________________

10. What is the least whole-number sum of the angles of a quadrilateral in the Riemann model? _________________

11. There can be no parallelograms in a Riemann model because ___________ do not exist in the Riemann model.
6. outside
7. inside
8. \(12 - 18 + 8 = 2\)
9. \(5 - 8 + 5 = 2\)

Lessons 11.4
Level C

1. 7
2. 1
3. \(B, C\)
4. none
5. \(R\)
6. \(C, J, L, M, N, U, V, W, Z\)
7. \(D\)
8. \(E, T, Y\)
9. \(H, K\)
10. \(A\) inside, \(B\) inside, \(C\) outside

Lessons 11.5
Level A

1. arc; measurable
2. Position \(D\) the same distance from \(C\) as \(A\) is from \(B\).
3. 2
4. 4
5. Center the figure in the circle by creating arcs exactly opposite one another.
6. no
7. great circle; measurable
8. 2
9. \(270^\circ\)

Lessons 11.5
Level B

1. \(AB < CD\); The points \(C\) and \(D\) are farther apart from each other than points \(A\) and \(B\).
2. the center
3. the edge
4. no
5. Construct tangents to points \(B\) and \(C\).
6. \(179^\circ\)
7. each other
8. each other
9. \(181^\circ\)
10. \(361^\circ\)
11. parallel lines

Lessons 11.5
Level C

1. no
2. 13.91 cm
3. 21.19 in.
4. 38.64 centimeters; 39.08 centimeters
5. no
6. infinitely many
7. any point except \(N\) or \(S\)
8. no
9. no
For Exercises 1–5, refer to the figure that shows $\overrightarrow{AB}$ on the surface of Poincaré’s model of hyperbolic geometry. Write answers to the nearest hundredth, if necessary.

1. Can the center of any arc that is a Poincaré line lie inside the Poincaré plane?

2. The radius of a circle is 10 centimeters. Points $A$ and $B$ are infinitely close to the edge of Poincaré’s plane. Euclidean $AB = 12$ centimeters. Find Poincaré $AB$.

3. The radius of a circle is 12 inches. Points $A$ and $B$ are infinitely close to the edge of Poincaré’s plane. Euclidean $AB = 20$ inches. Find Poincaré $AB$.

4. The radius of a circle is 20 centimeters and $\theta = 75^\circ$. Find Euclidean $AB$. Find Poincaré $AB$.

5. Suppose you want Poincaréan line $CD$ to intersect Poincaréan line $AB$, with points $C$ and $D$ infinitely close to the edge of the plane. Can both points $C$ and $D$ be on the major arc of $AB$?

For Exercises 6–9, refer to the figure showing Riemann’s model. One great circle exists at its “Equator.” Another great circle is perpendicular to it. Point $N$ is at the “North Pole.” Point $S$ is at the “South Pole.”

6. Points $S$ and $N$ are as far from the Equator as possible. How many Riemannian lines can pass through both $S$ and $N$?

7. Describe the location of a point that has exactly one line passing through it perpendicular to the equator.

8. Is it true in Riemann’s model that two lines perpendicular to the same line is parallel to that line?

9. Does the exterior angle theorem hold for a triangle in Riemann’s model?
### Answers

6. outside

7. inside

8. \[12 - 18 + 8 = 2\]

9. \[5 - 8 + 5 = 2\]

2. the center

3. the edge

4. no

5. Construct tangents to points B and C.

6. 179°

7. each other

8. each other

9. 181°

10. 361°

11. parallel lines
Here are the first two levels in the construction of a fractal.

Level 0: __________________________________________________________________________

Level 1: Divide the segment into fourths. 
Bend the middle 2 fourths up to create 
the sides of a box. Add a top that is the 
same length as the other fourth. __________________________________________________________________________

1. In the space provided, complete two more levels of the fractal.

Level 2: __________________________________________________________________________

Level 3: __________________________________________________________________________

2. What do you notice is happening? __________________________________________________________________________

3. Write a description of the steps to follow to get from Level 1 to Level 2.

Level 1 Level 2
Lesson 11.6
Level A
1. Each side is divided into fourths.

2. Each shaded square is divided into nine congruent squares. All the squares remain shaded except for the middle square, it is white.

Lesson 11.6
Level B
1. It is the Sierpinski gasket.
2. yes
3. 6
4. Sierpinski gasket
5. 4
6. row 9; 8 units
7. row 9; 6 units
8. It would disappear.

Lesson 11.6
Level C
1. 600 centimeters$^2$; 1,000 centimeters$^3$
2. 5400 centimeters$^2$; 27,000 centimeters$^3$
3. increases
4. greater; less
5. 672 centimeters$^2$; 960 centimeters$^3$
6. two rectangular prisms; dimensions are 2 by 2 by 4 centimeters.
7. 712 centimeters$^2$; 928 centimeters$^3$
8. 768 centimeters$^2$; 896 centimeters$^3$
9. decreases
10. no

Lesson 11.7
Level A
1. \[ \overrightarrow{PE} \text{ and } \overrightarrow{PD} \]

2. \[ M \]

3. \[ K \]

4. \[ \overrightarrow{QA}, \overrightarrow{QB}, \overrightarrow{QC} \]

5. \[ M \]

6. \[ L \]
Refer to Pascal’s triangle for Exercises 1–8.

1
1 1
1 2 1
1 3 3 1
1 4 6 4 1
1 5 10 10 5 1
1 6 15 20 15 6 1
1 7 21 35 35 21 7 1
1 8 28 56 70 56 28 8 1
1 9 36 84 126 126 84 36 9 1
1 10 45 120 210 252 210 120 45 10 1

Use a pencil with an eraser to help answer Exercises 1–3.

1. Circle all even numbers in Pascal’s triangle. Describe the results.

2. Now, place an X on all numbers divisible by 3 in Pascal’s triangle. Is the pattern of numbers divisible by 3 similar to the pattern of numbers divisible by 2?

3. What is the greatest number that divides evenly into all the numbers having both a circle and an X?

4. What pattern emerges for the numbers divisible by both 3 and 2?

5. Name the first divisible number greater than 3 that would result in a similar pattern.

6. In Row 8, a triangle of numbers divisible by 2 begins. Each side of the triangle is 7 “units” or numerical entries long. It overlaps a triangle of numbers divisible by 3. In what row does that triangle start? How many units is the length of each of its sides?

7. In what row does the first triangle of numbers divisible by 6 begin? How many units is the length of each side?

8. What would happen if you erased all numbers divisible by 1?
Lesson 11.6
Level A

1. Each side is divided into fourths.

2. Each side is divided into fourths.

3. Each shaded square is divided into nine congruent squares. All the squares remain shaded except for the middle square, it is white.

Lesson 11.6
Level B

1. It is the Sierpinski gasket.

2. yes

3. 6

4. Sierpinski gasket

5. 4

6. row 9; 8 units

7. row 9; 6 units

8. It would disappear.

Lesson 11.6
Level C

1. 600 centimeters²; 1,000 centimeters³

2. 5400 centimeters²; 27,000 centimeters³

3. increases

4. greater; less

5. 672 centimeters²; 960 centimeters³

6. two rectangular prisms; dimensions are 2 by 2 by 4 centimeters.

7. 712 centimeters²; 928 centimeters³

8. 768 centimeters²; 896 centimeters³

9. decreases

10. no

Use the cube at the right for Exercises 1–3.

1. Find the surface area and the volume of the cube.
   Surface area: ___________ Volume: ___________

2. Multiply the sides of the cube by 3. Find the surface area and volume of the new cube.
   Surface area: ___________ Volume: ___________

3. As the surface area of a Euclidean cube increases, the volume ___________.

This sponge cube has a hole in the shape of a rectangular prism. Use this cube for Exercises 4–10.

4. Is the surface area of this figure less than or greater than the surface area of the cube above? Is the volume less than or greater than the volume of the cube above?
   Surface area: ___________ Volume: ___________

5. Find the surface area and the volume of the cube with the hole.
   Surface area: ___________________________ Volume: ___________________________

6. Suppose you create a second hole at the center of the top face that passes through to the bottom face of the cube. Describe what you remove and include the dimensions. ___________________________

7. What is the surface area and volume of the cube now that it has two holes?
   Surface area: ___________________________ Volume: ___________________________

8. A third hole is created at the center of the side face and passes through to the opposite face. Find the new surface area and volume.
   Surface area: ___________________________ Volume: ___________________________

9. Consider the three holes as one iteration. As the surface area of a sponge cube increases, the volume ___________________________.

10. Compare your answers to Exercises 3 and 9. Are they the same? ___________________________
Lesson 11.6
Level A
1.

2. Each side is divided into fourths
3. Each shaded square is divided into nine congruent squares. All the squares remain shaded except for the middle square, it is white.

Lesson 11.6
Level B

2.

3. \( \overrightarrow{PE} \) and \( \overrightarrow{PD} \)
4. \( M \)
5. \( K \)
6. \( \overrightarrow{QA}, \overrightarrow{QB}, \overrightarrow{QC} \)
7. \( M \)
8. \( L \)
For Exercises 1 and 2, sketch the preimage and image for each affine transformation on the given coordinate plane.

1. triangle: \( W(3, 2); X(1, 5); Y(0, 1) \)
   
   \[ T(x, y) = (2x, -y) \]

2. square: \( J(1, 4); K(3, 4); L(3, 6); M(1, 6) \)

   \[ T(x, y) = (-2x, \frac{y}{2}) \]

For Exercises 3–8, use the figure at the right.

If point \( P \) is the center of projection, then:

3. the projective rays are __________________.

4. the projection of \( L \) onto \( \overrightarrow{QB} \) is ________________________________.

5. the projection of \( I \) onto \( \overrightarrow{QC} \) is ________________________________.

If point \( Q \) is the center of projection, then:

6. the projective rays are ____________________.

7. the projection of \( I \) onto \( \overrightarrow{PD} \) is ________________________________.

8. the projection of \( H \) onto \( \overrightarrow{PD} \) is ________________________________.
Lesson 11.6
Level A
1. Each side is divided into fourths.

2. Each shaded square is divided into nine congruent squares. All the squares remain shaded except for the middle square, it is white.

Lesson 11.6
Level B
1. It is the Sierpinski gasket.

2. yes

3. 6

4. Sierpinski gasket

5. 4

6. row 9; 8 units

7. row 9; 6 units

8. It would disappear.

Lesson 11.6

8. 768 centimeters$^2$; 896 centimeters$^3$

9. decreases

10. no

Lesson 11.7
Level A
1. $\overrightarrow{PE}$ and $\overrightarrow{PD}$

2. $M$

3. $\overrightarrow{QA}$, $\overrightarrow{QB}$, $\overrightarrow{QC}$

4. $L$
Use the graph of $ABCD$ for Exercises 1–4.

1. Write the coordinates for the image of $ABCD$ after the transformation $T(x, y) = (-\frac{x}{2}, -y)$. Then find the ratio of the areas of $ABCD$ and its image.
   
   Image ____________________________
   
   Area ratio ________________________

2. Write the coordinates for the image of $ABCD$ after the transformation $T(x, y) = (2x, 3y)$. Then find the ratio of the areas of $ABCD$ and its image.
   
   Image ____________________________
   
   Area ratio ________________________

3. Write the coordinates for the image of $ABCD$ after the transformation $T(x, y) = (-x, 2y)$. Then find the ratio of the areas of $ABCD$ and its image.
   
   Image ____________________________
   
   Area ratio ________________________

4. Write the coordinates for the image of $ABCD$ after the transformation $T(x, y) = (ax, by)$. Then find the ratio of the areas of $ABCD$ and its image.
   
   Image ____________________________
   
   Area ratio ________________________

Use the graph of $\triangle ABC$ for Exercises 5–7.

5. If $\triangle ABC$ is projected onto the graph of $y = 6$ from the point $(0, 0)$, what will be the coordinates of its image?

6. If $\triangle ABC$ is projected onto the graph of $x = -6$ from the point $(2, 3)$, what will be the coordinates of its image?

7. Suppose $\triangle ABC$ is projected onto the graph of $y = 2x - 4$, and its image is $A'(5, 6), B'(3, 2)$, and $C'(1, -2)$. Name the coordinates of the center of projection.
Lesson 11.7
Level B

1. \( A'(-1, -2); \ B'(-1, -3); \ C'(-2, -3); \ D'(-2, -2); \)  
\[ 2 : 1 \]

2. \( A'(4, 6); \ B'(4, 9); \ C'(8, 9); \ D'(8, 6); \)  
\[ 1 : 6 \]

3. \( A'(-2, 4); \ B'(-2, 6); \ C'(-4, 6); \)  
\[ D'(-4, 4); \]  
\[ 1 : 2 \]

4. \( A'(2a, 2b); \ B'(2a, 3b); \ C'(4a, 3b); \)  
\[ D'(4a, 2b); \]  
\[ 1 : ab \]

5. \( A'(-8, 6); \ B'(3, 6); \ C'(-36, 6); \)

9. \( \left( \frac{-22}{5}, \frac{-9}{5} \right) \)

10. have the same center of projection
The endpoints of the base of a triangle are (1, 1) and (1, 5). The area of the triangle is 6 square units. Use this information for Exercises 1–4.

1. Describe all possible points that could be the third vertex of the triangle.

2. What are the endpoints of the image triangle's base after the transformation $T(x, y) = (3x, -2y)$?

3. Describe all possible points that could be the third vertex of the triangle's image after the transformation in Exercise 2.

4. What is the area of the new triangle? ______________

Points $A$, $B$, and $C$ were projected from a point $O$ onto the graph of the equation $y = -x + 7$. The image points were then projected onto $x = 10$ from $P(-2, 3)$, resulting in $A''(10, 9)$, $B''(10, 3)$, and $C''(10, 0)$. Use this information for Exercises 5–10.

5. Name the coordinate pairs of the first image points $A$, $B$, and $C$.

6. Name the coordinate pair for $O$. __________________

7. Name the coordinate pair for the intersection of $AA''$ and $BB''$. __________________

8. Name the coordinate pair for the intersection of $AA''$ and $CC''$. __________________

9. Name the coordinate pair for the intersection of $BB''$ and $CC''$. __________________

10. The points $A'$, $B'$, and $C'$ cannot be the first image points of $A$, $B$, and $C$ because their projective rays do not __________________.
## Answers

### Lesson 11.7

#### Level B

1. $A'(-1, -2); B'(-1, -3); C'(-2, -3); D'(-2, -2);$ 
   \[ 2 : 1 \]

2. $A'(4, 6); B'(4, 9); C'(8, 9); D'(8, 6);$ 
   \[ 1 : 6 \]

3. $A'(-2, 4); B'(-2, 6); C'(-4, 6); D'(-4, 4);$ 
   \[ 1 : 2 \]

4. $A'(2a, 2b); B'(2a, 3b); C'(4a, 3b); D'(4a, 2b);$ 
   \[ 1 : ab \]

5. $A'(-8, 6); B'(3, 6); C'(-36, 6)$

6. $A'(-6, 3); B'(-6, -5); C'\left(-6, \frac{5}{7}\right)$

7. $(-7, 2)$

#### Level C

1. $x = 4$ and $x = -2$

2. $(3, -2)$ and $(3, -10)$

3. $x = 12$ and $x = -6$

4. 36 units$^2$

5. $A'(2, 5), B'(4, 3), C'(6, 1)$

6. $(-2, -3)$

7. $\left(-\frac{14}{19}, -\frac{11}{19}\right)$

8. $\left(-\frac{118}{69}, -\frac{143}{138}\right)$

9. $\left(-\frac{22}{5}, -\frac{9}{5}\right)$

10. have the same center of projection
In Exercises 1–3, write a valid conclusion from the given premises. Identify the form of the argument.

1. If today is Friday, then today is the last day of John’s work week. Today is Friday. 

2. If a quadrilateral is a square, then the quadrilateral has four right angles. \(ABCD\) does not have four right angles.

3. If you get three strikes in baseball, then you’re out. Jose did not get out.

In Exercises 4–7, you are given the following premises:

If a person lives in Illinois, then that person lives in the U.S.A.

Abe lives in Illinois. Carol does not live in Illinois
Barbara lives in the U.S.A. David does not live in the U.S.A.

Which of the following conclusions are valid? Give the traditional name of the form of the argument.

4. Abe lives in the U.S.A. 

5. Barbara lives in Illinois. 

6. Carol does not live in the U.S.A. 

7. David does not live in Illinois.

In Exercises 8–11, you are given the following premises:

If a number is 2, then the square of the number is 4.

\(w = 2\) \(x \neq 2\) \(y^2 = 4\) \(z^2 \neq 4\)

Which of the following conclusions are valid? Give an example to show that each conclusion that is not valid may in fact be false, even when the premises are true.

8. \(w^2 = 4\)

9. \(x^2 \neq 4\)

10. \(y = 2\)

11. \(z \neq 2\)
Lesson 12.1
Level A
1. Today is the last day of John’s work week; modus ponens
2. ABCD is not a square; modus tollens
3. Jose did not get three strikes in baseball; modus tollens
4. valid; modus ponens
5. not valid; affirming the consequent
6. not valid; denying the antecedent
7. valid; modus tollens
8. valid
9. not valid; $x$ could be –2
10. not valid; $y$ could be –2
11. valid

Lesson 12.1
Level B
1. Sally will do well; modus ponens
2. Triangle ABC is not equilateral; modus tollens
3. I’ll be late for school; modus ponens; applied three times in succession
4. DEFG has four congruent sides; modus ponens
5. I did not go to the grocery superstore; modus tollens
6. valid
7. not valid; If $b$ were 6, $b$ would be divisible by 2 but not by 4.
8. not valid; If $c$ were 10, $c$ would not be divisible by 4 but would be divisible by 2.
9. valid

Lesson 12.1
Level C
1. No valid conclusion can be drawn.
2. No valid conclusion can be drawn.
3. Today is not Wednesday; modus tollens
4. not valid
5. not valid
6. valid; modus ponens
7. valid; modus tollens
8. valid
9. not valid; Triangle $DEF$ could be an isosceles right triangle.
10. not valid; Triangle $GHI$ could look like this:

11. valid

Lesson 12.2
Level A
1. false; The conjunction of true with false is false.
2. true; The disjunction of true with false is true.
3. true; The disjunction of true with true is true.
4. All cats were once kittens and blue is a color; true
5. Six is a prime number and five divides evenly into sixteen; false
6. Elephants can fly or dogs can bite; true
In Exercises 1–3, write a valid conclusion from the given premises. Identify the form of the argument.

1. If Sally studies for the test, then she will do well. Sally studies for the test.

   ________________________________

2. If a triangle is equilateral, then it is isosceles. Triangle $ABC$ is not isosceles.

   ________________________________

3. If I sleep through my alarm, then I will be running late. If I’m running late, then I’ll miss the bus. If I miss the bus, then I’ll be late for school. I sleep through my alarm.

   ________________________________

In Exercises 4 and 5, use two of the given premises to write a valid conclusion. Identify the form of the argument you used.

4. If a quadrilateral is a square, then the quadrilateral has four congruent sides. $ABCD$ has four congruent sides. $DEFG$ is a square.

   ________________________________

5. If I go to the grocery superstore today, then I will buy milk. I bought milk. I did not buy milk.

   ________________________________

In Exercises 6–9, you are given the following premises:

If a number is divisible by 4, then the number is divisible by 2.

$a$ is divisible by 4.  \hspace{1cm} c$ is not divisible by 4.

$b$ is divisible by 2.  \hspace{1cm} d$ is not divisible by 2.

Which of the following conclusions are valid? Give an example to show that each conclusion that is not valid may in fact be false, even when the premises are true.

6. $a$ is divisible by 2.   \hspace{1cm} ________________________________

7. $b$ is divisible by 4.   \hspace{1cm} ________________________________

8. $c$ is not divisible by 2. \hspace{1cm} ________________________________

9. $d$ is not divisible by 4. \hspace{1cm} ________________________________
Lesson 12.1
Level A
1. Today is the last day of John’s work week; modus ponens
2. ABCD is not a square; modus tollens
3. Jose did not get three strikes in baseball; modus tollens
4. valid; modus ponens
5. not valid; affirming the consequent
6. not valid; denying the antecedent
7. valid; modus tollens
8. valid
9. not valid; x could be –2
10. not valid; y could be –2
11. valid

Lesson 12.1
Level B
1. Sally will do well; modus ponens
2. Triangle ABC is not equilateral; modus tollens
3. I’ll be late for school; modus ponens; applied three times in succession
4. DEFG has four congruent sides; modus ponens
5. I did not go to the grocery superstore; modus tollens
6. valid
7. not valid; If $b$ were 6, $b$ would be divisible by 2 but not by 4.
8. not valid; If $c$ were 10, $c$ would not be divisible by 4 but would be divisible by 2.
9. valid

Lesson 12.1
Level C
1. No valid conclusion can be drawn.
2. No valid conclusion can be drawn.
3. Today is not Wednesday; modus tollens
4. not valid
5. not valid
6. valid; modus ponens
7. valid; modus tollens
8. valid
9. not valid; Triangle $DEF$ could be an isosceles right triangle.
10. not valid; Triangle $GHI$ could look like this:

11. valid

Lesson 12.2
Level A
1. false; The conjunction of true with false is false.
2. true; The disjunction of true with false is true.
3. true; The disjunction of true with true is true.
4. All cats were once kittens and blue is a color; true
5. Six is a prime number and five divides evenly into sixteen; false
6. Elephants can fly or dogs can bite; true
In Exercises 1 and 2, write a valid conclusion from the given premises. If no valid conclusion can be drawn, write **no valid conclusion**.

1. If two triangles are congruent, then they are similar. \( \triangle ABC \sim \triangle DEF \)

2. If the measure of an angle is \( 30^\circ \), then the sine value for that angle is 0.5. \( \sin \theta = 0.5 \).

Use **two of the given premises** to write a valid conclusion. Identify the form of the argument you used.

3. If today is Wednesday, then the cafeteria is serving pizza. The cafeteria is serving pizza. The cafeteria is not serving pizza.

In Exercises 4–7, you are given the following premises:

- If a person wins the district 100 meter race, then that person is a good runner.
- Abby did not win the district 100 meter race.
- Cathy won the district 100 meter race.
- Bob is a good runner.
- David is not a good runner.

Which of the following conclusions are valid? Give the traditional name of the form of the argument.

4. Abby is not a good runner. 

5. Bob won the district 100 meter race. 

6. Cathy is a good runner. 

7. David did not win the district 100 meter race. 

In Exercises 8–11, you are given the following premises:

- If a triangle is equilateral, then it is isosceles.
- \( \triangle ABC \) is equilateral. \( \triangle DEF \) is isosceles.
- \( \triangle GHI \) is not equilateral. \( \triangle JKL \) is not isosceles.

Which of the following conclusions are valid? Give an example to show that each of the conclusions that is not valid may in fact be false, even when the premises are true.

8. \( \triangle ABC \) is isosceles. 

9. \( \triangle DEF \) is equilateral. 

10. \( \triangle GHI \) is not isosceles. 

11. \( \triangle JKL \) is not equilateral.
### Lesson 12.1
#### Level A
1. Today is the last day of John’s work week; modus ponens
2. ABCD is not a square; modus tollens
3. Jose did not get three strikes in baseball; modus tollens
4. valid; modus ponens
5. not valid; affirming the consequent
6. not valid; denying the antecedent
7. valid; modus tollens
8. valid
9. not valid; \(x\) could be –2
10. not valid; \(y\) could be –2
11. valid

#### Level B
1. Sally will do well; modus ponens
2. Triangle ABC is not equilateral; modus tollens
3. I’ll be late for school; modus ponens; applied three times in succession
4. DEFG has four congruent sides; modus ponens
5. I did not go to the grocery superstore; modus tollens
6. valid
7. not valid; If \(b\) were 6, \(b\) would be divisible by 2 but not by 4.
8. not valid; If \(c\) were 10, \(c\) would not be divisible by 4 but would be divisible by 2.
9. valid

#### Level C
1. No valid conclusion can be drawn.
2. No valid conclusion can be drawn.
3. Today is not Wednesday; modus tollens
4. not valid
5. not valid
6. valid; modus ponens
7. valid; modus tollens
8. valid
9. not valid; Triangle \(DEF\) could be an isosceles right triangle.
10. not valid; Triangle \(GHI\) could look like this:

\[
\begin{align*}
\text{\textbullet} & \quad \text{\textbullet} \\
\text{\textbullet} & \quad \text{\textbullet} \\
\text{\textbullet} & \\
\end{align*}
\]
11. valid

### Lesson 12.2
#### Level A
1. false; The conjunction of true with false is false.
2. true; The disjunction of true with false is true.
3. true; The disjunction of true with true is true.
4. All cats were once kittens and blue is a color; true
5. Six is a prime number and five divides evenly into sixteen; false
6. Elephants can fly or dogs can bite; true
In Exercises 1–3, indicate whether each compound statement is true or false. Explain your reasoning.

1. All squares are rectangles and all triangles are isosceles.

2. All squares are rectangles or all triangles are isosceles.

3. Fish can swim or birds can sing.

In Exercises 4 and 5, write a conjunction for each pair of statements. Determine whether the conjunction is true or false.

4. All cats were once kittens. Blue is a color.

5. Six is a prime number. Five divides into 16 evenly.

In Exercises 6 and 7, write a disjunction for each pair of statements. Determine whether each disjunction is true or false.

6. Elephants can fly. Dogs can bite.

7. Corn is a fruit. Apples grow on vines.

In Exercises 8–10, write the statement expressed by the symbols, where \( p, q, r, \) and \( s \) represent the statements shown below.

- \( p: \) Dudley is a muggle.
- \( q: \) \( 1 + 1 = 3 \)
- \( r: \) \( x + 3 > 4 \)
- \( s: \) \( x < 0 \)

8. \( \sim s \)

9. \( p \) OR \( \sim q \)

10. \( \sim (r \text{ AND } s) \)

11. Complete the following truth table:

<table>
<thead>
<tr>
<th>( p )</th>
<th>( q )</th>
<th>( \sim p )</th>
<th>( \sim p \text{ OR } q )</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>T</td>

<tr>
<td>F</td>
<td>F</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Lesson 12.1
Level A
1. Today is the last day of John’s work week; modus ponens
2. ABCD is not a square; modus tollens
3. Jose did not get three strikes in baseball; modus tollens
4. valid; modus ponens
5. not valid; affirming the consequent
6. not valid; denying the antecedent
7. valid; modus tollens
8. valid
9. not valid; \( x \) could be \(-2\)
10. not valid; \( y \) could be \(-2\)
11. valid

Lesson 12.1
Level B
1. Sally will do well; modus ponens
2. Triangle ABC is not equilateral; modus tollens
3. I’ll be late for school; modus ponens; applied three times in succession
4. DEFG has four congruent sides; modus ponens
5. I did not go to the grocery superstore; modus tollens
6. valid
7. not valid; If \( b \) were 6, \( b \) would be divisible by 2 but not by 4.
8. not valid; If \( c \) were 10, \( c \) would not be divisible by 4 but would be divisible by 2.
9. valid

Lesson 12.1
Level C
1. No valid conclusion can be drawn.
2. No valid conclusion can be drawn.
3. Today is not Wednesday; modus tollens
4. not valid
5. not valid
6. valid; modus ponens
7. valid; modus tollens
8. valid
9. not valid; Triangle \( DEF \) could be an isosceles right triangle.
10. not valid; Triangle \( GHI \) could look like this:

![](triangle.png)

11. valid

Lesson 12.2
Level A
1. false; The conjunction of true with false is false.
2. true; The disjunction of true with false is true.
3. true; The disjunction of true with true is true.
4. All cats were once kittens and blue is a color; true
5. Six is a prime number and five divides evenly into sixteen; false
6. Elephants can fly or dogs can bite; true
Answers

7. Corn is a fruit or apples grow on vines; false.

8. \( x \geq 0 \)

9. Dudley is a muggle or \( 1 + 1 \neq 3 \).

10. It is not true that both \( x + 3 > 4 \) and \( x < 0 \).

11. \[
\begin{array}{c|c|c|c}
 p & q & \neg p & \neg p \lor q \\
\hline
 T & T & F & T \\
 T & F & F & F \\
 F & T & T & T \\
 F & T & T & T \\
\end{array}
\]

Lesson 12.2

Level B

1. true; The conjunction of true with true is true.

2. true; The disjunction of true with true is true.

3. false; The disjunction of false with false is false.

4. All paper is white and all pen ink is blue. False.

5. \( 2 > 3 \) and \( 5 + 6 = 11 \); false

6. \( 2 > 3 \) or \( 5 + 6 = 11 \); true

7. Six is an even integer or six divides into 18; true

8. \( x \leq 0 \)

9. Dudley is a muggle or \( 1 + 1 = 2 \).

10. It is not true that both \( x + 5 < 4 \) and \( x > 0 \).

11. \[
\begin{array}{c|c|c|c|c|c|c}
 p & q & \neg p & \neg p \lor q & -(p \lor q) & -(p \land \neg q) \\
\hline
 T & T & T & T & F & F \\
 T & F & F & F & F & F \\
 F & T & T & T & F & F \\
 F & F & F & F & T & T \\
\end{array}
\]

Level C

1. false; The conjunction of true with false is false.

2. true; The disjunction of true with false is true.

3. true; The disjunction of true with true is true.

4. Every square is a rhombus and all triangles have three sides; true

5. For all numbers \( x \), \( x^2 > 0 \) and \( 2 \cdot 5 = 10 \); false

6. Three is greater than two or \( 5 + 4 = 9 \); true

7. Bears hibernate in winter or snakes are mammals; true

8. \( x \leq 4 \)

9. Steve likes to play baseball or \( 1 + 6 \neq 5 \).

10. It is not true that both \( x > 4 \) and \( x + 3 < 5 \).
Practice Masters Level B

12.2 And, Or, and Not in Logical Arguments

In Exercises 1–3, indicate whether each compound statement is true or false. Explain your reasoning.

1. Three is a prime number and four is a perfect square.

2. Three is a prime number or four is a perfect square.

3. Fish are mammals or bats are reptiles.

In Exercises 4 and 5, write a conjunction for each pair of statements. Determine whether the conjunction is true or false.

4. All paper is white. All pen ink is blue.

5. Two is greater than three. $5 + 6 = 11$

In Exercises 6 and 7, write a disjunction for each pair of statements. Determine whether each disjunction is true or false.

6. Two is greater than three. $5 + 6 = 11$

7. Six is an even integer. Six divides into 18.

In Exercises 8–10, write the statement expressed by the symbols, where $p$, $q$, $r$, and $s$ represent the statements shown below.

- $p$: Dudley is a muggle.
- $q$: $1 + 1 = 2$
- $r$: $x + 5 < 4$
- $s$: $x > 0$

8. $\sim s$

9. $p \text{ OR } q$

10. $\sim (r \text{ AND } s)$

11. Complete the following truth table:

<table>
<thead>
<tr>
<th>$p$</th>
<th>$q$</th>
<th>$\sim q$</th>
<th>$p \text{ OR } \sim q$</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>

<td>F</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Answers

7. Corn is a fruit or apples grow on vines; false.
8. \( x \geq 0 \)
9. Dudley is a muggle or \( 1 + 1 \neq 3 \).
10. It is not true that both \( x + 3 > 4 \) and \( x < 0 \).

11. \[
\begin{array}{ccc}
 p & q & \neg p \\
 T & T & F \\
 T & F & F \\
 F & T & T \\
 F & T & T \\
\end{array}
\]

Lesson 12.2
Level B

1. true; The conjunction of true with true is true.
2. true; The disjunction of true with true is true.
3. false; The disjunction of false with false is false.
4. All paper is white and all pen ink is blue. False.
5. \( 2 > 3 \) and \( 5 + 6 = 11 \); false
6. \( 2 > 3 \) or \( 5 + 6 = 11 \); true
7. Six is an even integer or six divides into 18; true
8. \( x \leq 0 \)
9. Dudley is a muggle or \( 1 + 1 = 2 \).
10. It is not true that both \( x > 4 \) and \( x + 3 < 5 \).

11. \[
\begin{array}{ccc}
 p & q & -p \ OR \ q \\
 T & T & F \\
 T & F & F \\
 F & T & T \\
 F & T & T \\
\end{array}
\]

Lesson 12.2
Level C

1. false; The conjunction of true with false is false.
2. true; The disjunction of true with false is true.
3. true; The disjunction of true with true is true.
4. Every square is a rhombus and all triangles have three sides; true
5. For all numbers \( x, x^2 > 0 \) and \( 2 \cdot 5 = 10 \); false
6. Three is greater than two or \( 5 + 4 = 9 \); true
7. Bears hibernate in winter or snakes are mammals; true
8. \( x \leq 4 \)
9. Steve likes to play baseball or \( 1 + 6 \neq 5 \).
10. It is not true that both \( x > 4 \) and \( x + 3 < 5 \).

11. \[
\begin{array}{ccc}
 p & q & \neg p \ OR \ q \\
 T & T & F \\
 T & F & F \\
 F & T & F \\
 F & T & F \\
\end{array}
\]
In Exercises 1–3, indicate whether each compound statement is true or false. Explain your reasoning.

1. Friday follows Thursday and all weeks have 8 days.
2. Friday follows Thursday or all weeks have 8 days.
3. Five is a prime number or two is an even integer.

In Exercises 4 and 5, write a conjunction for each pair of statements. Determine whether the conjunction is true or false.

4. Every square is a rhombus. All triangles have three sides.
5. For all numbers \( x, x^2 > 0 \). \( 2 \cdot 5 = 10 \)

In Exercises 6 and 7, write a disjunction for each pair of statements. Determine whether each disjunction is true or false.

6. Three is greater than two. \( 5 + 4 = 9 \)
7. Bears hibernate in winter. Snakes are mammals.

In Exercises 8–10, write the statement expressed by the symbols, where \( p, q, r, \) and \( s \) represent the statements shown below.

\[ p: \text{Steve likes to play baseball.} \]
\[ q: x > 4 \]
\[ r: 1 + 6 = 5 \]
\[ s: x + 3 < 5 \]

8. \( \sim q \)
9. \( p \ OR (\sim r) \)
10. \( \sim (q \ AND s) \)

11. Complete the following truth table and the statement below:

<table>
<thead>
<tr>
<th>( p )</th>

For each conditional in Exercises 1-3, explain why it is true or false. Then write the converse, inverse, and contrapositive, and explain why each is true or false.

1. Conditional: If two angles are vertical angles, then the two angles are congruent.
   
   Converse: 
   
   Inverse: 
   
   Contrapositive: 

2. Conditional: For numbers \( a, b, \) and \( c, \) if \( a + c < b + c, \) then \( a < b.\)
   
   Converse: 
   
   Inverse: 
   
   Contrapositive: 

3. Conditional: If \( 1 + 1 = 2, \) then elephants can fly.
   
   Converse: 
   
   Inverse: 
   
   Contrapositive: 

For Exercises 4–6, write each statement in if-then form.

4. When the car runs out of gas, it will stop.

5. All puppies are cute.

6. We’ll go to the park if the weather is nice.
Lesson 12.3
Level A

1. True; It was proven true as a theorem.
   Converse: If two angles are congruent, then they are vertical angles. False—two angles which have the same measure need not be formed by opposite rays.
   Inverse: If two angles are not vertical angles, then they are not congruent. False—two angles that are not formed by opposite rays could still have the same measure.
   Contrapositive: If two angles are not congruent, then they are not vertical angles. True—equivalent in meaning to the original statement, a theorem.

2. True. It is the subtraction property of inequality from algebra:
   Converse: For numbers $a$, $b$, and $c$, if $a < b$ then $a + c < b + c$. True—the addition property of inequality from algebra.
   Inverse: For numbers $a$, $b$, and $c$, if $a + c \not\geq b + c$, then $a \not\geq b$. True—subtraction property of equality and inequality from algebra.
   Contrapositive: For numbers $a$, $b$, and $c$, if $a \geq b$, then $a + c \geq b + c$. True—addition property of equality and inequality from algebra.

3. False. When the premise is true and the consequent is false, then a conditional statement is considered to be false.
   Converse: If elephants can fly, then $1 + 1 = 2$. True—a conditional statement with a false premise is considered to be true.
   Inverse: If $1 + 1 \neq 2$, then elephants can’t fly. True—a conditional statement with a false premise is considered to be true.
   Contrapositive: If elephants can't fly, then $1 + 1 \neq 2$.
   False—a conditional with a true premise and a false consequent is considered to be false.

4. If the car runs out of gas, then it will stop.

5. If an animal is a puppy, then it is cute.

6. If the weather is nice, then we’ll go to the park.

Lesson 12.3
Level B

1. False. If $c$ is a negative number, multiplication by $c$ reverses the direction of the inequality sign. Converse: For numbers $a$, $b$, and $c$, if $ac > bc$ then $a > b$. False—division by a negative number would reverse the direction of the inequality sign.
   Inverse: For numbers $a$, $b$, and $c$, if $a \leq b$ then $ac \leq bc$. False—for example $2 \leq 5$, but multiplication by $c = -1$ gives $-2 \geq -5$.
   Contrapositive: For numbers $a$, $b$, and $c$, $ac \leq bc$, then $a \leq b$. False—again, the use of a negative number for $c$ can provide a counterexample.
For each conditional in Exercises 1-3, explain why it is true or false. Then write the converse, inverse, and contrapositive, and explain why each is true or false.

1. Conditional: For numbers $a$, $b$, and $c$, if $a > b$, then $ac > bc$. __________________________
   
   Converse: __________________________
   
   Inverse: __________________________
   
   Contrapositive: __________________________

2. Conditional: If $\angle A \equiv \angle B$, then $\sin A = \sin B$. __________________________
   
   Converse: __________________________
   
   Inverse: __________________________
   
   Contrapositive: __________________________

3. Conditional: If $2 \neq 3$, then $5 \neq 6$. __________________________
   
   Converse: __________________________
   
   Inverse: __________________________
   
   Contrapositive: __________________________

For Exercises 4–6, write each statement in if-then form.

4. I’ll pay you when you finish the job. __________________________

5. All lizards are reptiles. __________________________

6. Following this diet will help me lose weight. __________________________
Lesson 12.3
Level A

1. True; It was proven true as a theorem.
Converse: If two angles are congruent, then they are vertical angles. False—two angles which have the same measure need not be formed by opposite rays.
Inverse: If two angles are not vertical angles, then they are not congruent. False—two angles that are not formed by opposite rays could still have the same measure.
Contrapositive: If two angles are not congruent, then they are not vertical angles. True—equivalent in meaning to the original statement, a theorem.

2. True. It is the subtraction property of inequality from algebra:
Converse: For numbers $a$, $b$, and $c$, if $a < b$ then $a + c < b + c$. True—the addition property of inequality from algebra.
Inverse: For numbers $a$, $b$, and $c$, if $a + c \geq b + c$, then $a \geq b$. True—subtraction property of equality and inequality from algebra.
Contrapositive: For numbers $a$, $b$, and $c$, if $a \geq b$, then $a + c \geq b + c$. True—addition property of equality and inequality from algebra.

3. False. When the premise is true and the consequent is false, then a conditional statement is considered to be false.
Converse: If elephants can fly, then $1 + 1 = 2$. True—a conditional statement with a false premise is considered to be true.
Inverse: If $1 + 1 \neq 2$, then elephants can’t fly. True—a conditional statement with a false premise is considered to be true.
Contrapositive: If elephants can't fly, then $1 + 1 \neq 2$.
False—a conditional with a true premise and a false consequent is considered to be false.

4. If the car runs out of gas, then it will stop.

5. If an animal is a puppy, then it is cute.

6. If the weather is nice, then we’ll go to the park.

Lesson 12.3
Level B

1. False. If $c$ is a negative number, multiplication by $c$ reverses the direction of the inequality sign. Converse: For numbers $a$, $b$, and $c$, if $ac > bc$ then $a > b$. False—division by a negative number would reverse the direction of the inequality sign.
Inverse: For numbers $a$, $b$, and $c$, if $a \leq b$ then $ac \leq bc$. False—for example $2 \leq 5$, but multiplication by $c = -1$ gives $-2 > -5$.
Contrapositive: For numbers $a$, $b$, and $c$, $ac \leq bc$, then $a \leq b$. False—again, the use of a negative number for $c$ can provide a counterexample.
2. True—the value of the sine ratio depends solely on the angle’s measure so congruent angles have equal sine values.

Converse: If \( \sin A = \sin B \), then \( \angle A \equiv \angle B \). False—for example, \( \sin 30^\circ = \sin 150^\circ \), but \( 30 \neq 150 \).

Inverse: If \( \angle A \) is not congruent to \( \angle B \), then \( \sin A \neq \sin B \). False—for example, if \( m\angle A = 10^\circ \) and \( m\angle B = 170^\circ \), then angles \( A \) and \( B \) are not congruent, yet \( \sin 10^\circ = \sin 170^\circ \).

Contrapositive: If \( \sin A \neq \sin B \), then \( \angle A \neq \angle B \). True—same meaning as original true statement.

3. True. A conditional with a false precedent is considered to be true. Also, notice you can get to \( 5 = 6 \) by adding 3 to both sides of \( 2 = 3 \), using the addition property of equality.

Converse: If \( 5 = 6 \), then \( 2 = 3 \). True—a conditional with a false precedent is considered to be true.

Inverse: If \( 2 \neq 3 \), then \( 5 \neq 6 \). True—a conditional with a true precedent and a true consequent is considered to be true.

Contrapositive: If \( 5 \neq 6 \), then \( 2 \neq 3 \). True—a conditional with a true premise and a true consequent is considered to be true.

4. If you finish the job, then I’ll pay you.

5. If an animal is a lizard, then it is a reptile.

6. If I follow this diet, then I will lose weight.

Lesson 12.3
Level C

1. True. To have the sum of their measures be \( 90^\circ \), each must be \( < 90^\circ \).

Converse: If two angles are both acute, then they are complementary angles. False—for example, if each angle had measure \( 32^\circ \) they would both be acute, but the sum of their measures would not be \( 90^\circ \).

Inverse: If two angles are not complementary angles, then they are not both acute. False—for example, if the angles had measures of \( 10^\circ \) and \( 20^\circ \), they would not be complementary, but they would both be acute.

Contrapositive: If two angles are not both acute, then they are not complementary. True—if at least one were not an acute angle, it would have measured \( \geq 90^\circ \). This would not allow for any possible positive measure for the other angle in order to have a sum of measures of \( 90^\circ \).

2. False. The premise would be true for point-\( X \) located anywhere on a perpendicular bisector of \( AB \), but not necessarily located on \( AB \), as the midpoint would have to be.

Converse: If \( X \) is the midpoint of \( AB \), then \( AX = XB \). True, due to the definition of midpoint.

Inverse: If \( AX \neq XB \), then \( X \) is not the midpoint of \( AB \). True, due to the definition on midpoint.

Contrapositive: If \( X \) is not the midpoint of \( AB \), then \( AX \neq XB \). False—for example, when point \( X \) is the vertex of an isosceles triangle with base \( AB \), then \( X \) is not the midpoint of \( AB \) but \( AX = XB \).
For each conditional in Exercises 1–3, explain why it is true or false. Then write the converse, inverse, and contrapositive, and explain why each is true or false.

1. Conditional: If two angles are complementary angles, then they are both acute. _________
   Converse: ____________________________
   Inverse: ____________________________
   Contrapositive: ____________________________

2. Conditional: If $AX = XB$, then $X$ is the midpoint of segment $AB$. ________________
   Converse: ____________________________
   Inverse: ____________________________
   Contrapositive: ____________________________

3. Conditional: If a tail is a leg, then horses have 5 legs. ________________
   Converse: ____________________________
   Inverse: ____________________________
   Contrapositive: ____________________________

For Exercises 4–6, write each statement in if-then form.

4. All desserts are sweet. ____________________________
5. We’ll play baseball if it doesn’t rain. ____________________________
6. Numbers divisible by five end in either 5 or 0. ____________________________
2. True—the value of the sine ratio depends solely on the angle’s measure so congruent angles have equal sine values.

Converse: If \( \sin A = \sin B \), then \( \angle A \cong \angle B \). False—for example, \( \sin 30^\circ = \sin 150^\circ \), but \( 30 \neq 150 \).

Inverse: If \( \angle A \) is not congruent to \( \angle B \), then \( \sin A \neq \sin B \). False—for example, if \( m\angle A = 10^\circ \) and \( m\angle B = 170^\circ \), then angles \( A \) and \( B \) are not congruent, yet \( \sin 10^\circ = \sin 170^\circ \).

Contrapositive: If \( \sin A \neq \sin B \), then \( \angle A \neq \angle B \). True—same meaning as original true statement.

3. True. A conditional with a false precedent is considered to be true. Also, notice you can get to \( 5 = 6 \) by adding \( 3 \) to both sides of \( 2 = 3 \), using the addition property of equality.

Converse: If \( 5 = 6 \), then \( 2 = 3 \). True—a conditional with a false precedent is considered to be true.

Inverse: If \( 2 \neq 3 \), then \( 5 \neq 6 \). True—a conditional with a true precedent and a true consequent is considered to be true.

Contrapositive: If \( 5 \neq 6 \), then \( 2 \neq 3 \). True—a conditional with a true premise and a true consequent is considered to be true.

4. If you finish the job, then I’ll pay you.

5. If an animal is a lizard, then it is a reptile.

6. If I follow this diet, then I will lose weight.

---

**Lesson 12.3**

**Level C**

1. True. To have the sum of their measures be \( 90^\circ \), each must be \( < 90^\circ \).

Converse: If two angles are both acute, then they are complementary angles. False—for example, if each angle had measure \( 32^\circ \) they would both be acute, but the sum of their measures would not be \( 90^\circ \).

Inverse: If two angles are not complementary angles, then they are not both acute. False—for example, if the angles had measures of \( 10^\circ \) and \( 20^\circ \), they would not be complementary, but they would both be acute.

Contrapositive: If two angles are not both acute, then they are not complementary. True—if at least one were not an acute angle, it would have measured \( \geq 90^\circ \). This would not allow for any possible positive measure for the other angle in order to have a sum of measures of \( 90^\circ \).

2. False. The premise would be true for point-X located anywhere on a perpendicular bisector of \( AB \), but not necessarily located on \( AB \), as the midpoint would have to be.

Converse: If \( X \) is the midpoint of \( AB \), then \( AX = XB \). True, due to the definition of midpoint.

Inverse: If \( AX \neq XB \), then \( X \) is not the midpoint of \( AB \). True, due to the definition on midpoint.

Contrapositive: If \( X \) is not the midpoint of \( AB \), then \( AX \neq XB \). False—for example, when point \( X \) is the vertex of an isosceles triangle with base \( AB \), then \( X \) is not the midpoint of \( AB \) but \( AX = XB \).
3. True. A conditional with a false premise is considered to be true.

   Converse: If horses have 5 legs, then a tail is a leg. True, a conditional with a false premise is considered to be true.

   Inverse: If a tail is not a leg, then horses do not have 5 legs. True, a conditional with a true premise and a true consequent is considered true.

   Contrapositive: If horses do not have 5 legs, then a tail is not a leg. True, a conditional with a true premise and a true consequent is considered true.

4. If a food is a dessert, then it is sweet.

5. If it doesn’t rain, then we’ll play baseball.

6. If a number is divisible by five, then it ends in either 5 or 0.

Lesson 12.4
Level A

1. \( \triangle ABC \) is both an obtuse triangle and not an obtuse triangle.

2. All integers are even and not all integers are even. (Alternate answer: All integers are even and some integers are not even.)

3. \( x > 3 \) and \( x \leq 3 \)

4. Two lines meet in exactly one point and two lines do not meet in exactly one point.

5. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

6. Not indirect reasoning. This is the form of argument called asserting the consequent, which is not valid.

7. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

Lesson 12.4
Level B

1. \( x < 2 \) and \( x \geq 2 \)

2. \( a = 5 \) and \( a \neq 5 \)

3. Some parties are fun and no parties are fun.

4. All people are honest and some people are not honest.

5. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

6. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

7. \( c^2 \leq b^2 \)

8. Pythagorean Theorem

9. Transitive property

10. The fact that the square of any positive number is positive.

Lesson 12.4
Level C

1. \( 2x + 1 = 3 \) and \( 2x + 1 \neq 3 \)

2. \( y^2 > 0 \) and \( y^2 \leq 0 \)

3. Some people have blue eyes and no people have blue eyes.

4. All squares are rectangles and some squares are not rectangles.
In Exercises 1–4, form a contradiction by using each statement and its negation.

1. \( \triangle ABC \) is an obtuse triangle. 
2. All integers are even. 
3. \( x > 3 \) 
4. Two lines meet in exactly one point.

In Exercises 5–7, determine whether the given argument is an example of indirect reasoning. Explain why or why not.

5. If Shannon had been in Florida, then she’d have a good suntan. But Shannon does not have a good tan. Therefore, she has not been in Florida.

6. If Joey misses his bus, then he is late to school. Joey is late to school, so Joey must have missed his bus.

7. If Chris falls asleep in class, he will surely fail the next test. Chris does not fall asleep in class. Therefore, Chris will not fail the next test.

Complete the indirect proof below.

**Prove:** \( 2(5 + 6x) \neq 4(3x + 2) \) for any real number \( x \).

**Indirect Proof:** Suppose that \( 2(5 + 6x) = 4(3x + 2) \) for some real number \( x \).

8. Then \( 10 + 12x = 12x + 8 \) by the ________________ property of algebra.

9. And then \( 10 = 8 \) by the ________________

But \( 10 = 8 \) is a false statement, a contradiction.

10. Therefore, the opposite of the assumption is true, that is ________________.
3. True. A conditional with a false premise is considered to be true.

Converse: If horses have 5 legs, then a tail is a leg. True, a conditional with a false premise is considered to be true.

Inverse: If a tail is not a leg, then horses do not have 5 legs. True, a conditional with a true premise and a true consequent is considered true.

Contrapositive: If horses do not have 5 legs, then a tail is not a leg. True, a conditional with a true premise and a true consequent is considered true.

4. If a food is a dessert, then it is sweet.

5. If it doesn’t rain, then we’ll play baseball.

6. If a number is divisible by five, then it ends in either 5 or 0.

Lesson 12.4
Level A

1. \( \triangle ABC \) is both an obtuse triangle and not an obtuse triangle.

2. All integers are even and not all integers are even. (Alternate answer: All integers are even and some integers are not even.)

3. \( x > 3 \) and \( x \leq 3 \)

4. Two lines meet in exactly one point and two lines do not meet in exactly one point.

5. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

6. Not indirect reasoning. This is the form of argument called asserting the consequent, which is not valid.

7. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

8. Distributive.

9. Subtraction Property of Equality

10. \( 2(5 + 6x) \neq 4(3x + 2) \) for any real number \( x \).

Lesson 12.4
Level B

1. \( x < 2 \) and \( x \geq 2 \)

2. \( a = 5 \) and \( a \neq 5 \)

3. Some parties are fun and no parties are fun.

4. All people are honest and some people are not honest.

5. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

6. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

7. \( c^2 \leq b^2 \)

8. Pythagorean Theorem

9. Transitive property

10. The fact that the square of any positive number is positive.

Lesson 12.4
Level C

1. \( 2x + 1 = 3 \) and \( 2x + 1 \neq 3 \)

2. \( y^2 > 0 \) and \( y^2 \leq 0 \)

3. Some people have blue eyes and no people have blue eyes.

4. All squares are rectangles and some squares are not rectangles.
In Exercises 1–4, form a contradiction by using each statement and its negation.

1. \( x < 2 \)

2. \( a = 5 \)

3. Some parties are fun.

4. All people are honest.

In Exercises 5 and 6, determine whether the given argument is an example of indirect reasoning. Explain why or why not.

5. If Charlie works hard all day, he'll complete the painting of the fence. Charlie did not work hard all day, so he must not have finished painting the fence.

6. If the neighbors were planning a cookout today, they would have their grill out by now. Their grill is not out, so they must not be having a cookout.

Complete the indirect proof below.

**Theorem:** The hypotenuse of a right triangle is its longest side.

**Given:** Right triangle \( ABC \), with side lengths \( a > 0, b > 0, \) and \( c > 0 \).

The length of the hypotenuse is \( c \).

**Prove:** \( c > b \). (A similar argument could be used to prove \( c > a \).)

**Indirect Proof:** Suppose that \( c \leq b \), that is, \( c = b \).

7. From algebra, for positive numbers, squaring preserves inequality, so \( \) \( \).

8. Now \( a^2 + b^2 = c^2 \) by the \( \).

9. so \( a^2 + b^2 \leq b^2 \), using \( \).

10. Subtracting \( b^2 \) from both sides gives \( a^2 \leq 0 \), which is a contradiction of: \( \).

So, the assumption that \( c \leq b \) is false; it leads to a contradiction. That is, \( c > b \) is true.
3. True. A conditional with a false premise is considered to be true.

Converse: If horses have 5 legs, then a tail is a leg. True, a conditional with a false premise is considered to be true.

Inverse: If a tail is not a leg, then horses do not have 5 legs. True, a conditional with a true premise and a true consequent is considered true.

Contrapositive: If horses do not have 5 legs, then a tail is not a leg. True, a conditional with a true premise and a true consequent is considered true.

4. If a food is a dessert, then it is sweet.

5. If it doesn’t rain, then we’ll play baseball.

6. If a number is divisible by five, then it ends in either 5 or 0.

Lesson 12.4
Level A

1. \( \triangle ABC \) is both an obtuse triangle and not an obtuse triangle.

2. All integers are even and not all integers are even. (Alternate answer: All integers are even and some integers are not even.)

3. \( x > 3 \) and \( x \leq 3 \)

4. Two lines meet in exactly one point and two lines do not meet in exactly one point.

5. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

6. Not indirect reasoning. This is the form of argument called asserting the consequent, which is not valid.

7. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

8. Distributive.

9. Subtraction Property of Equality

10. \( 2(5 + 6x) \neq 4(3x + 2) \) for any real number \( x \).

Lesson 12.4
Level B

1. \( x < 2 \) and \( x \geq 2 \)

2. \( a = 5 \) and \( a \neq 5 \)

3. Some parties are fun and no parties are fun.

4. All people are honest and some people are not honest.

5. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

6. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

7. \( c^2 \leq b^2 \)

8. Pythagorean Theorem

9. Transitive property

10. The fact that the square of any positive number is positive.

Lesson 12.4
Level C

1. \( 2x + 1 = 3 \) and \( 2x + 1 \neq 3 \)

2. \( y^2 > 0 \) and \( y^2 \leq 0 \)

3. Some people have blue eyes and no people have blue eyes.

4. All squares are rectangles and some squares are not rectangles.
In Exercises 1–4, form a contradiction by using each statement and its negation.

1. $2x + 1 = 3$  
2. $y^2 > 0$  
3. Some people have blue eyes.  
4. All squares are rectangles.

In Exercises 5 and 6, determine whether the given argument is an example of indirect reasoning. Explain why or why not.

5. If those dark clouds meant a severe thunderstorm, the warning siren would have sounded. The warning siren has not sounded, so there will not be a severe thunderstorm.

6. If Keisha plays soft music while she studies, she can concentrate better. Keisha was not able to play soft music while studying at a friend’s house, so she couldn’t concentrate.

Complete the indirect proof below.

**Uniqueness of Perpendiculars Theorem:** From a point outside a line, there is only one line perpendicular to the given line.

**Given:** Line $l$ with point $P$ not on $l$, $PX \perp l$ at point $X$ on $l$.

**Prove:** There is no other point $Y$ on $l$ such that $PY \perp l$.

7. **Indirect Proof:** Suppose $PY \perp l$.

(Hint: Start by assuming the negation of what is to be proven. Then continue drawing logical conclusions until you arrive at a contradiction. Be sure you add your assumed line segment to the figure above.)
3. True. A conditional with a false premise is considered to be true.

Converse: If horses have 5 legs, then a tail is a leg. True, a conditional with a false premise is considered to be true.

Inverse: If a tail is not a leg, then horses do not have 5 legs. True, a conditional with a true premise and a true consequent is considered true.

Contrapositive: If horses do not have 5 legs, then a tail is not a leg. True, a conditional with a true premise and a true consequent is considered true.

4. If a food is a dessert, then it is sweet.

5. If it doesn’t rain, then we’ll play baseball.

6. If a number is divisible by five, then it ends in either 5 or 0.

Lesson 12.4
Level A

1. $\triangle ABC$ is both an obtuse triangle and not an obtuse triangle.

2. All integers are even and not all integers are even. (Alternate answer: All integers are even and some integers are not even.)

3. $x > 3$ and $x \leq 3$

4. Two lines meet in exactly one point and two lines do not meet in exactly one point.

5. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

6. Not indirect reasoning. This is the form of argument called asserting the consequent, which is not valid.

7. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

8. Distributive.

9. Subtraction Property of Equality

10. $2(5 + 6x) \neq 4(3x + 2)$ for any real number $x$.

Lesson 12.4
Level B

1. $x < 2$ and $x \geq 2$

2. $a = 5$ and $a \neq 5$

3. Some parties are fun and no parties are fun.

4. All people are honest and some people are not honest.

5. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

6. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

7. $c^2 \leq b^2$

8. Pythagorean Theorem

9. Transitive property

10. The fact that the square of any positive number is positive.

Lesson 12.4
Level C

1. $2x + 1 = 3$ and $2x + 1 \neq 3$

2. $y^2 > 0$ and $y^2 \leq 0$

3. Some people have blue eyes and no people have blue eyes.

4. All squares are rectangles and some squares are not rectangles.
5. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

6. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

7. Suppose there is another point \( Y \) and \( l \) such that \( \overline{PY} \perp l \). Then \( PXY \) is a triangle that has two right angles in it. But this is impossible. It contradicts the fact that the sum of the measures of the angles of a triangle is \( 180^\circ \). Therefore the assumption was false and there is only one line through Point \( P \) that is perpendicular to \( l \).

15. 0, 1
16. 0, 0

**Lesson 12.5**

**Level B**

1. \( p \) or Not \( q \)
2. Not \((p \text{ and not } q)\)
3. \( p \quad q \)
4. \( p \quad q \)
5. 0, 0, 0
6. 0, 1, 0
7. 1, 0, 0
8. 1, 1, 1
9. 1, 0, 0
10. 1, 1, 1
11. 1, 0, 0
12. 1, 1, 1
13. 1, 0, 0
14. 1, 1, 1
15. 0, 0, 0
16. 0, 1, 0
In Exercises 1 and 2, create a logical expression that corresponds to each network.

1. \( p \quad \text{NOT} \quad q \quad \text{OR} \)

2. \( p \quad \text{NOT} \quad q \quad \text{AND} \quad \text{NOT} \)

In Exercises 3 and 4, construct a network of logic gates for each expression.

3. \((\text{NOT } p) \text{ AND } q\)

4. \(\text{NOT (NOT } p \text{ AND } q)\)

In Exercises 5–16, complete the input-output table for each network of logical gates.

<table>
<thead>
<tr>
<th></th>
<th>( p )</th>
<th>( q )</th>
<th>( \text{NOT } p )</th>
<th>( \text{NOT } q )</th>
<th>((\text{NOT } p) \text{ AND (NOT } q))</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
Answers

5. Indirect reasoning—reasoning from the negation of the consequent to the negation of the premise.

6. Not indirect reasoning. This is the form of argument called denying the premise, which is not valid.

7. Suppose there is another point $Y$ and $l$ such that $\overline{PY} \perp l$. Then $PXY$ is a triangle that has two right angles in it. But this is impossible. It contradicts the fact that the sum of the measures of the angles of a triangle is $180^\circ$. Therefore the assumption was false and there is only one line through Point $P$ that is perpendicular to $l$.

Lesson 12.5
Level A

1. Not $p$ and $q$

2. Not ($p$ or $q$)

3. $p$ \[ \rightarrow \] $q$

4. $p$ \[ \rightarrow \] $q$

5. 0, 0

6. 0, 0

7. 1, 1

8. 1, 0

9. 1, 1

10. 1, 1

11. 1, 1

12. 1, 1

13. 1, 1

14. 1, 1

15. 0, 1

16. 0, 0

Lesson 12.5
Level B

1. $p$ or Not $q$

2. Not ($p$ and not $q$)

3. $p$ \[ \rightarrow \] $q$

4. $p$ \[ \rightarrow \] $q$

5. 0, 0, 0

6. 0, 1, 0

7. 1, 0, 0

8. 1, 1, 1

9. 1, 0, 0

10. 1, 1, 1

11. 1, 0, 0

12. 1, 1, 1

13. 1, 0, 0

14. 1, 1, 1

15. 0, 0, 0

16. 0, 1, 0
1. How many sequences of 1s and 0s are possible as outputs of a four-line input-output table?

The input-output tables for the three basic logic gates are as follows: Use these tables for Exercises 2–15.

<table>
<thead>
<tr>
<th></th>
<th>NOT p</th>
<th></th>
<th></th>
<th>OR q</th>
<th></th>
<th></th>
<th>AND q</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
<td>1</td>
<td>0</td>
<td>1</td>
<td>1</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>0</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>0</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>

In Exercises 2–5, create a network of logic gates that corresponds to each input-output table.

<p>| | | | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>2.</td>
<td>p</td>
<td>q</td>
<td>???</td>
<td>1</td>
<td>1</td>
<td>0</td>
<td></td>
</tr>
<tr>
<td>3.</td>
<td>p</td>
<td>q</td>
<td>???</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>4.</td>
<td>p</td>
<td>q</td>
<td>???</td>
<td>1</td>
<td>0</td>
<td>0</td>
<td></td>
</tr>
<tr>
<td>5.</td>
<td>p</td>
<td>q</td>
<td>???</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

For Exercises 6–15, list the other ten possible four-line input-output tables.

<p>| | | | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>6.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>9.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<p>| | | | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>10.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>11.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>12.</td>
<td>p</td>
<td>q</td>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>13.</td>

</tbody>
</table>

Lesson 12.5
Level C

1. \(2^4\), or 16

In Exercise 2–15, there may be more than one answer possible due to the logical equivalence of different expressions. One or two sample answers will be given, but other likely possibilities that students may think of should be checked.

2. \(\neg(p \lor q)\). Also \((\neg p) \land (\neg q)\)

3. \((\neg p) \lor q\) (Notice that this is equivalent to the truth table of "if \(p\), then \(q\)", or \(p \rightarrow q\))

4. \(\neg(p \lor q)\). Also \(p \land (\neg q)\)

5. \(p\); If students want a reference to \(q\) as well, they could form a conjunction with a statement that is always true—for example, \(p \land (q \lor \neg q)\).

For the answers to Exercises 6–15, the ten remaining truth table possibilities are listed in no particular order, with a possible logic gate for each. Again, these should be regarded as sample answers because logically equivalent statements are possibilities as well.

\[
\begin{array}{cccc}
0 & 0 & 1 & 0 \\
0 & 1 & 1 & 1 \\
1 & 1 & 0 & 1 \\
0 & 1 & 1 & 1 \\
0 & 1 & 0 & 1 \\
1 & 0 & 1 & 0 \\
0 & 1 & 0 & 1 \\
1 & 0 & 0 & 1 \\
0 & 1 & 1 & 0 \\
1 & 1 & 1 & 1 \\
0 & 0 & 0 & 0
\end{array}
\]

\(\neg p \land q\)

\(\neg (p \land q)\)

\(\neg (\neg p \land \neg q)\). Also \(p \lor \neg q\)

\(\neg p\)

\(q\)

\(\neg q\)

\((p \lor \neg q) \land (q \lor \neg p)\)

\((\neg p \land q) \lor (\neg q \land p)\)

\(p \lor (\neg p)\)

\(p \land (\neg p)\)
